

How to speed up your computer using CCleaner: Simple and effective methods.

Slow and frozen computers often stem from excessive junk files, cached data, or background applications. Therefore, speed up your computer with CCleaner to improve your PC's performance.

CCleaner is a system cleaning tool that scans and finds junk files, uninstalls software, and deletes duplicate files to ensure your device's stability. Thanks to these features, many users have **installed** and used CCleaner to improve their PC's performance. But do you know how to speed up your computer using CCleaner? Check out this article to improve your computer's performance.

Guide to speeding up your PC with CCleaner super fast.

How to speed up your computer easily and effectively using CCleaner.

Download or update to the latest version of CCleaner using the link below:

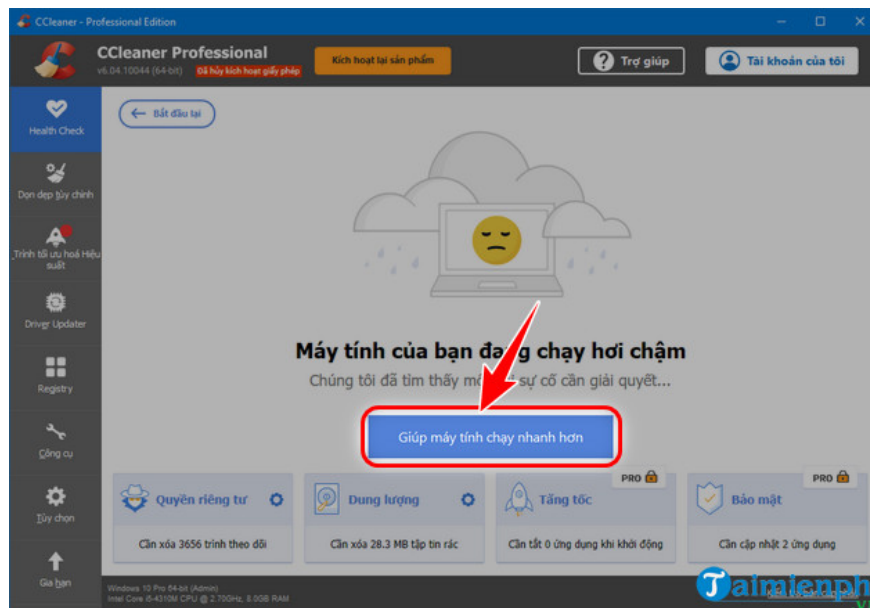

- Download the latest **CCleaner** [here](#).

This is a feature that CCleaner has recently added to its software to quickly analyze your computer's status, then automatically adjust and update it to make it faster and safer.

Step 1: Select **Healthy Check** mode => Press **Start** to have CCleaner begin scanning.

Step 2: Click on **Help your computer run faster.**

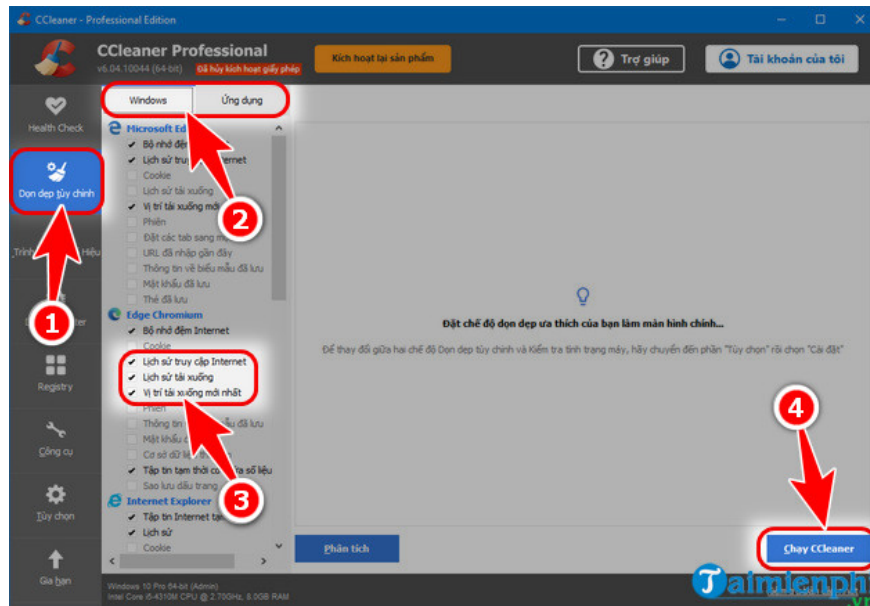

This feature allows you to customize the deletion of browser and Windows files and data according to your needs.

Step 1: Select **Custom Cleanup** => Choose **Windows** or **Applications**.

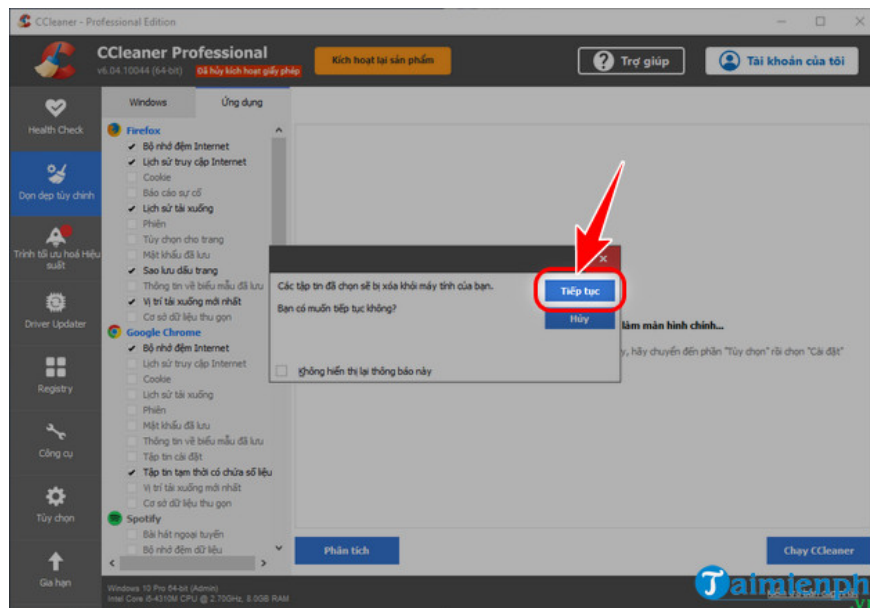

Step 2: Check **the boxes next to the items** you want to delete.

- Taimienphi recommends only deleting **browser cache** or **browsing history** and not cookies.

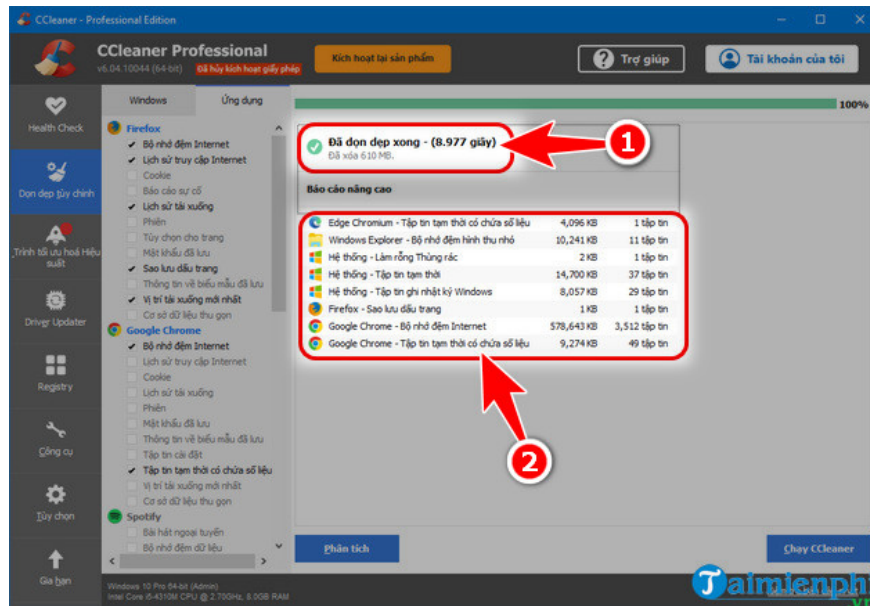

Step 3: Click **Run CCleaner**.

Step 4: Click **Continue**.

- After the cleanup is complete, CCleaner will display the real-time time taken, the amount of files deleted, and details of the number and size of files from each application.

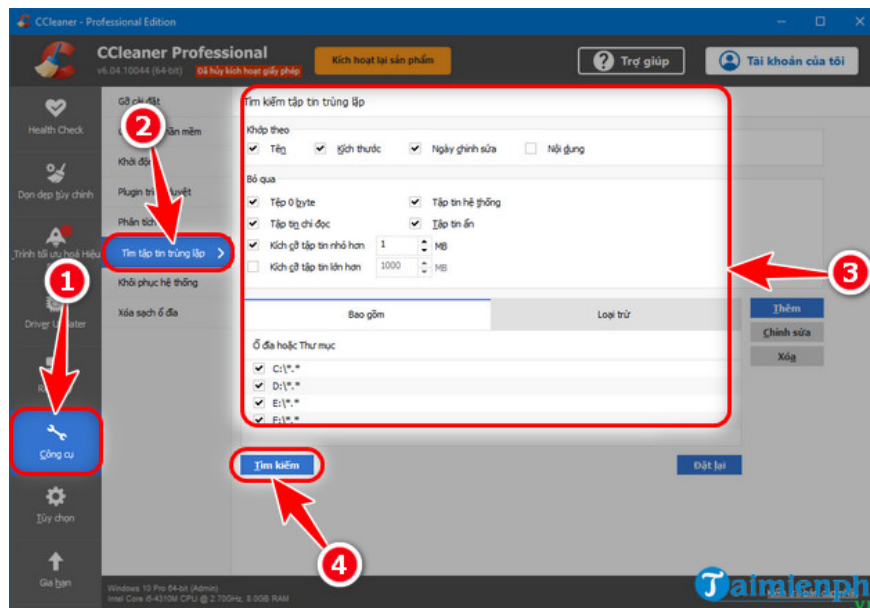

CCleaner will scan and find duplicate files on your drive so you can quickly delete unnecessary duplicate files.

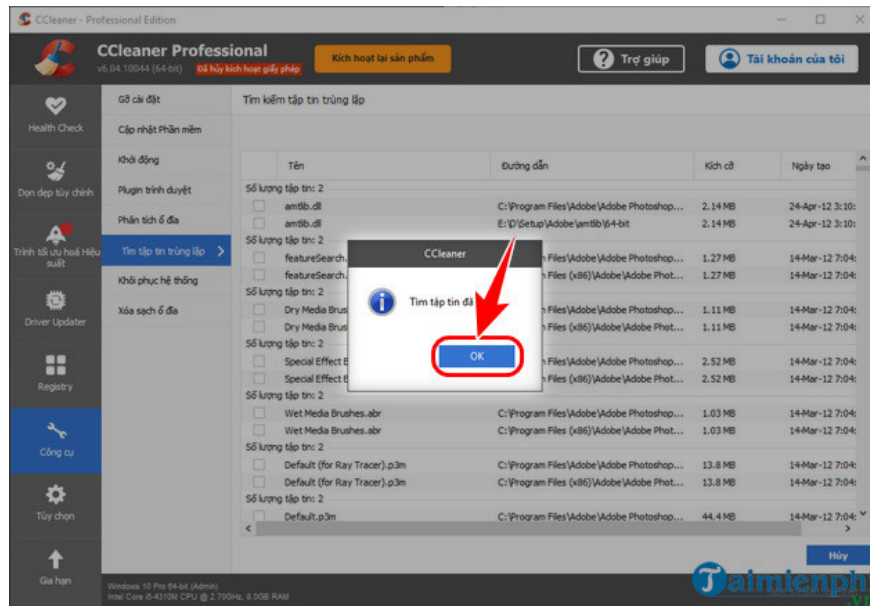

Step 1: Go to **Tools** => Click on **Find Duplicate Files**.

Step 2: Set the appropriate options.

Step 3: Click **Search** and wait for CCleaner to scan.

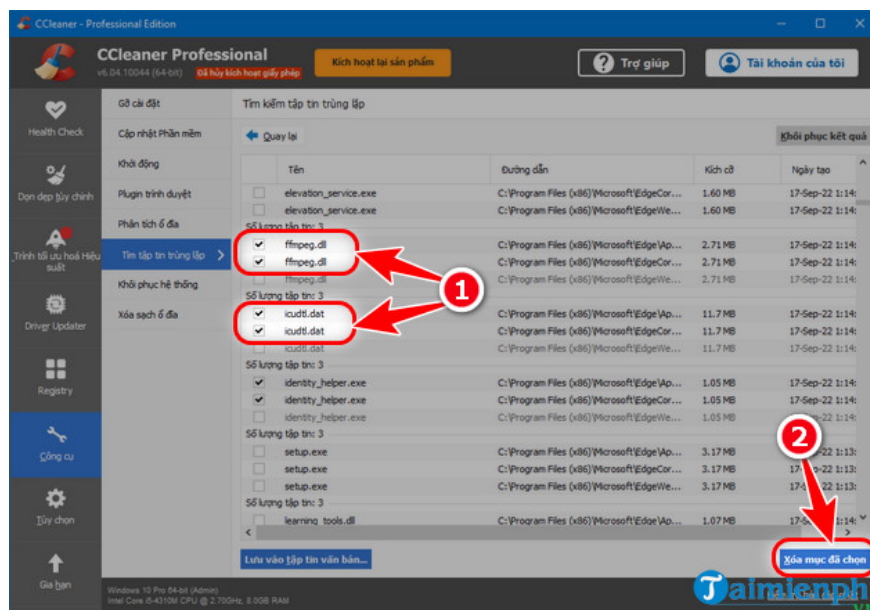

Step 4: Press **OK** to confirm .

Step 5: Select the duplicate files you want to delete => Click **Delete selected items** .

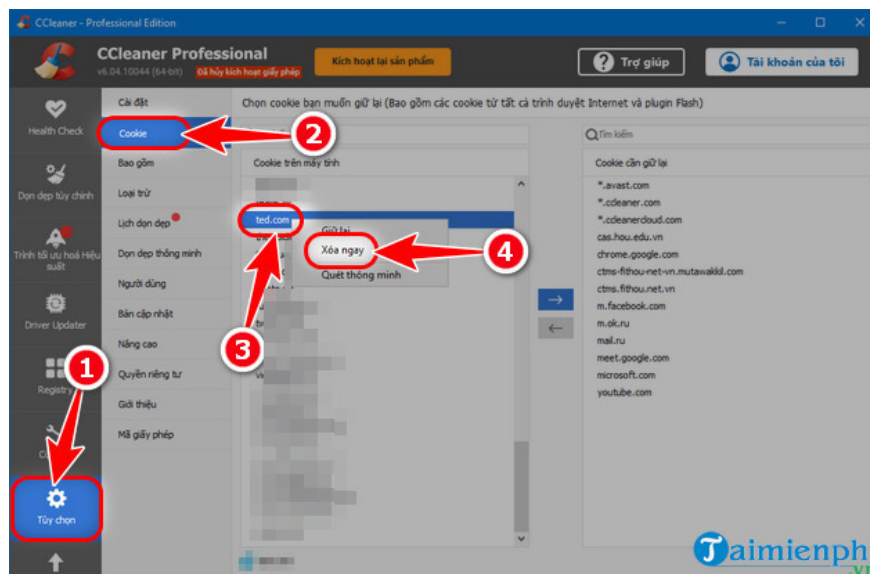

Step 6: Click **OK**.

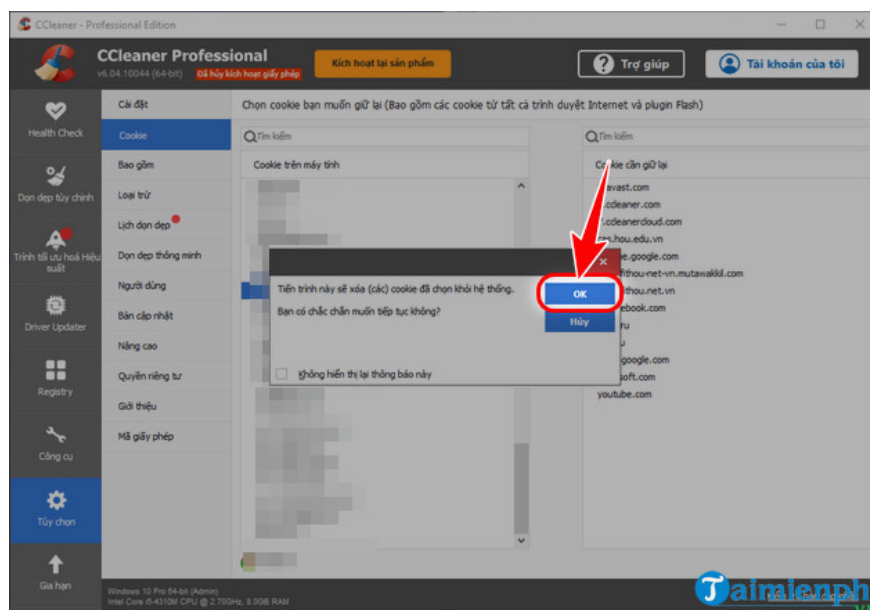

Step 1 : Click **Options** => Go to **Cookies**.

Step 2: Right-click on **the cookie** you want to delete => Select **Delete Now**.

- You should carefully review cookies to avoid deleting important data and to retain cookies that are on the list of **cookies to keep** .

Step 3: Press **OK** to confirm the deletion.

After speeding up your computer with CCleaner, you'll notice a significant improvement in its performance. This will boost your work efficiency many times over. You can now **install and use CCleaner on your phone**, specifically the version designed for mobile operating systems.
