Instructions for speeding up Speed ??Dial on Opera

The interface of Speed ??Dial on Opera browser is as shown below. Each Speed ??Dial is a new tab in another browser.

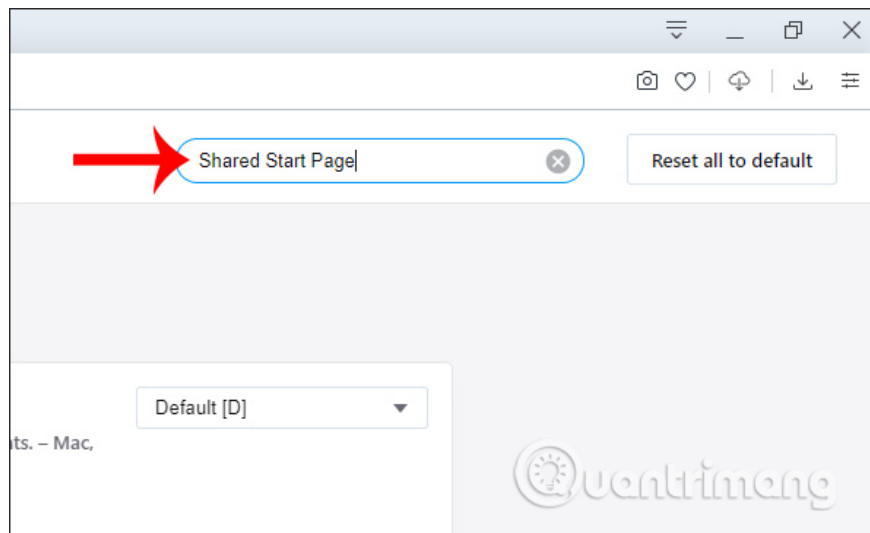

Step 1:

In the browser interface, enter the keyword **opera: // flags** in the address bar and press Enter to access the Opera flags interface.

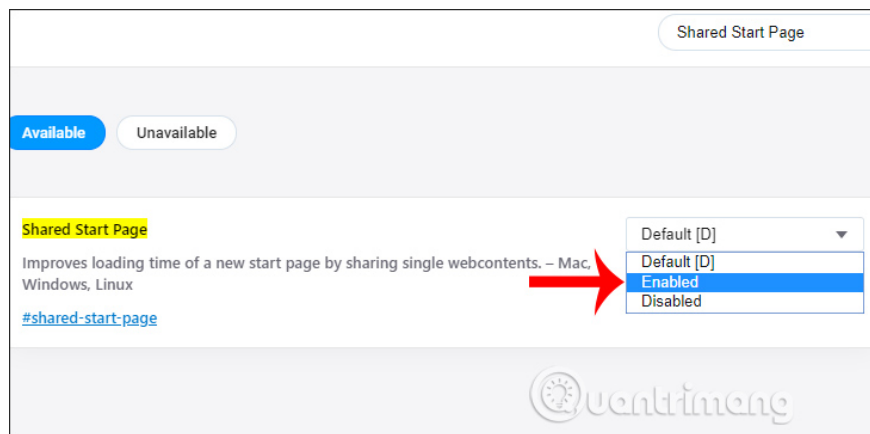

Step 2:

Display the new interface by entering **the Shared Start Page keyword** into the Search Flags bar to find this flag.

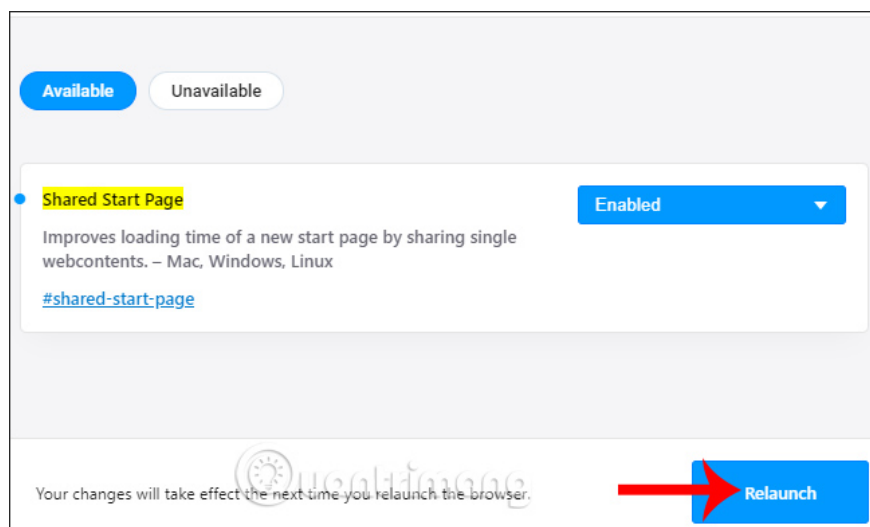

Step 3:

As a result, we found that flag, **switch from Default mode to Enabled mode** to enable this flag to operate Opera browser.

Then **click Relaunch** to restart the browser and the feature is applied on the browser. Finally we open the Opera browser and we will see a significant improvement in Speed ??Dial performance on the browser.

So just change the features available on Opera with a simple way that Speed ??Dial interface is launched quickly, improving speed significantly. Note that this feature is only available from Opera 65 and above and is still in beta.
