

How to Speed ??Up uTorrent

If you know a bit about torrents, you probably already know how to find torrent files, download them, and load them into uTorrent. However, if you're new to this, the download speed can be quite slow. To speed up uTorrent, you need to check some parameters such as number of 'seeds', wi-fi interference, current uTorrent version, priority setting and speed. Alternatively, if downloads are still slow, you can also 'hot start' the torrent.

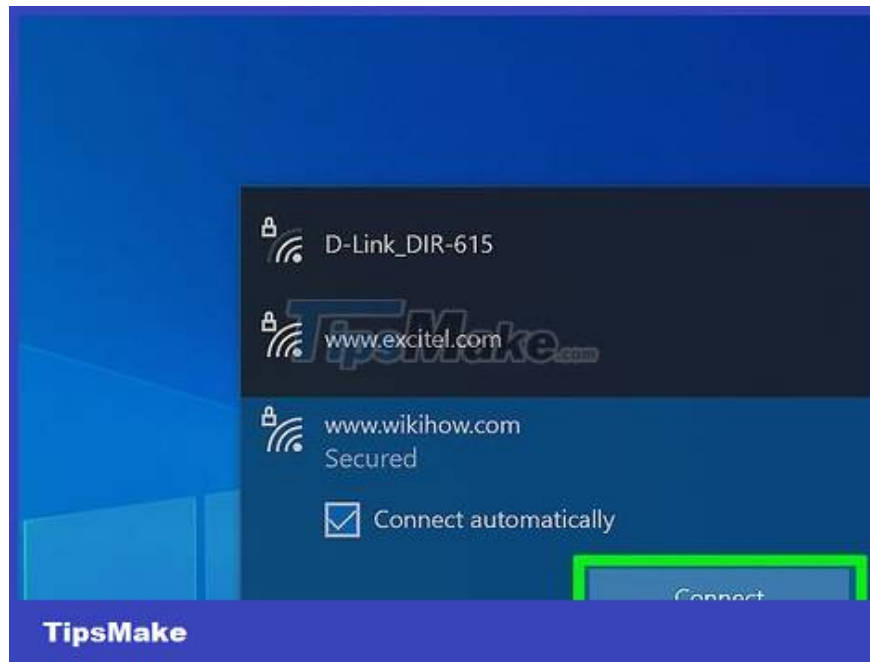

How many "seeds" are there out there?

	se	le	time	size	uploader
	766	275	6:07am	276.3 MB	mazemaze16
	466	324	12:17am	1.3 GB	mazemaze16
1	319	59	2:20am	242.4 MB	mazemaze16
3	388	140	5:58am	889.7 MB	mazemaze16
	226	78	6:07am	218.8 MB	mazemaze16
2	178	520	5:48am	6.7 GB	SCSA420
	265	51	2:25am	311.7 MB	mazemaze16
	123	11	6:23am	372.1 MB	mazemaze16
5.1 ...	18	46	7pm Feb. 7th	165.7 GB	QxR
	640	102	6:31am	408.2 MB	prudence25
☆	146	31	5pm Feb. 7th	2.1 GB	mazemaze16
	35	8	5pm Feb. 7th	206.7 MB	mazemaze16
1	19	48	8pm Feb. 7th	14.8 GB	samson599
	27	7	4pm Feb. 7th	785.7 MB	mazemaze16

Check the 'seed' number for your torrent file. 'Seed' are people who continue to share files after they have been downloaded. The more 'seeds' a file has, the higher its download speed will be.

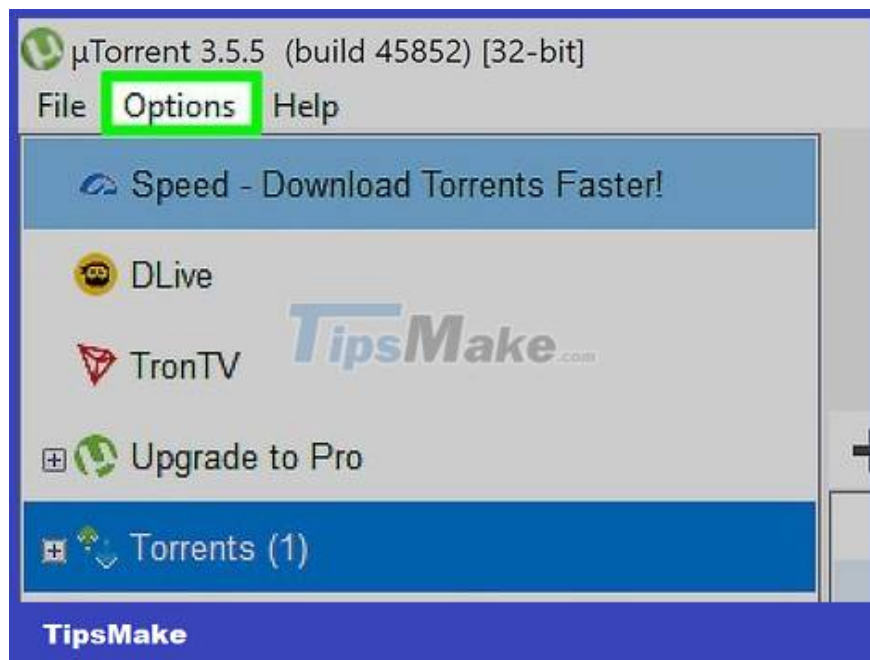

If possible, download from a source that has multiple 'seeds' for the file you want to download. Once connected with enough 'seed', you can easily reach the maximum connection speed. However, this is more risky when you try to download movies and music. Learn how to choose reputable torrent sources because many are not necessarily good.

Is your Wi-fi noisy?

Try connecting the computer directly to the modem or the navigator instead of using Wi-fi. Many signals in the house can interfere with your Wi-fi connection, thereby affecting the network speed as well as the download speed of uTorrent.

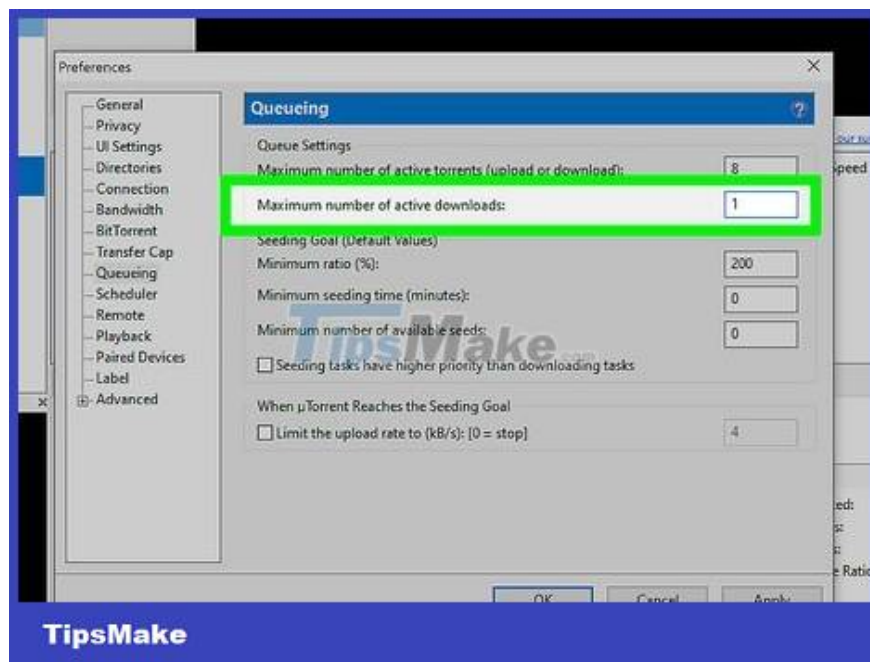

Have you used all your abilities?

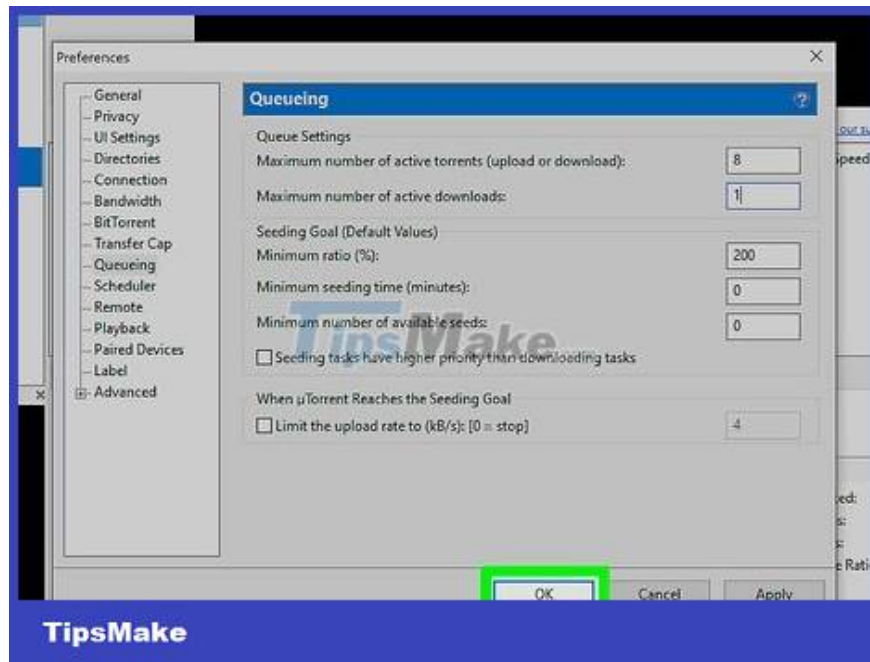

Check uTorrent's standby settings. Every file being downloaded in uTorrent takes up some of your bandwidth. The more files are loaded at full speed, the longer it takes to load. Watch while downloading: Enjoy the first movie while waiting for another to download.

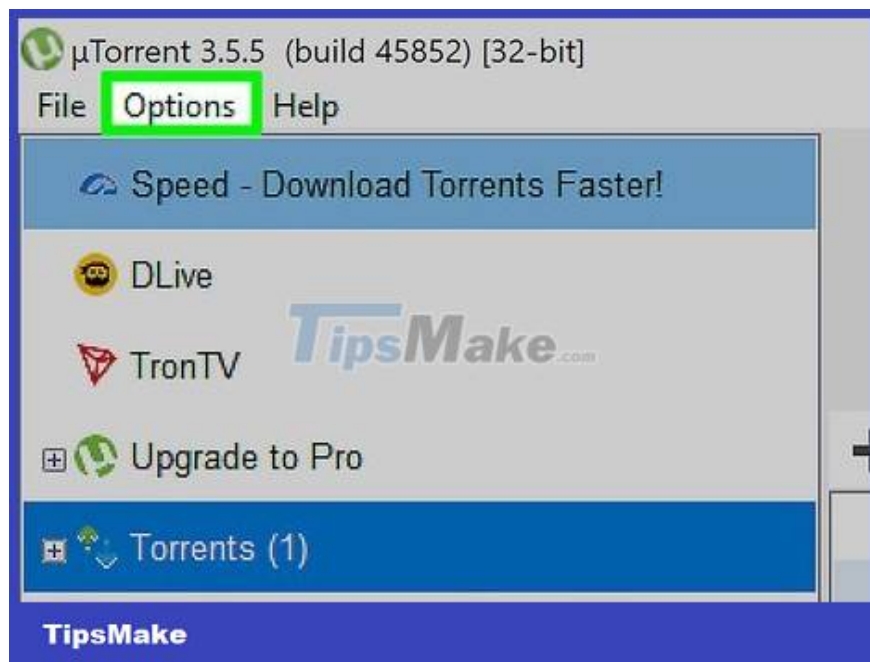

Click Options then Preferences.

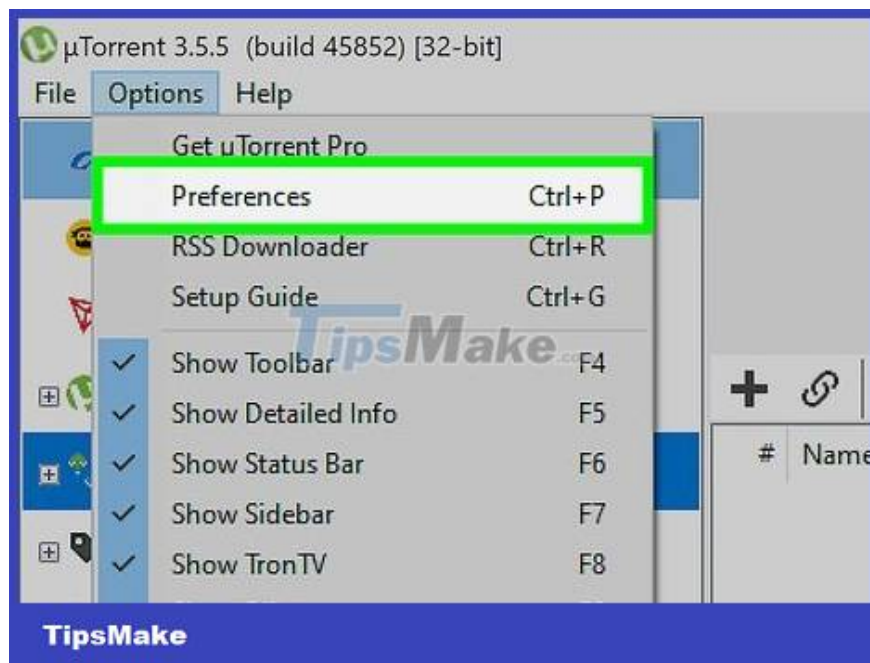

Click Queuing on the left side and set 1 as the maximum number of files to be downloaded at a time.

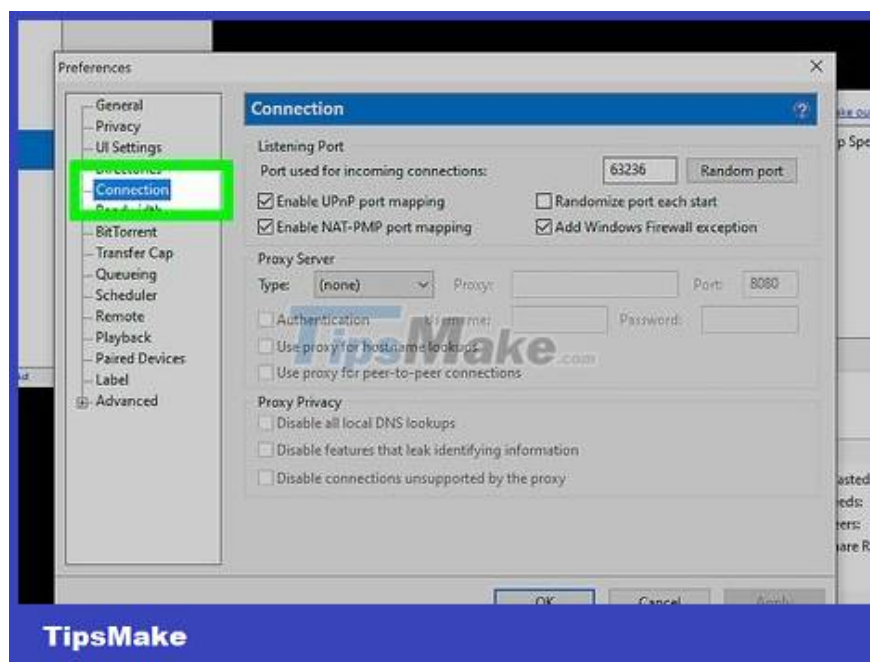

Click Apply and then OK.

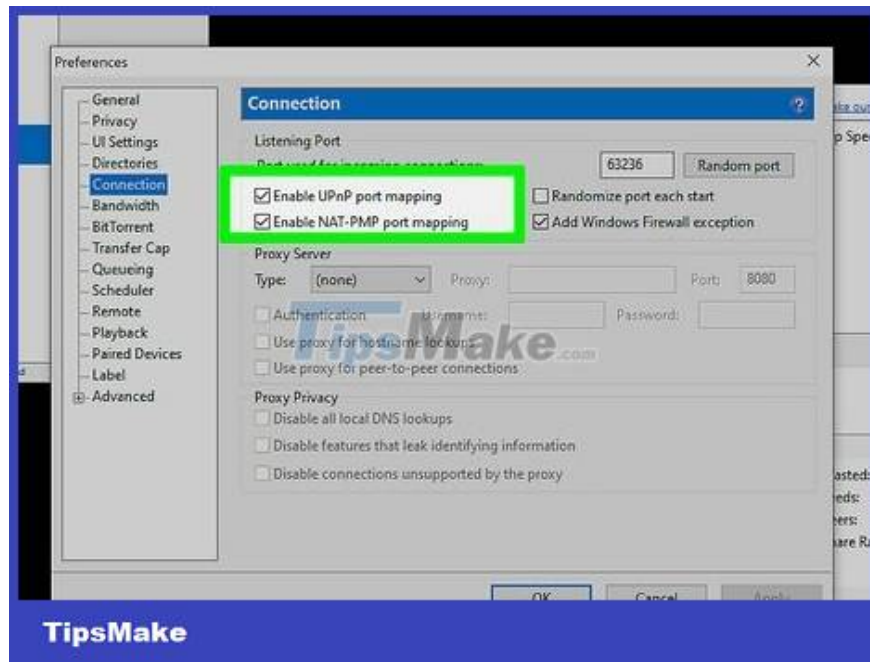

Enable the UPnP network protocol. As a result, uTorrent can bypass the firewall to connect directly to the "seeds", ensuring maximum transmission speed. To enable UPnP:

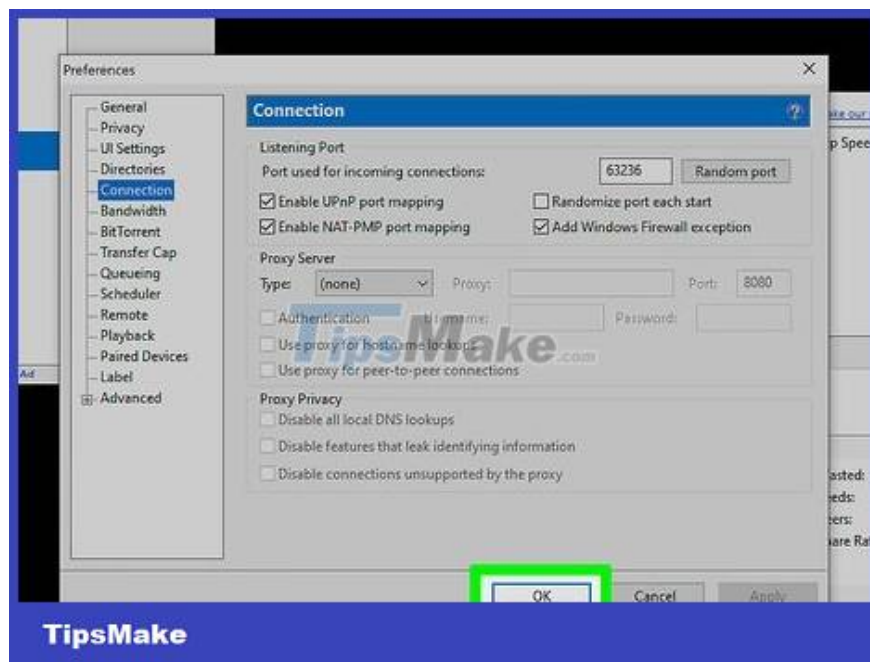

Click Options and select Preferences.

Click Connection in the left menu.

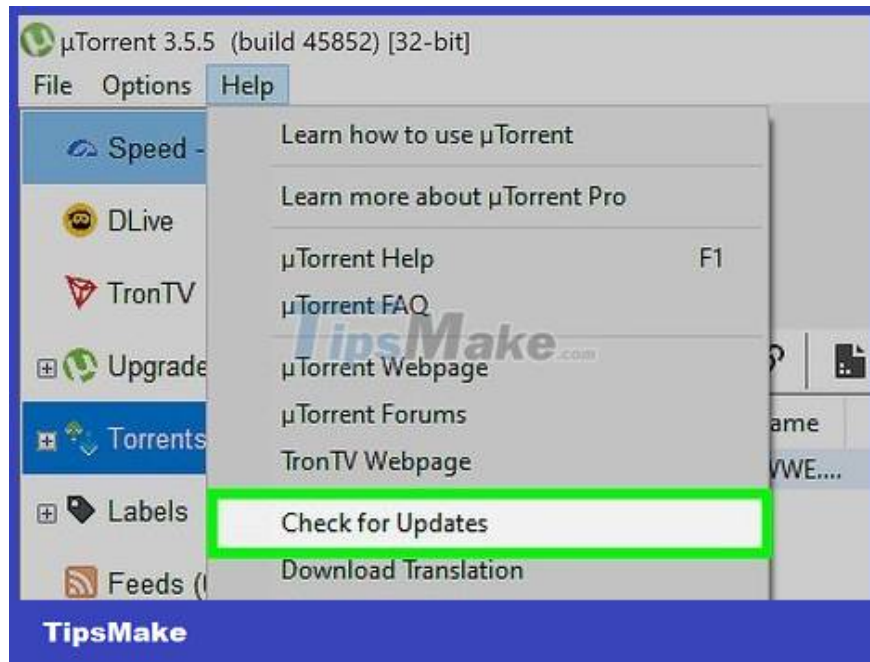

Check the box to enable the UPnP protocol.

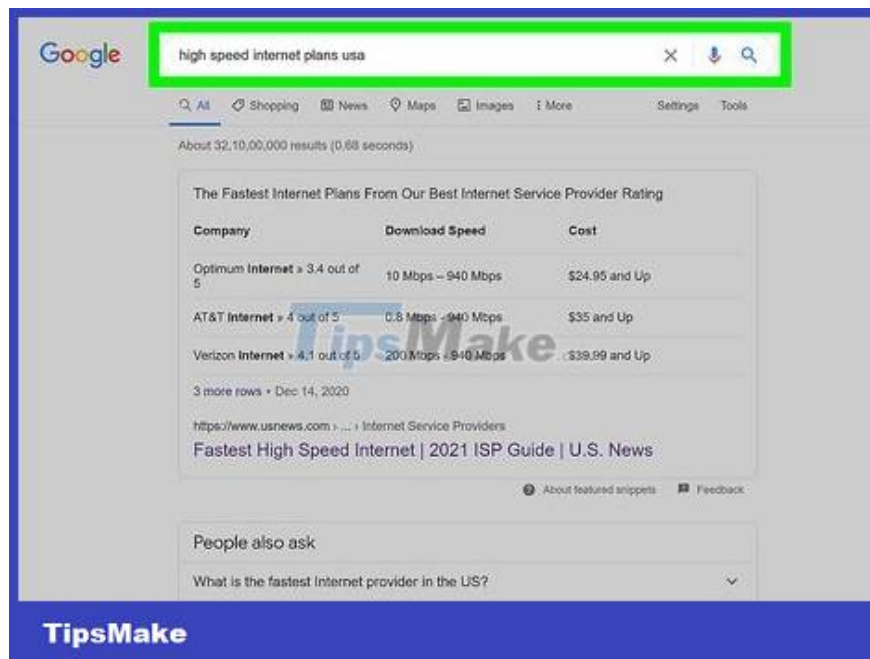

Click Apply and then OK.

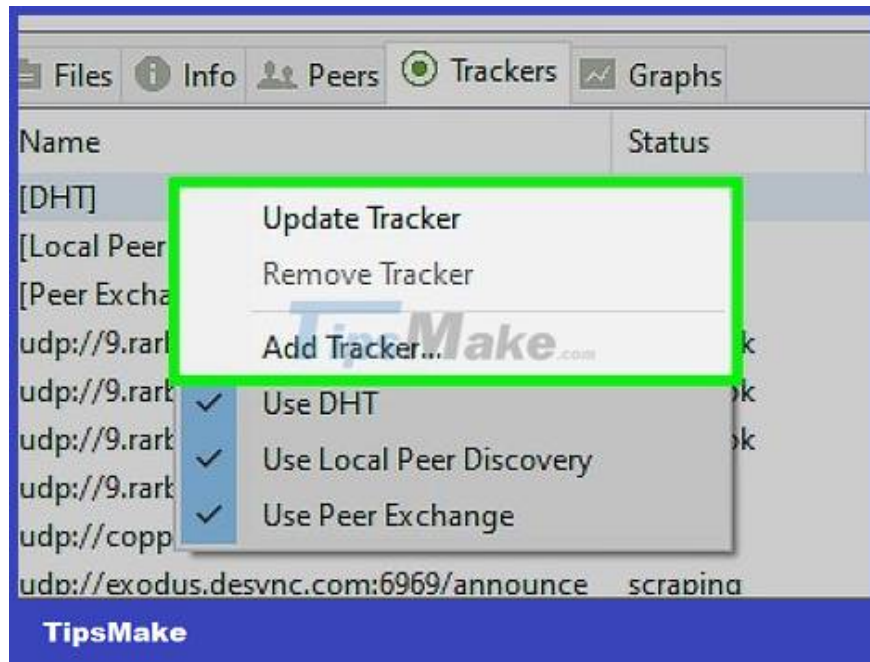

Are you using the latest uTorrent version?

Make sure you have the latest version of uTorrent on hand. Please check for updates on a regular basis. You can do so by clicking Help and selecting "Check For Updates".

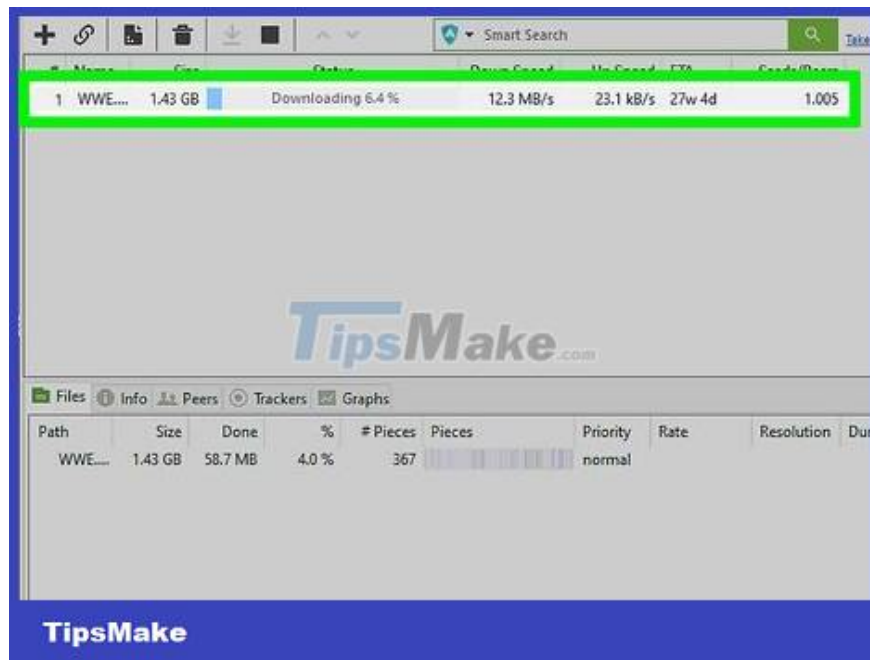

Sign up for a higher speed internet plan. Depending on where you live, you may still be able to upgrade the speed of your internet service. Even if the monthly fee increases, if you change carriers, you will probably earn a good price.

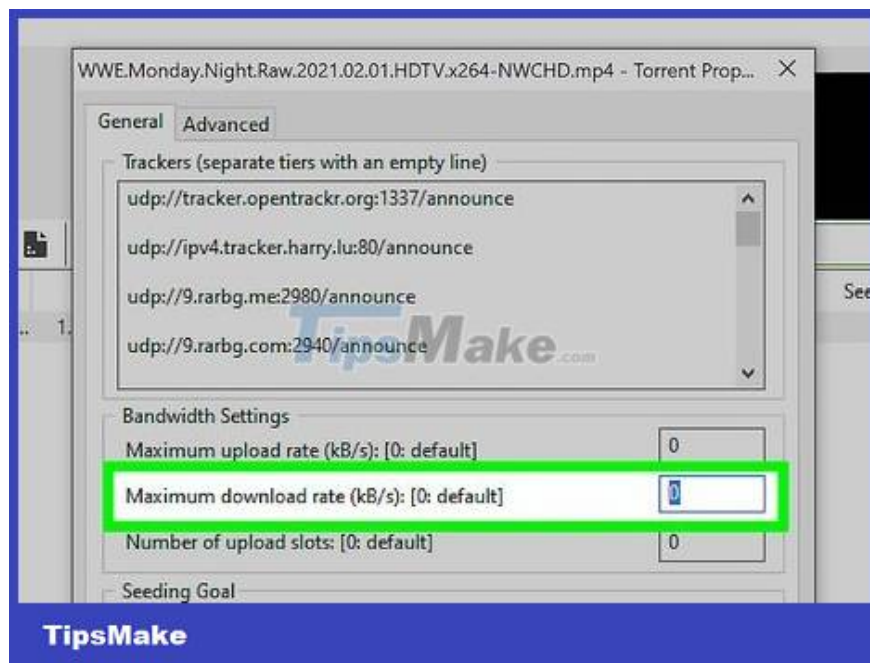

Add home network. With a home network with more "seeds", you can download files quickly.

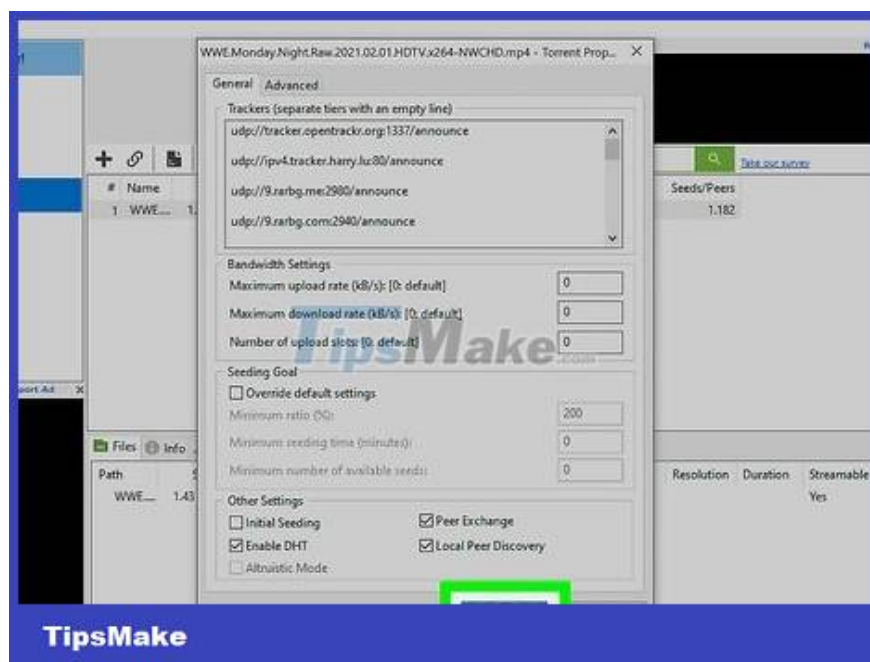

Have you considered changing the loading speed?

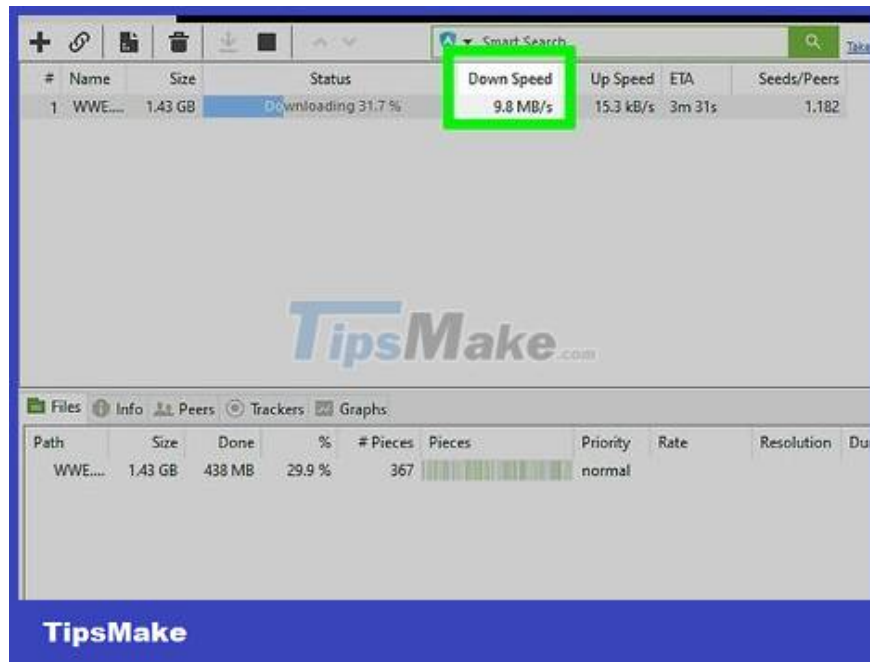

Double-click the download window. A menu will appear, saying "maximum download speed" or something similar. Such as 0.2 KB/s.

Change the number displayed. 0.0 means unlimited speed.

Click OK.

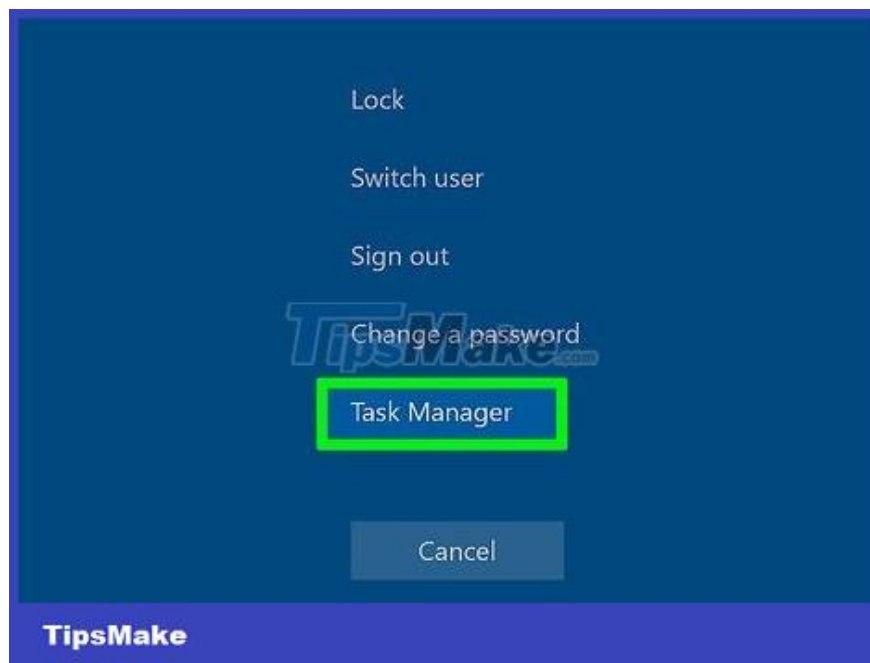

Now watch the download speed increase to at least 500 Kb/s. It takes a while to get to this point, but by then, your download speed will probably be a bit faster than before.

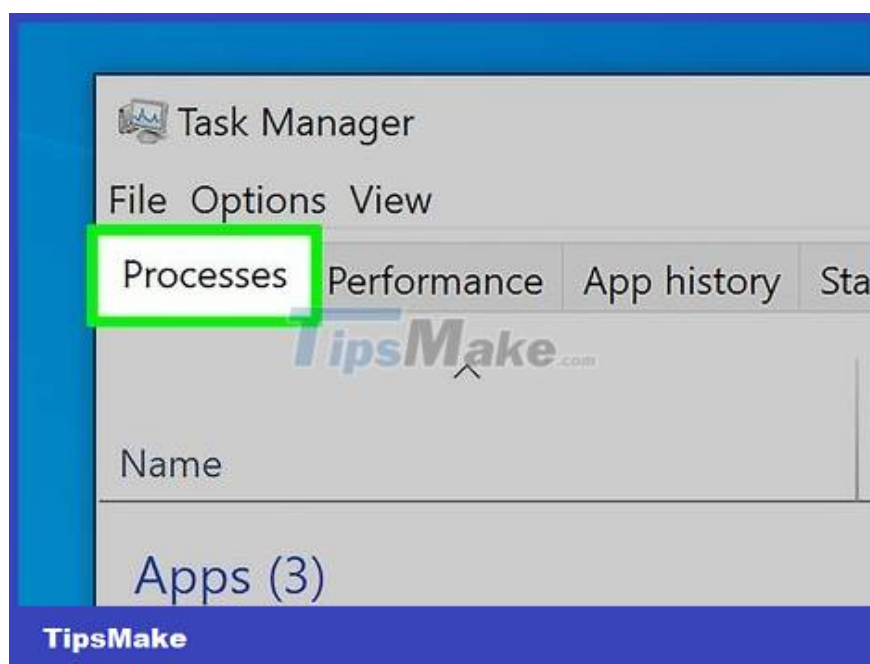

Have you set uTorrent preferences?

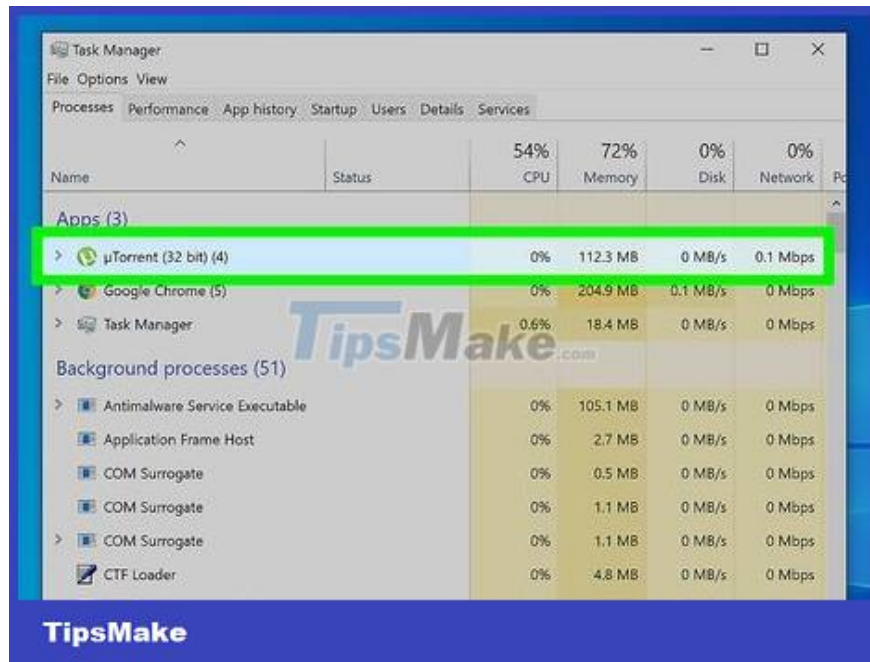

Simultaneously press Ctrl+Alt+Del or Ctrl+? Shift+Esc.

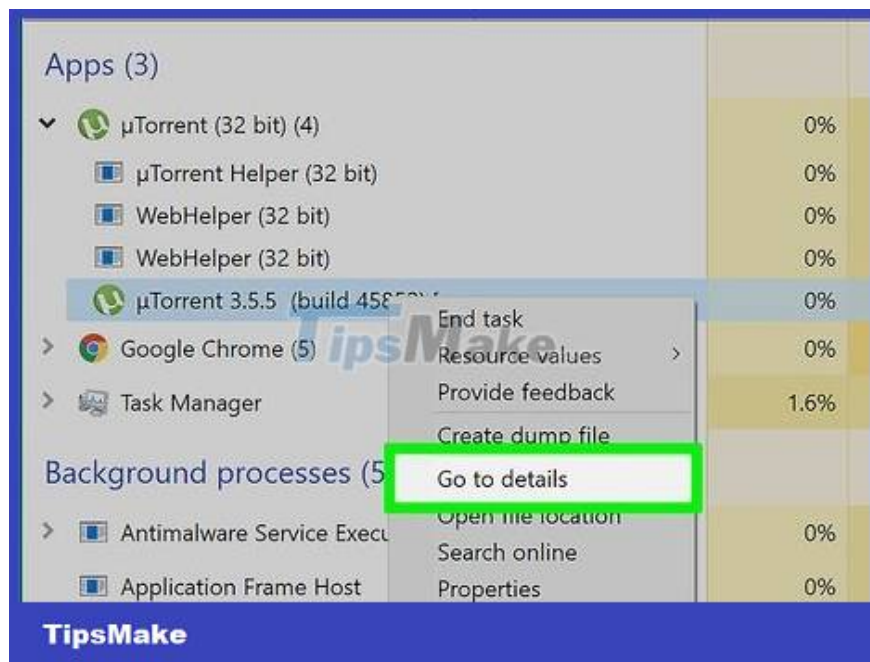

Click Start Taskmanager.

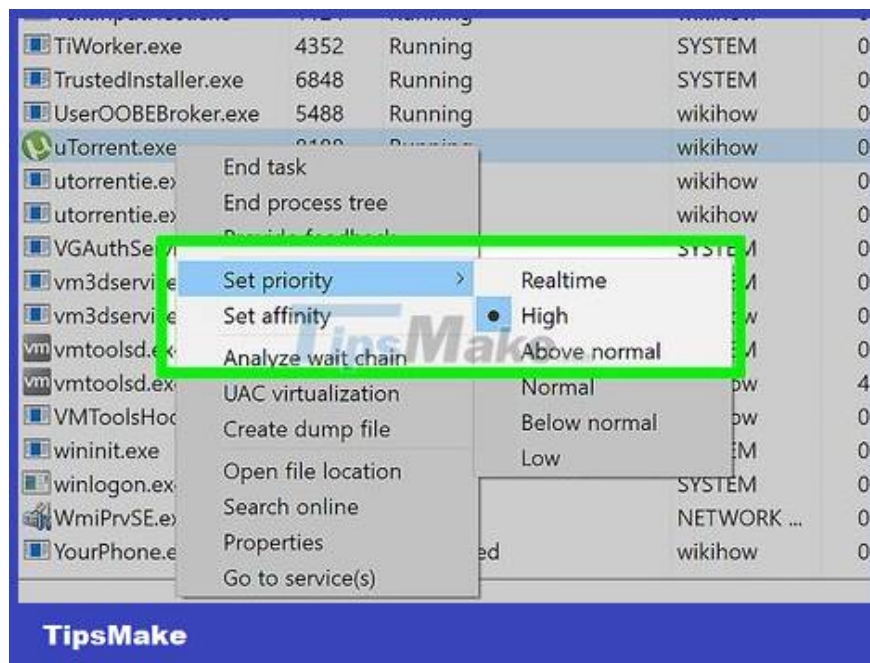

Go to Processes.

Scroll down until you find uTorrent.exe.

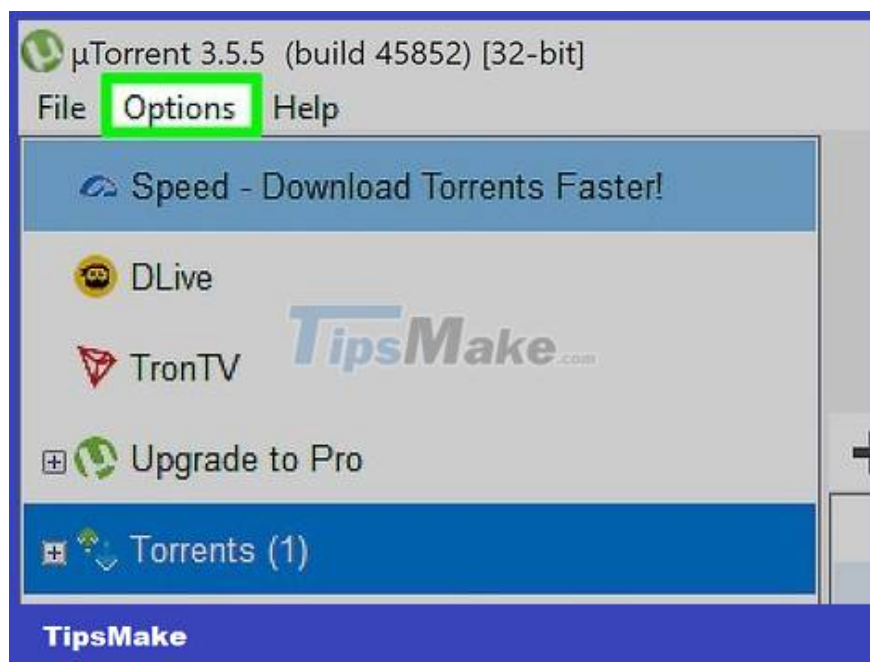

Right click on it.

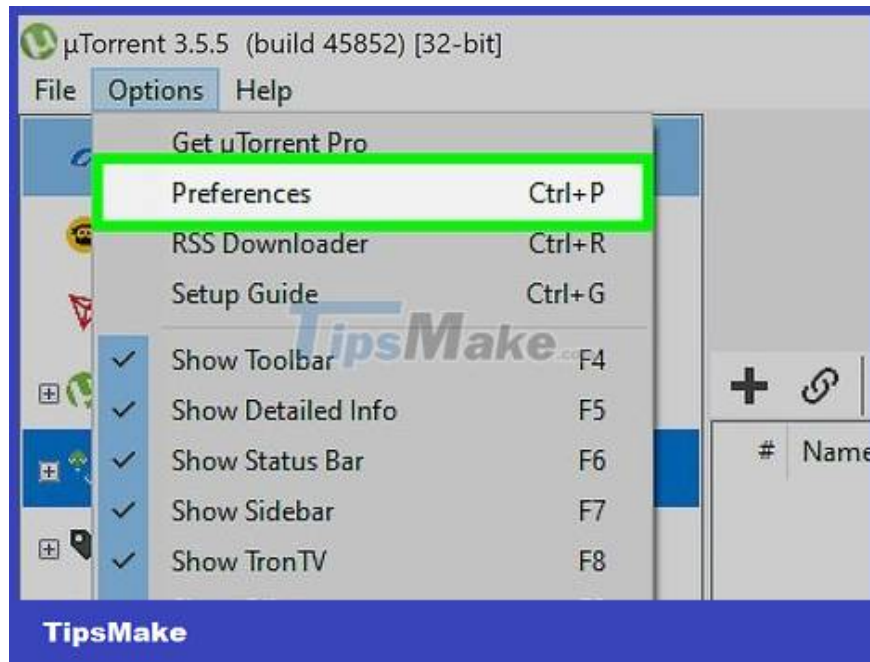

Set Priority to High.

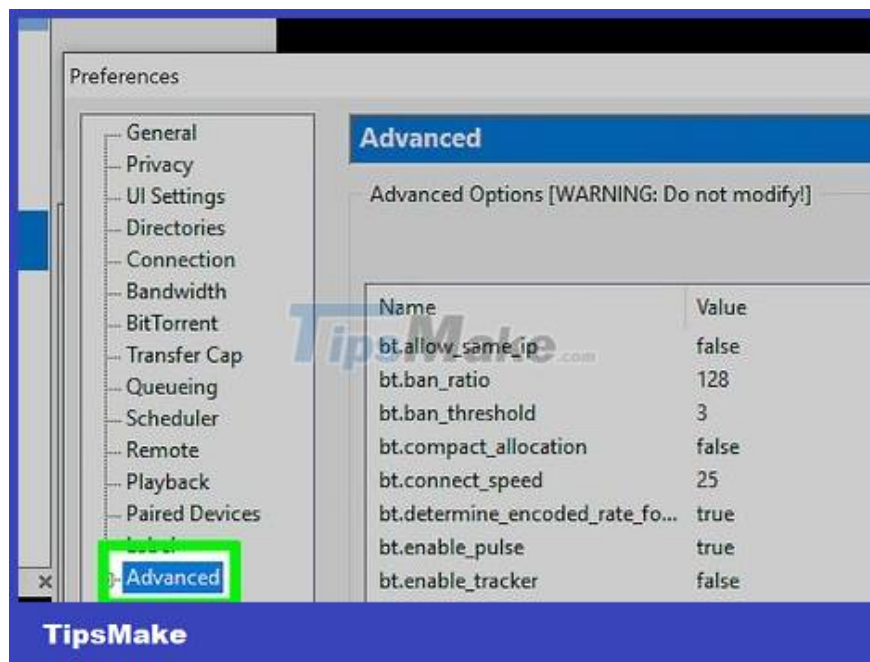

Have you adjusted other settings?

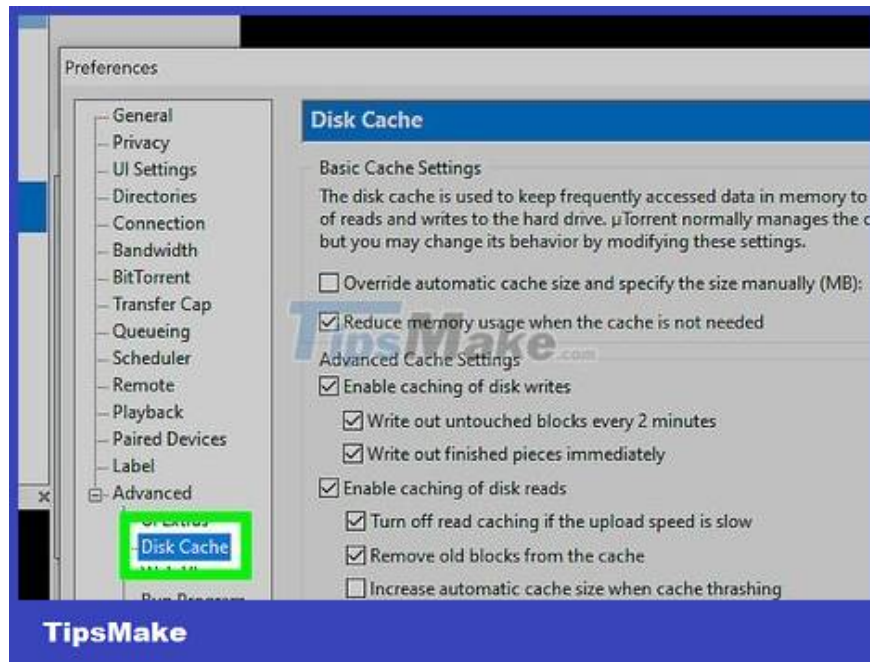

Click Options.

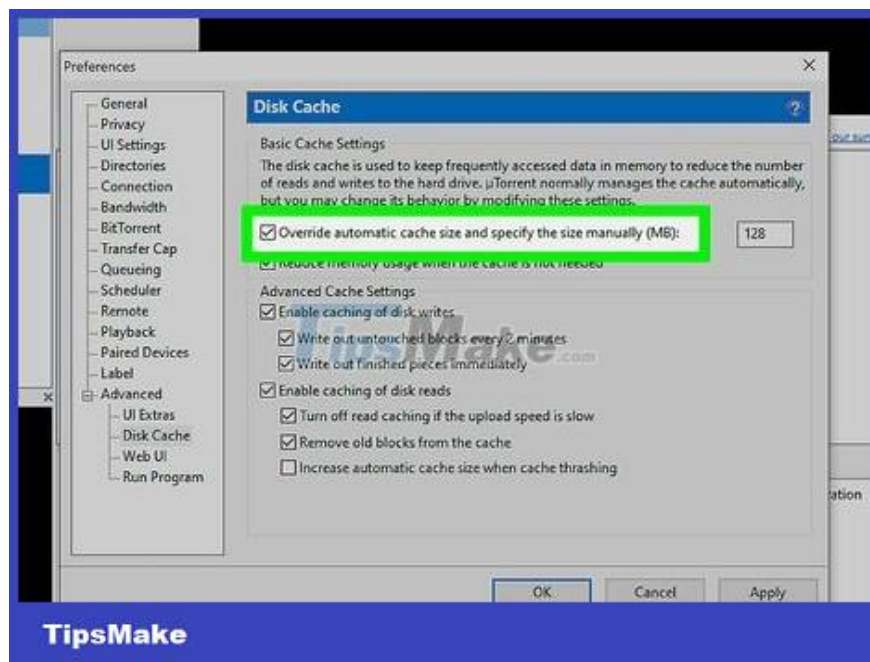

Click Preferences.

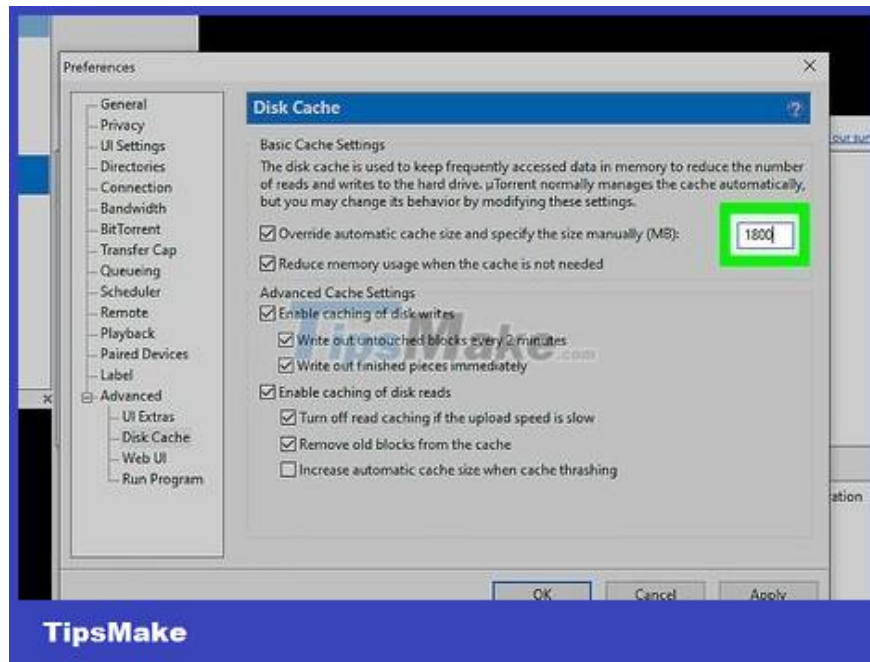

Go to the Advanced section and click the "+" sign to expand this section.

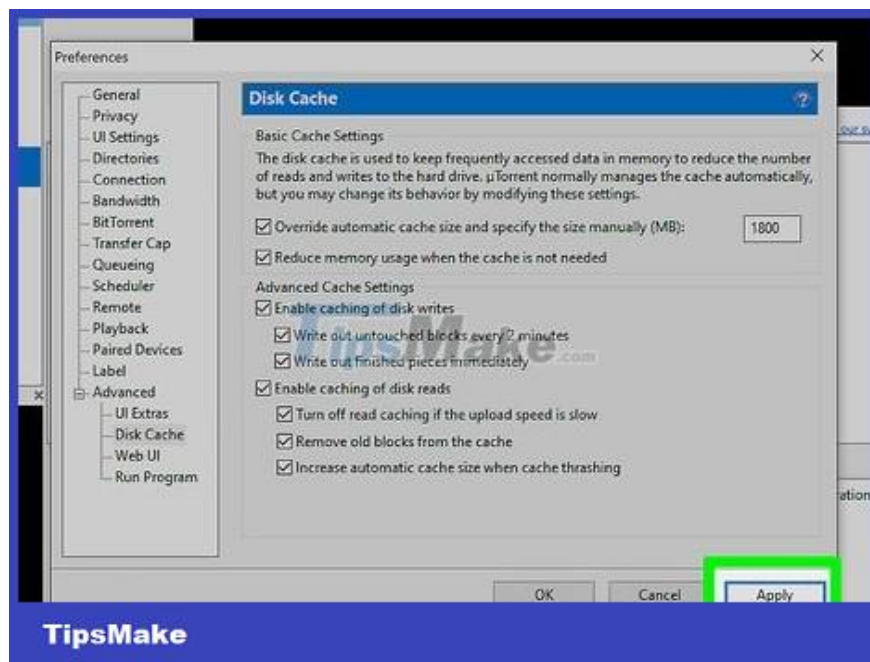

Go to Disk Cache.

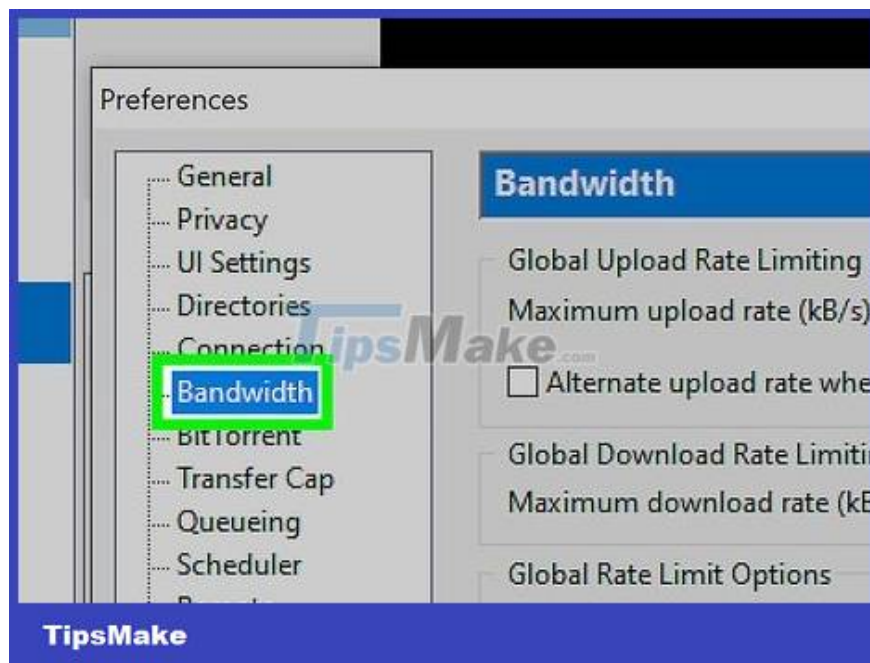

Enable "Override automatic cache size and specify the size manually (MB)".

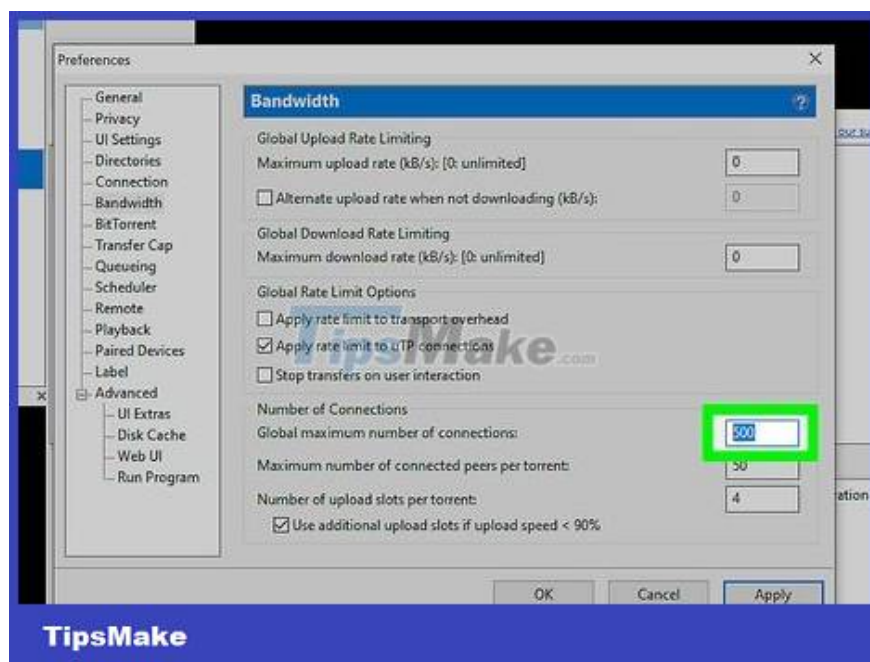

Type 1800 in the box to the right of "Override automatic cache size and specify the size Manually (MB).

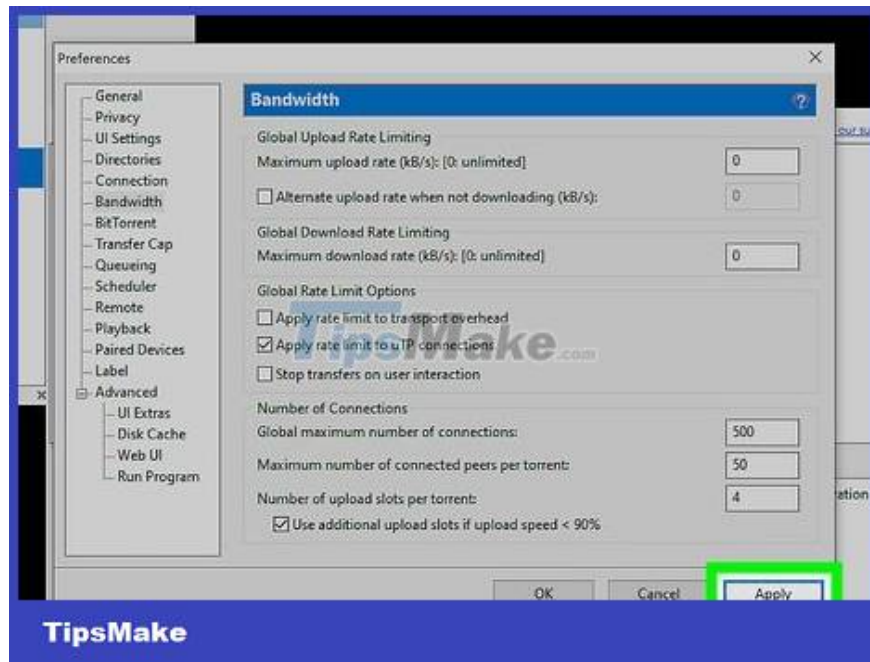

Click the Apply button.

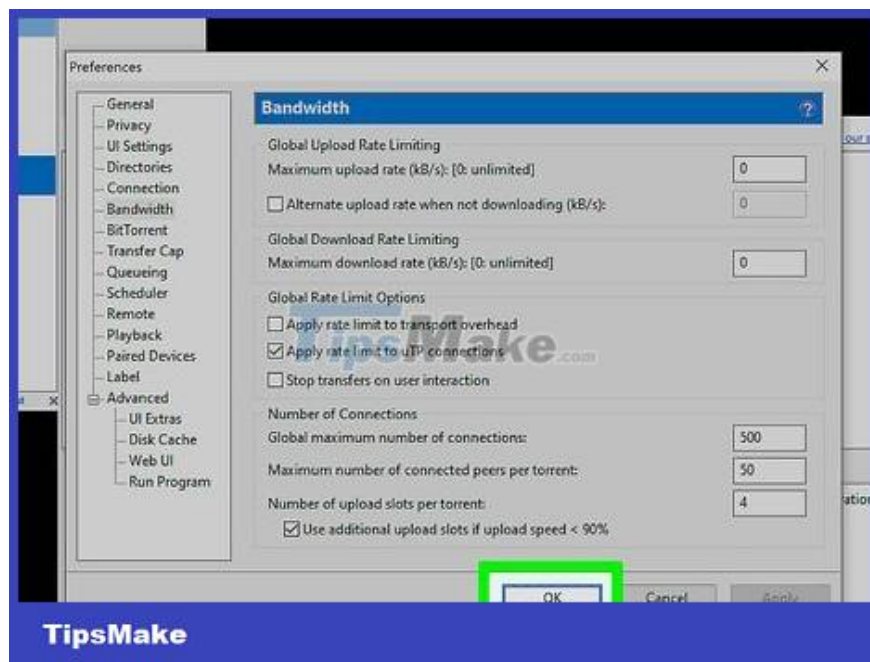

Select the 'Bandwidth' tab.

Select the "Global maximum number of connections:" section and change the value to 500.

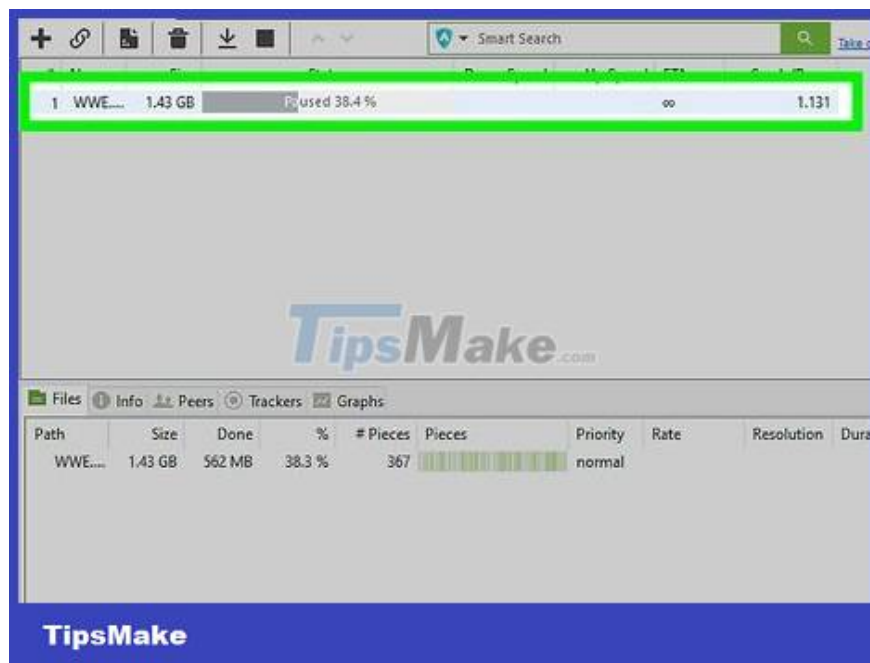

Click the Apply button.

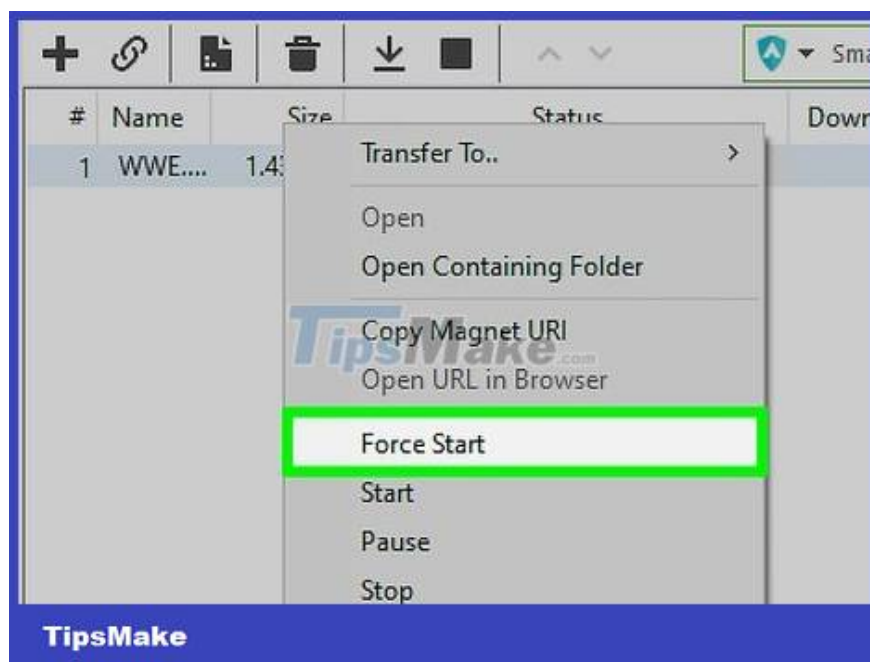

Close the Preferences page. Click the OK button to close the page and save your changes.

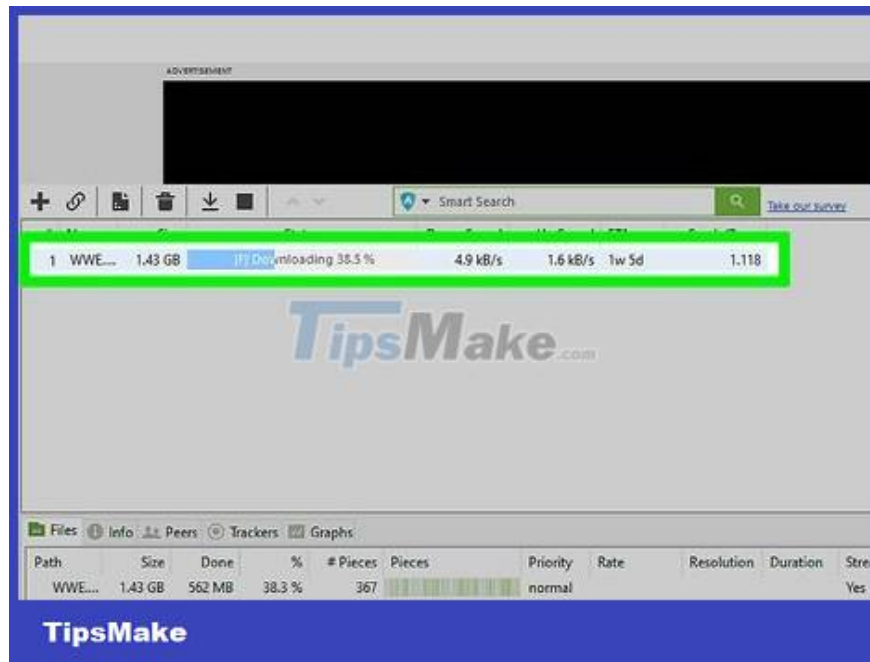

What about hot boot?

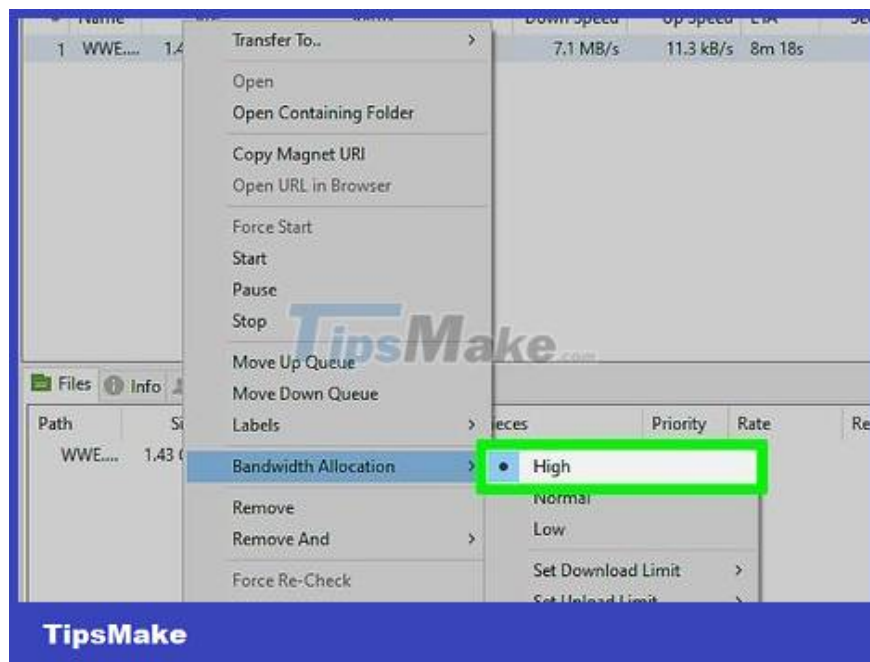

Right click on the torrent you want to increase download speed.

Press "force start" (hot start) in the menu displayed.

Right click again on that torrent.

Click on the bandwidth allocation item in the displayed menu and select high.
