Step 1:

Download and install **Fraps software** on your computer, then perform FPS measurement for FIFA Online 4. This is a software that can capture video or take a screenshot of the game screen, and can measure FPS frame rate.

1. Download the software Fraps Windows

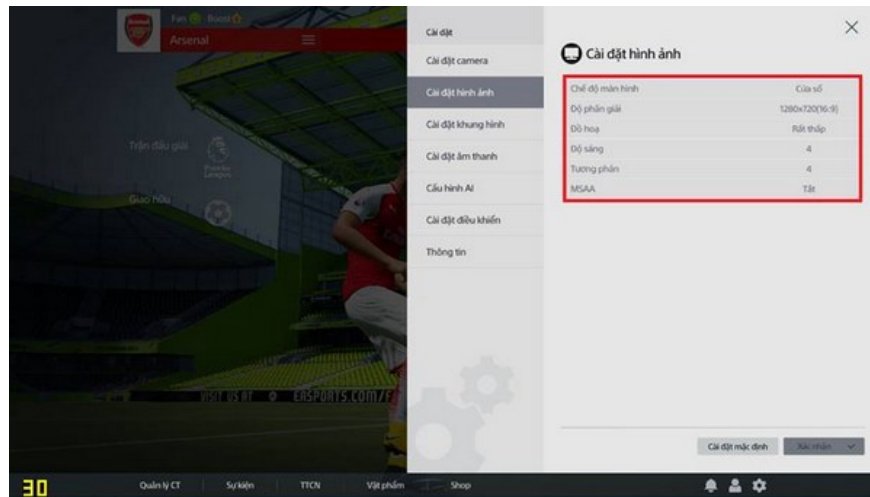

1. 4 ways to measure FPS frame rate (Frame Per Second) in PC game
2. How to capture and record video games with Fraps software

Step 2:

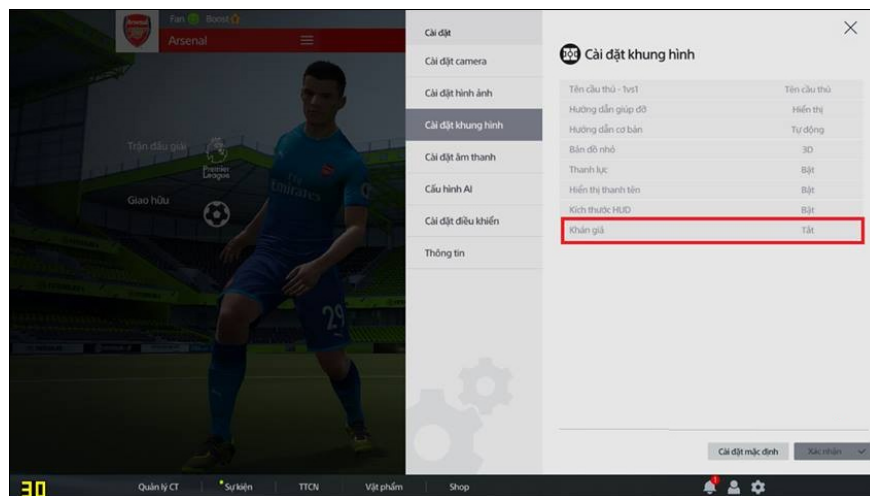

If the computer does not have a high profile, it is necessary to lower the configuration of FIFA Online 4 to the maximum. Go to **Settings**, choose Next **Picture settings** to change some customizations.

1. Screen mode: Window.
2. Resolution: Tweak 1280 x 720 (16: 9).
3. MSAA: Off.
4. Graphics: Very low.
5. Audience: Off.

Step 3:

Keep using Fraps software to measure how much FPS is still available after customizing the above parameters. If the test result is about 30 FPS, there will be no jerky or lag phenomenon.

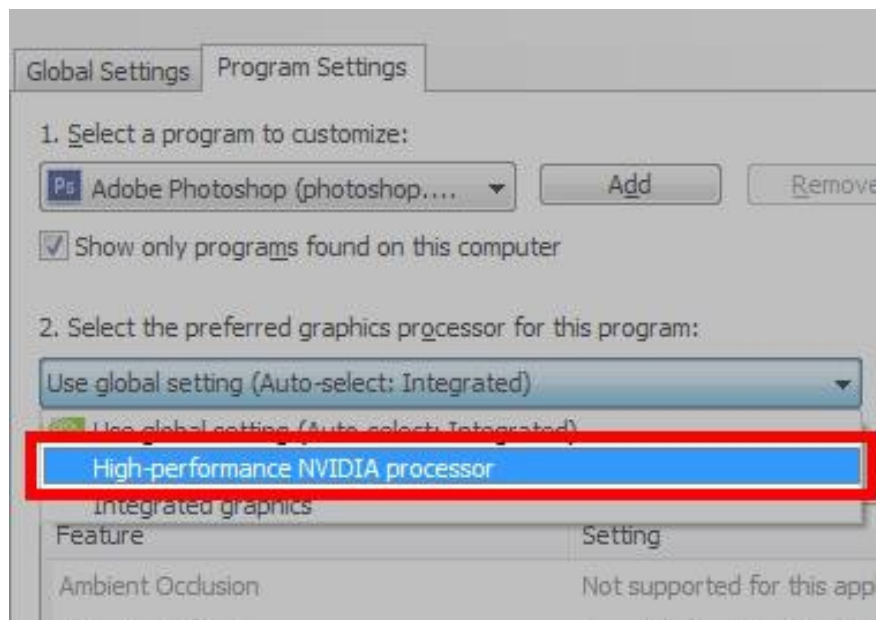

In case the player wants to **increase FPS for the machine**, adjust in Windows as below.

1. Power Options / High Performance.
2. Maximum processor state / 100% Plugged in + On Battery.
3. Set priority / High.
4. Turn off all other applications, applications running in the background.
5. Turn off superfetch to prevent error 100% memory, install virtual RAM.

In addition, gamers can also **adjust NVIDIA cards**.

1. Intergrated Graphics tweaks to High-Performance NVIDA processor
2. Adjust Settings to High / Maximum Performance

1. How to update the driver for NVIDIA video card

With these fundamental changes, FIFA Online 4 players will limit frame shock or lag, with those that have weak configuration or enough configuration to recommend installation but still have problems when experiencing.
