

# How to split screen on iPad

The ability to run screen split applications on iPhone and iPad has been around for several years. However, this is one of the least-used features on iOS. This is understandable when mobile users rarely use this feature because the phone screen is small, even with the iPhone X, the size increases insignificantly.

The ability to run screen split applications on iPhone and iPad has been around for several years. However, this is one of the least-used features on iOS. This is understandable when mobile users rarely use this feature because the phone screen is small, even with the iPhone X, the size increases insignificantly.

However, tablet users can take advantage of this feature during their work. This feature helps them save time and be more productive. This article will show you how to split the iPad screen and some of the best tips and tricks to make the most of the screen split mode.

## What is Split View on iPad?

Split screen or Split View allows you to use two parallel applications. For example, you can write an email showing directions to someone while simultaneously viewing a map. This feature works best when the screen is in landscape mode, but it still works vertically.

Note, not all iPad models support this screen split feature. Your iPad must belong to one of the following lines: iPad Pro, iPad Air 2 or iPad Mini 4. If the iPad is not qualified, you can still use gestures across the four fingers to switch between applications.

## How to turn on screen split mode on iPad

To use screen split mode, you need to make sure one of the two intended applications is on the dock. Note, unless the default settings are changed, otherwise the applications you recently used will display on the right.

Next, open another application you want to use in split-screen mode, this app doesn't need to be on the dock. After opening the app, swipe from the bottom of the screen to appear the dock bar, press and hold the application icon you want to open and drag it to the right of the screen.

The screen will automatically adjust, after you see the screen adjusted, you can release your finger. Two applications will open in split screen mode.

## How to adjust the split screen size

When performing multitasking with two applications, you can adjust the working application size without turning off the other application. The implementation is very simple, just specify the dividing line between the

two applications, then touch and drag it to the desired location.

## How to close the application in split screen mode

When you have completed multitasking, you need to close either application to return to normal mode. Same as above, you need to define the black dividing line between the two applications, touch and drag it, but this time drag all the way to one side of the screen.

## Using Slide Over on iPad

Another feature associated with dividing the screen is Slide Over. To use this feature, you need to have at least iPad Pro, iPad Air or iPad mini 2. This feature allows you to use the second application on the top floating window in full screen mode, like as on the computer.

To activate Slide Over, you also need to leave an application on the dock and an application in full screen mode. Next, swipe up from the bottom of the screen to appear the dock, press and between the application icon used in Slide Over mode, drag it to the screen and release it. To close the Slide Over application, swipe it to the right of the screen.

## Switch from Slide Over mode to Split Screen

If you are working in Slide Over mode you can easily switch to Split Screen mode by swiping the Slide Over application from top to bottom and dragging it to one side of the screen. Note, you cannot release your hands until you see the main window is closed.

## Switch from Split Screen mode to Slide Over

Similarly, you can also switch from Split Screen mode to Slide Over by swiping the application you want to use in Slide Over mode from top to bottom, drag it to the middle of the iPad screen and release it.

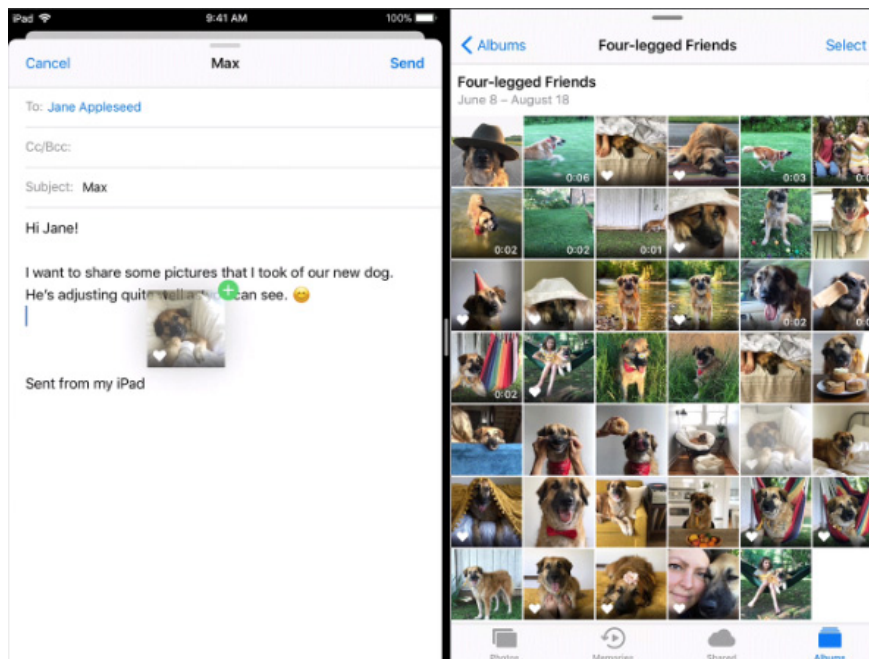

## How to open three applications at the same time on the iPad

You can even open three applications at the same time by combining both screen split and Slide Over modes. First, launch screen split mode according to the instructions above. Once in split-screen mode, swipe up from the bottom of the screen and drag an app icon of the dock to the center of the screen.

You must drag the application you want to use in Slide Over mode exactly on the top of the black dividing line between the two applications that split the screen. If it is not set correctly, it will replace the screen split application with the application you dragged.

## Drag and drop on iPad

Whenever you use screen split mode or Slide Over mode, you can drag and drop files between opened apps using iOS 11. Drag and drop feature. Not all of these applications are Compatibility with most productivity applications has this feature. That means you can drag text files from iMessage to Notes or photos from your email account to your calendar.

To drag and drop an item, press and hold the file mentioned until it pops up from the screen. If you want, you can select multiple items using another finger to click more files. When selecting all the necessary files, drag the items into the application you want and release your finger. If your iPad does not support this feature, you can use the third-party drag and drop application.
