

How to share wifi password on iPhone

How to share wifi password on iPhone. On iOS, there is a great feature that is sharing Wifi password among iOS devices together and we do not need to enter passwords manually, especially with passwords with special characters or passwords. long.

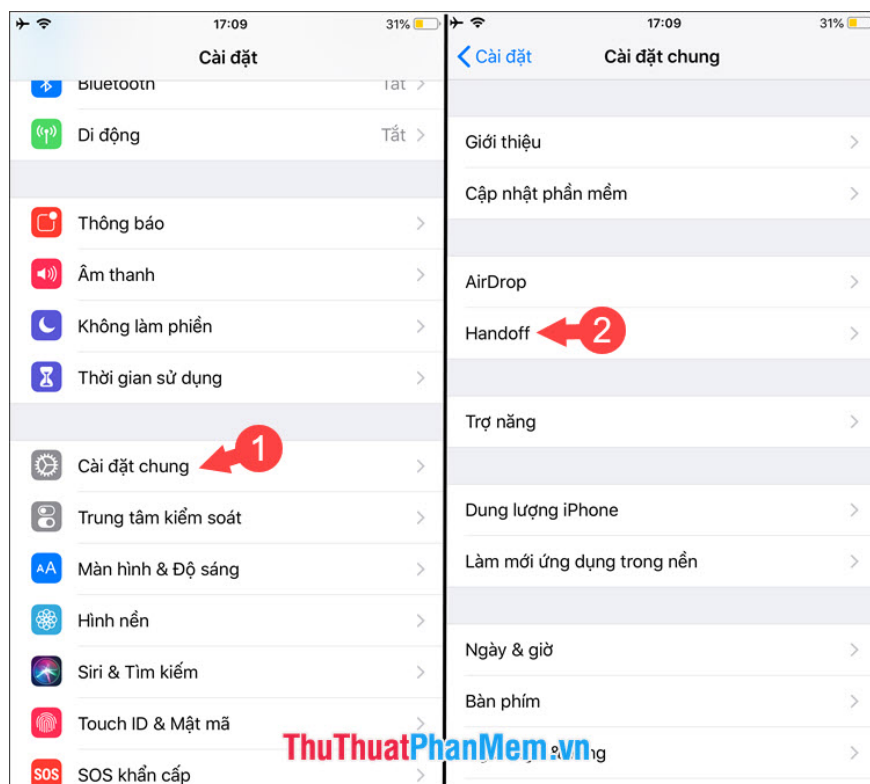

On iOS operating system, there is a great feature that is sharing Wifi password among iOS devices together and we do not need to enter passwords manually, especially with passwords with special characters or passwords. long.

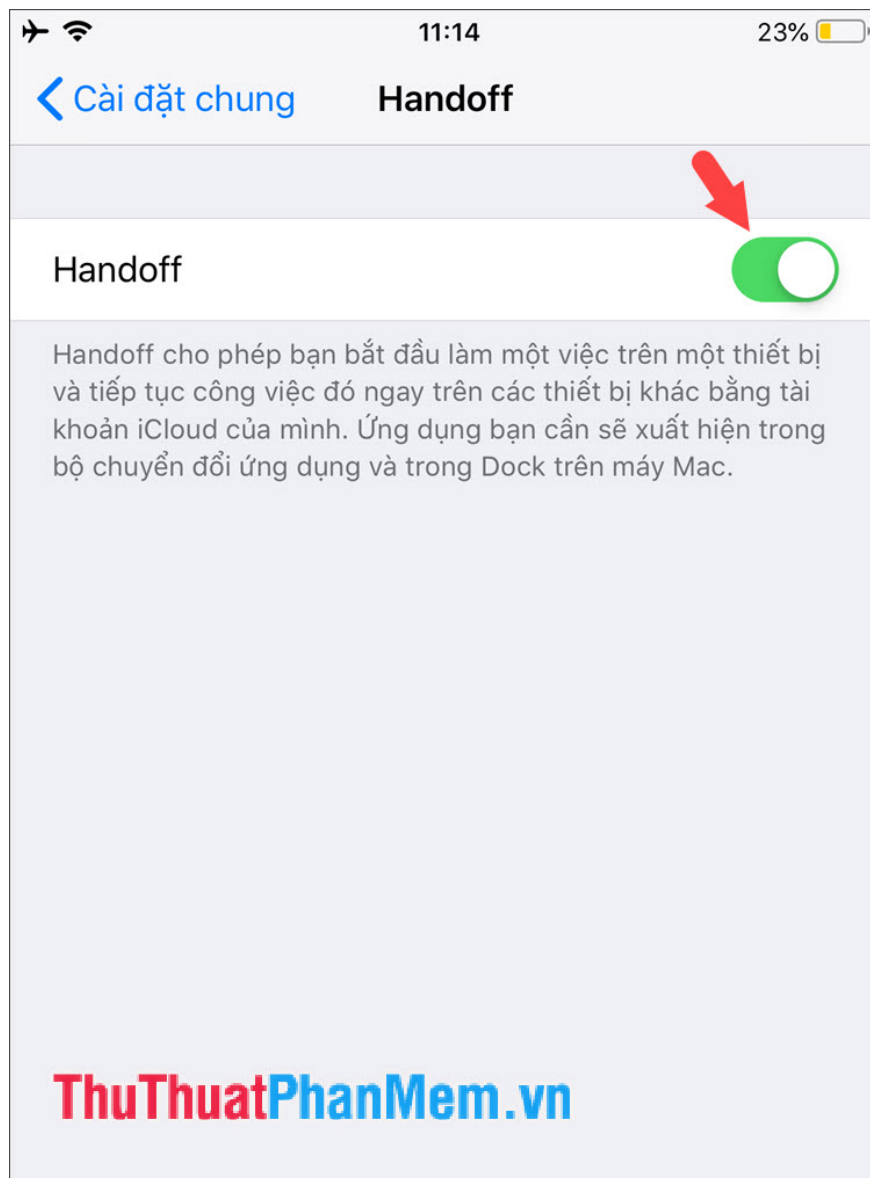

1. Enable Handoff and save contacts

To share the password on the iPhone, we need to turn on the Handoff feature on both machines. Please do the following:

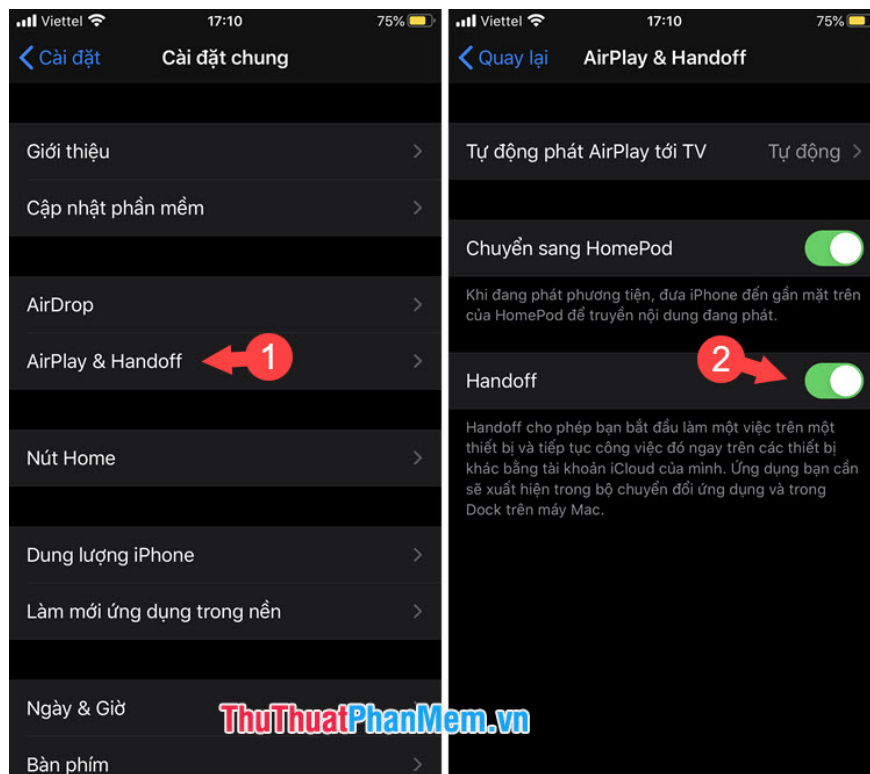

Step 1: Go to **Settings** => **General settings (1)** => **Handoff (2)** .

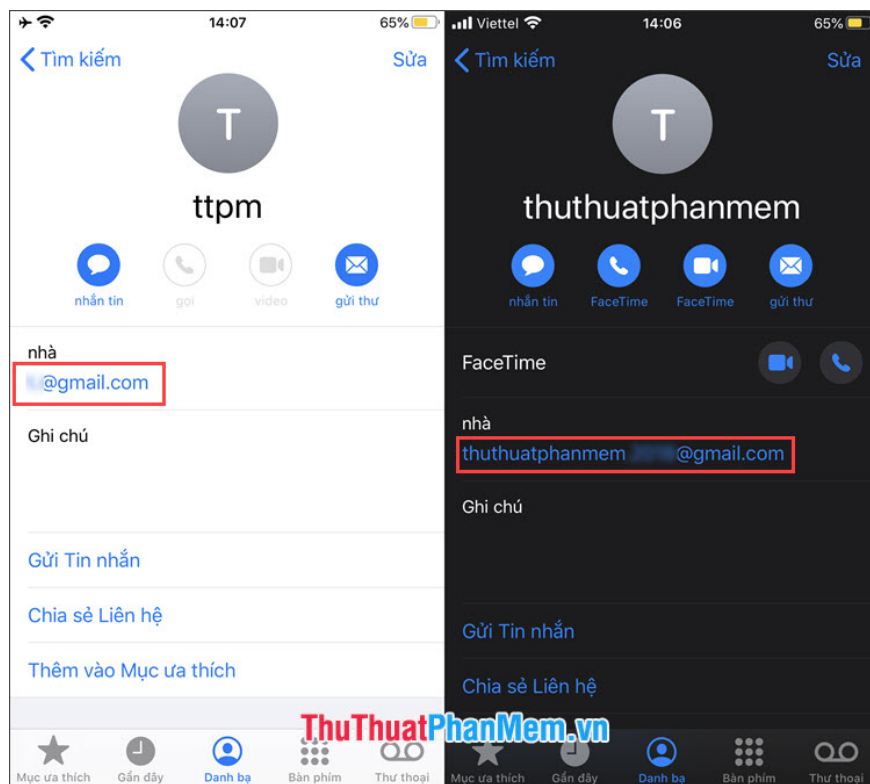

Step 2: You turn **Handoff** switch to turn it on.

On iOS 13 and above: To activate Handoff on iOS 13, you still go to **Settings** => **General settings** but then you choose **Airplay & Handoff (1)** => **Handoff (2)** .

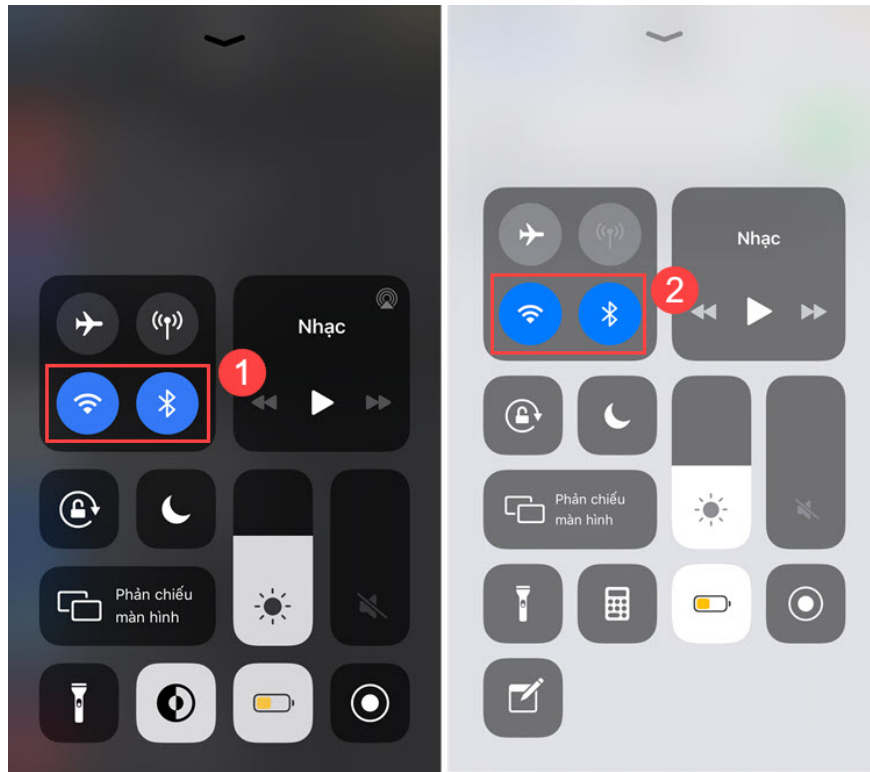

Step 3: You need to save each other's contacts using iCloud email address for this feature to work. Please open the contacts and create new contacts to save each other's email addresses. **Note:** If two computers share an iCloud account, you can skip this step.

2. Share wifi on iPhone with Handoff

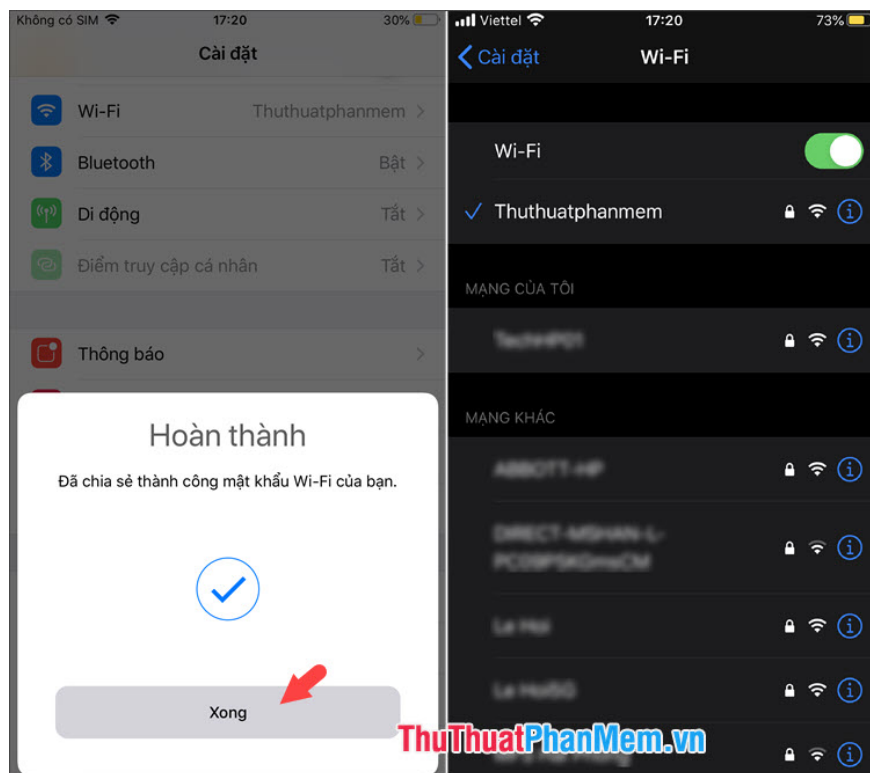

Step 1: Swipe up from the bottom of the screen to open the Control Center. Next, you touch the Wifi and Bluetooth buttons on both (1) and (2) .

Step 2: Go back to the device (1) to find and enter the Wifi password. At this time on the machine (2) will have the message **Share password** . You touch that item to share Wifi password to the other device.

After the device (2) has the message **Complete** , the machine (1) has successfully connected to Wifi as shown below. On your device (2) , tap **Done** to turn off that notification.
