

How to source and detail photos with Google

Google is a popular option whenever you need to find out information about a topic. You can also use this huge search engine to find any photo ever published online.

Google is a popular option whenever you need to find out information about a topic. In addition, you can also use this huge search engine to find any photo ever published online. But what if you already own a picture and want to have more information about its source?

Fortunately, Google provides a reverse-engineering method of image search to reveal details related to when and where an image was originally published, the content of the image. and any other details found online.

Find the source of a photo

1. Go to the **Google Image** search page .
2. Click the **Camera** icon which you can find at the right end of the search bar. A new search bar appears. You will find 2 options. Either option can be used to select the image you want to source:
 1. **Paste image URL** : Use this option when searching images found online.

If you find an image on a specific website, you can open the image in a new tab by visiting the website, right-clicking on the image and from the drop-down menu that appears, selecting the '**Open image**' option. **in new tab** ' .

Once the image is opened in a new page, copy the URL of the page and paste it into the image search bar in the '**Paste image URL**' option and press Enter .

Google will analyze images to identify all data available in relation to previous appearances on the Internet.

1. **Upload an image** : Use this option when searching for images saved on your device.

Search by image

Search Google with an image instead of text. Try dragging an image here.

Paste image URL **Upload an image** 

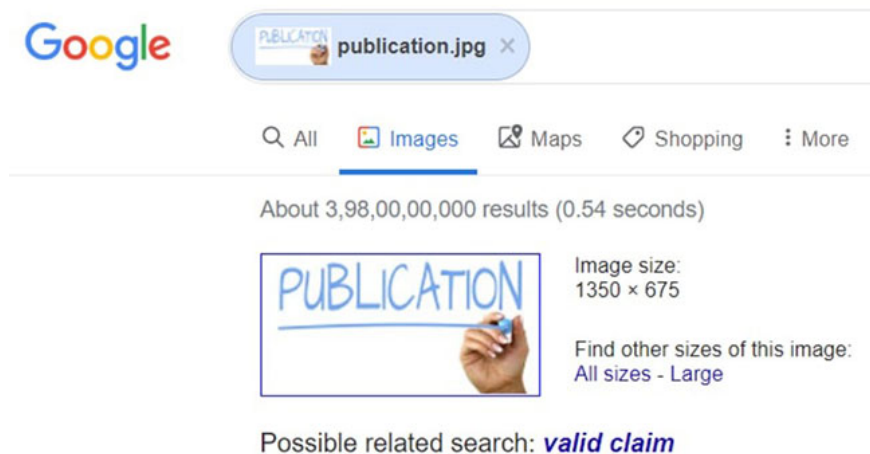

No file chosen

Simply select the '**Choose File**' tab displayed under the option. You will be redirected to the location to save the file on your device. Go to the directory containing the image you want to run the search and upload it to Google by clicking on the image.

Once the image has been uploaded, the search will start automatically and in a few seconds, Google will show you search results related to the image you have uploaded.

Refine results

No matter which option you use to run image search, you can refine the results that Google displays. Click the size and resolution from a series of images similar to the one you're looking for, so you can view the same image in a variety of sizes, from small to large.

In addition, Google will suggest a title that can be highlighted in blue for the content of the image. It will describe the original content or title of the image. You can click this suggestion to run a text search with Google for the newly discovered image source.

Finally, if you need to run image search regularly, you can install the Search by Image extension available for Chrome. Using this extension, you can run image source search just by selecting images in Chrome, then right-clicking and selecting this feature with your mouse.

You can also add this feature to the Chrome extension bar and click it to add the URL of the image or upload it to the image, then run a search to find its source information.

With so many interesting images appearing on the Internet, Google's image search option is a useful tool to track the source of images or simply find out more details about the content of an image. there.

Hope you are succesful.
