

# How to share Wi-Fi password using QR code in Windows 11

This guide will show you how to create a QR code to easily share your Windows 11 PC's Wi-Fi connection with other devices.

Wi-Fi is a wireless local area network (WLAN) technology and standard that uses high-frequency radio waves to provide wireless Internet and network connectivity to Windows devices.

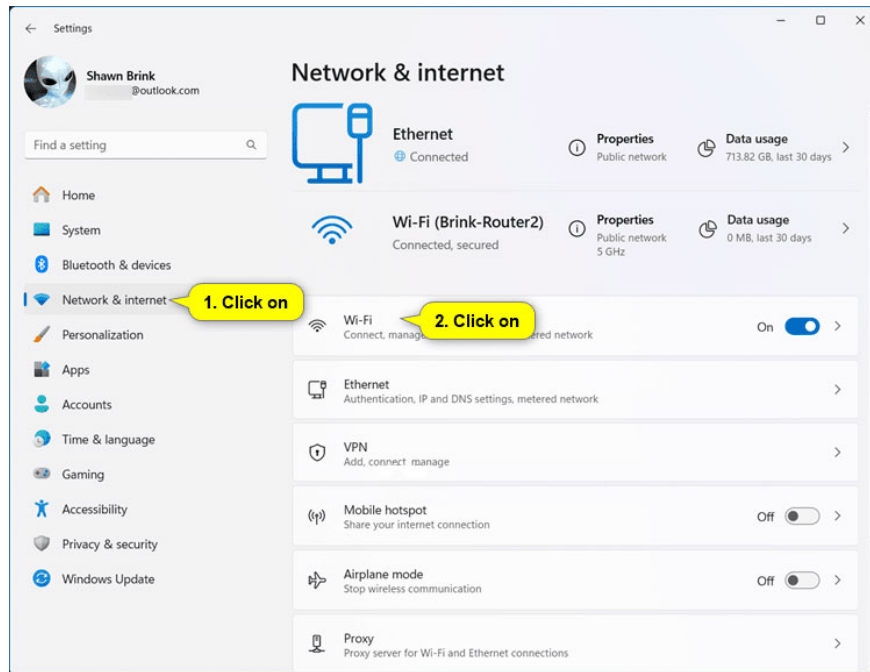

When connecting to a Wi-Fi network for the first time, Windows automatically adds configuration to the Wi-Fi network. The saved profile contains the SSID (network name), security key (password), and security and connection properties used to connect to this specific Wi-Fi network.

Starting with Windows 11 version 24H2, QR codes are now available in Wi-Fi settings to help you easily share with others to connect. This guide will show you how to create a QR code to easily share your Windows 11 PC's Wi-Fi connection with other devices.

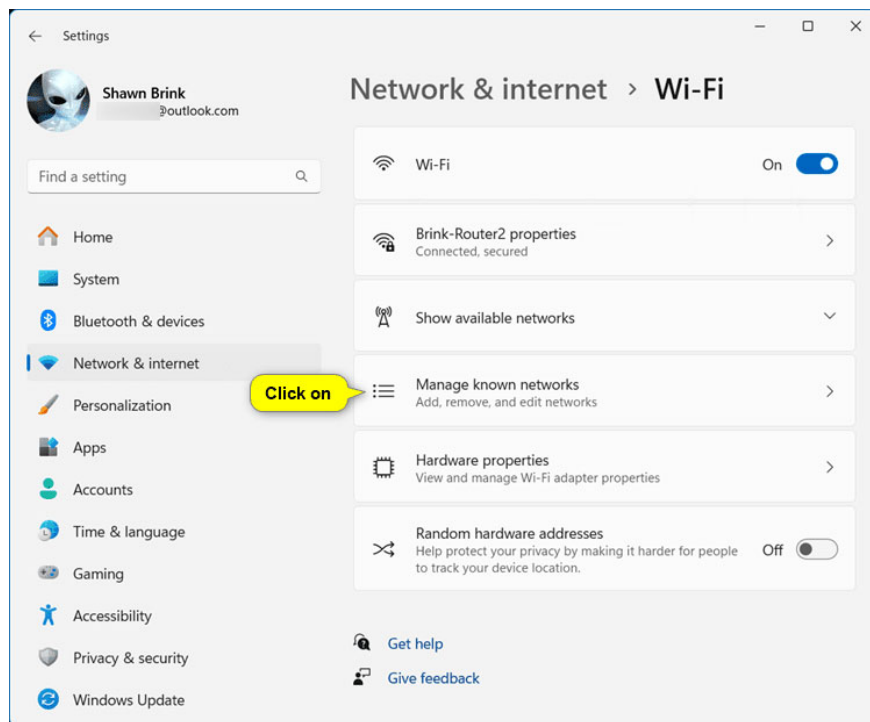

## How to share Wi-Fi password using QR code in Windows 11

Here's how:

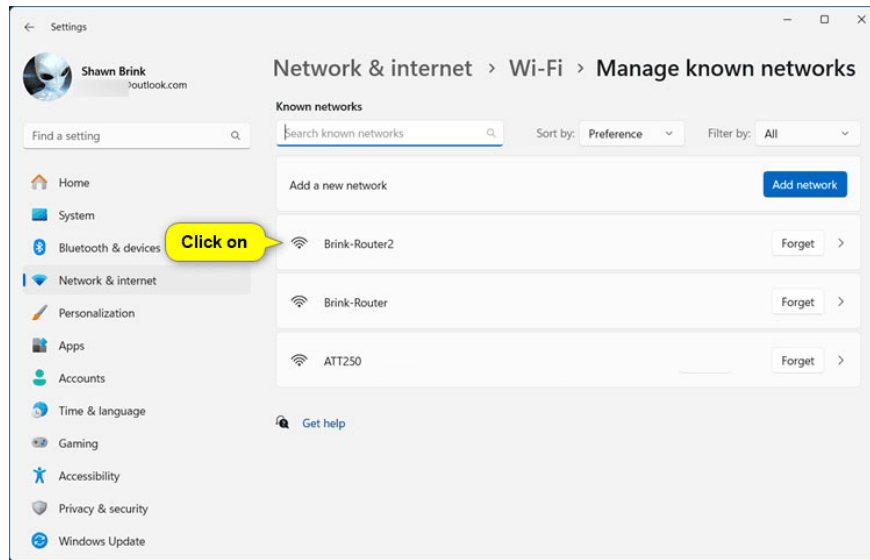

1. Open Settings ( **Win + I** ).
2. Click **Network & internet** on the left side and tap **Wi-Fi** on the right side.

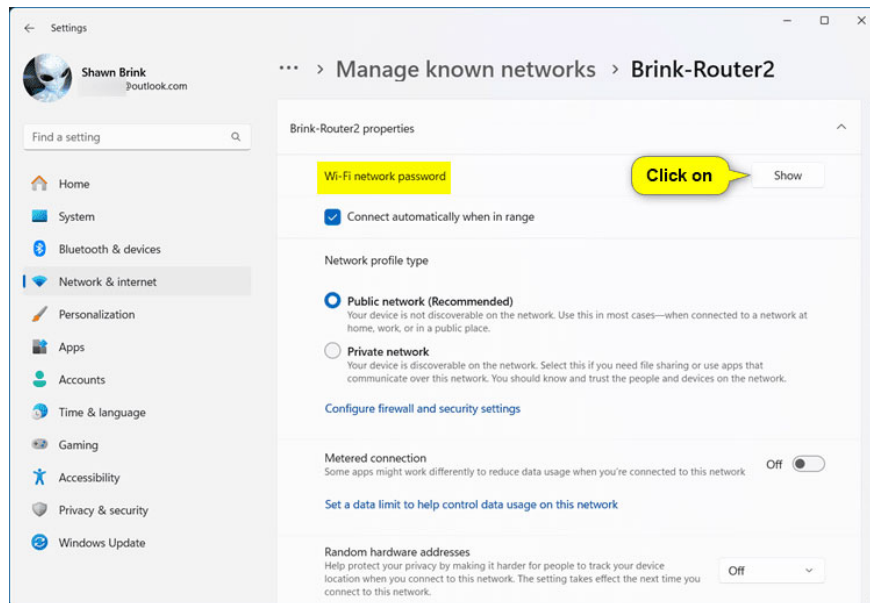

3. Click **Manage known networks** on the right.

4. Click on the known Wi-Fi network (for example, "Brink-Router2") for which you want a QR code.

5. Click the **Show** button to the right of the Wi-Fi network password.

6. Open the Camera app on another device, scan the QR code, and follow any given steps to connect to this Wi-Fi network.

**Note :** You can also use any QR code scanning app.

All operations completed! Hope you are succesful.
