

# How to show and hide files in Windows 10

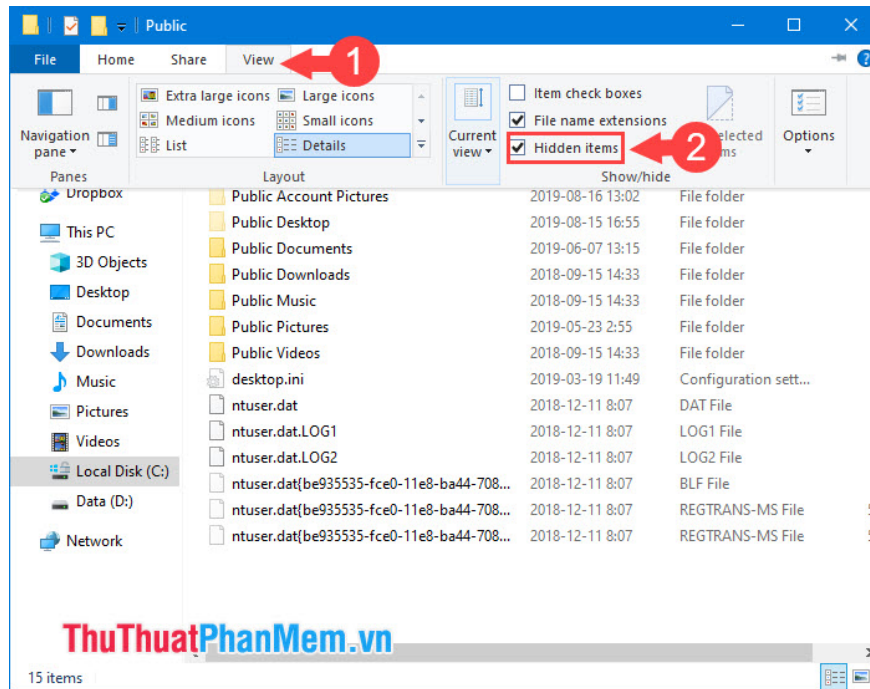

How to show and hide files in Windows 10. Show and hide files is a feature available on Windows that helps the system protect important files not displayed and can accidentally be accidentally deleted by the user. If you do not know how to turn on and off the feature of hiding and hiding files on Windows 10, let's find out how to perform through the following article.

Show and hide files is a feature available on Windows that helps the system protect important files from being displayed and can accidentally be deleted by the user. If you do not know how to turn on and off the feature of hiding and hiding files on Windows 10, let's find out how to perform through the following article.

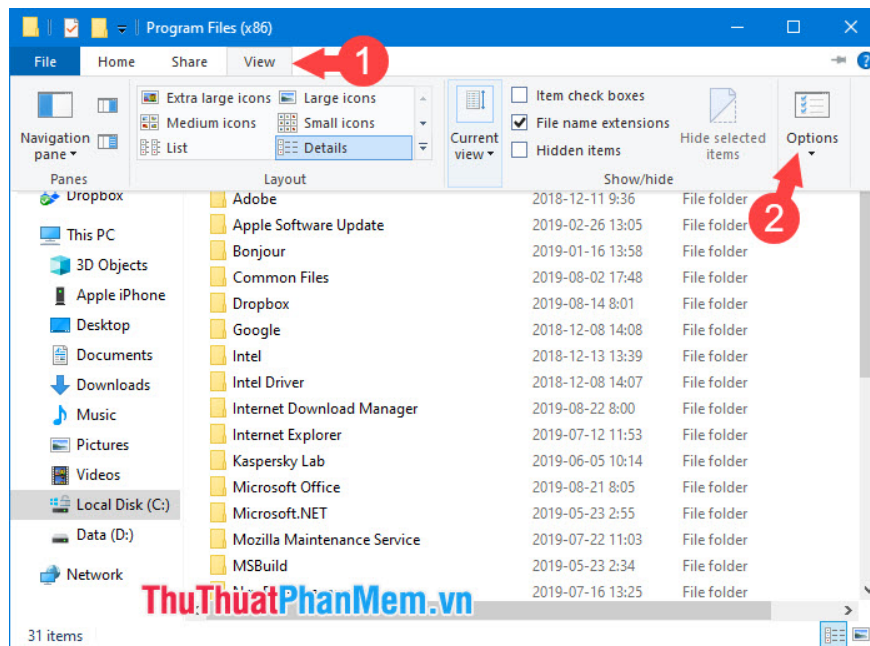

## Method 1: Show files, hide files on Windows 10 via the View option.

First, we open **This PC** or pressing **Windows + E** . Then click on **View (1)** => check **Hidden items (2)** to show and uncheck to hide files.

## Method 2: Show files, hide files in Folder Options

**Step 1:** We open **This PC** or use the key combination **Windows + E** . Then you go to **View (1) => Options (2)** .

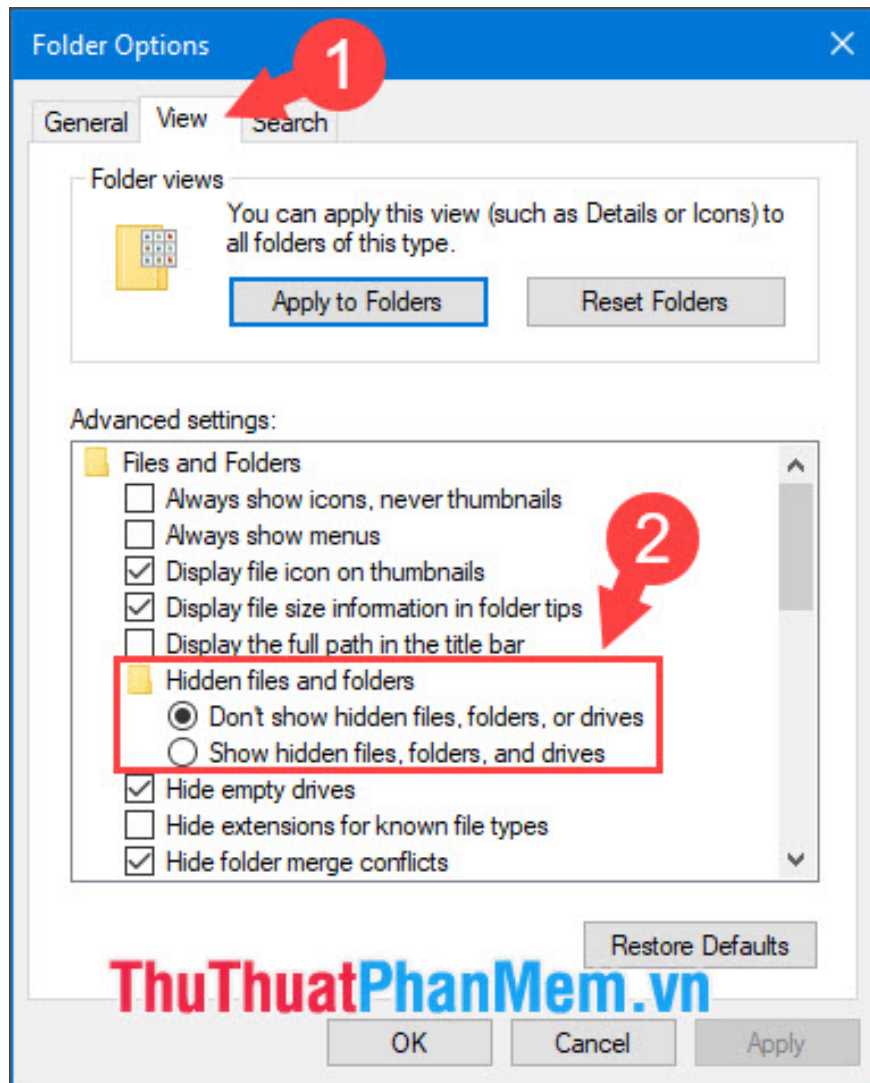

**Step 2:** Next, go to **View (1)** and navigate to **Hidden files and folders (2)** select one of the following two options.

- **Don't show hidden files, folders, or drives:** Hide files, folders or drives.

- **Show hidden files, folders, and drives:** Show files, folders or drives.

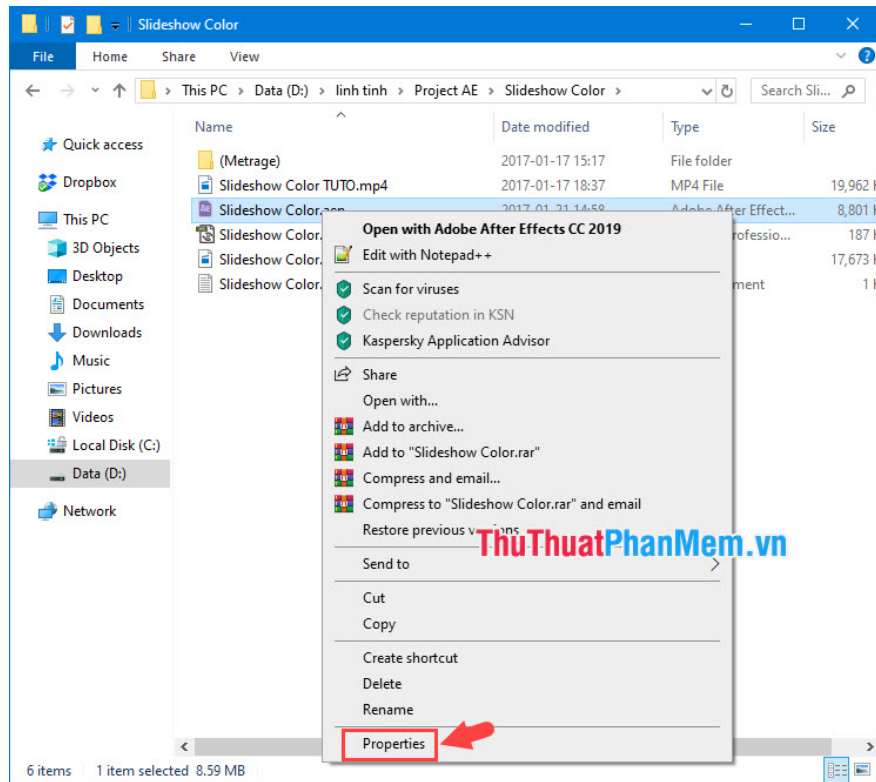

Then, click **Apply** and **OK** to save the above settings.

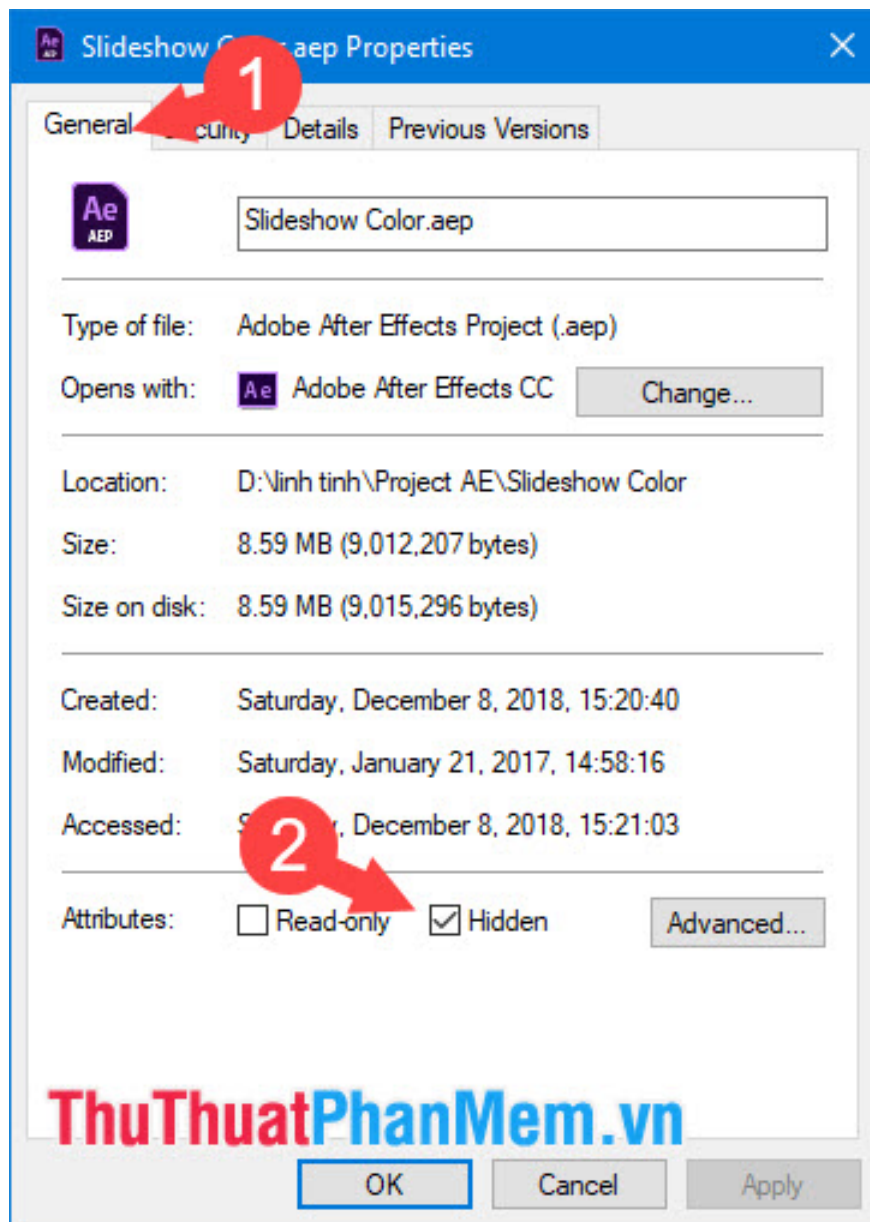

### Method 3: Remove hidden properties of files and folders

After you use one of the two methods above, the hidden file will be visible for you to see, but it will look a bit blurry compared to the normal file, if you need to remove its hidden file attribute then follow the following way:

**Step 1:** Right-click the file or folder you want to unhide and select **Properties** .

**Step 2:** In the **General** tab (1) , you leave the check box under **Hidden** (2) to unhide the file completely. Then click **Apply** and **OK** to save the settings.

In addition, we also have a way to display files hidden by viruses by **Fixattrb** software if the two ways in the article can not be done. Detailed instructions invite you to see at: <http://TipsMake.vn/download-fixattrb-phuc-hoi-hien-cac-file-bi-an-do-virus/>

Through the instructions to show and hide files in Windows, we can take advantage of this feature to hide and hide private data files from strangers. If the article is good and useful, please send your comments and comments to TipsMake.com in the comment section at the end of the article!
