Guide to dividing Chrome screens with Split Tabs

1. Download the Split Tabs Chrome utility

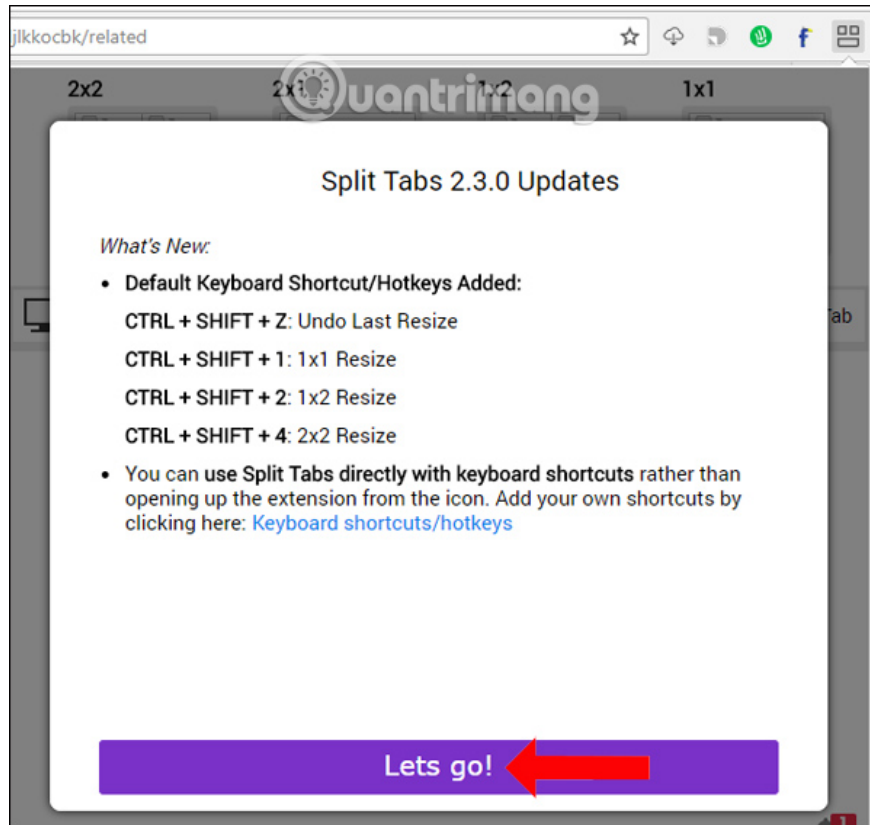

Step 1:

First of all, download the Split Tabs utility from the link above and proceed with the installation as usual on the Chrome browser.

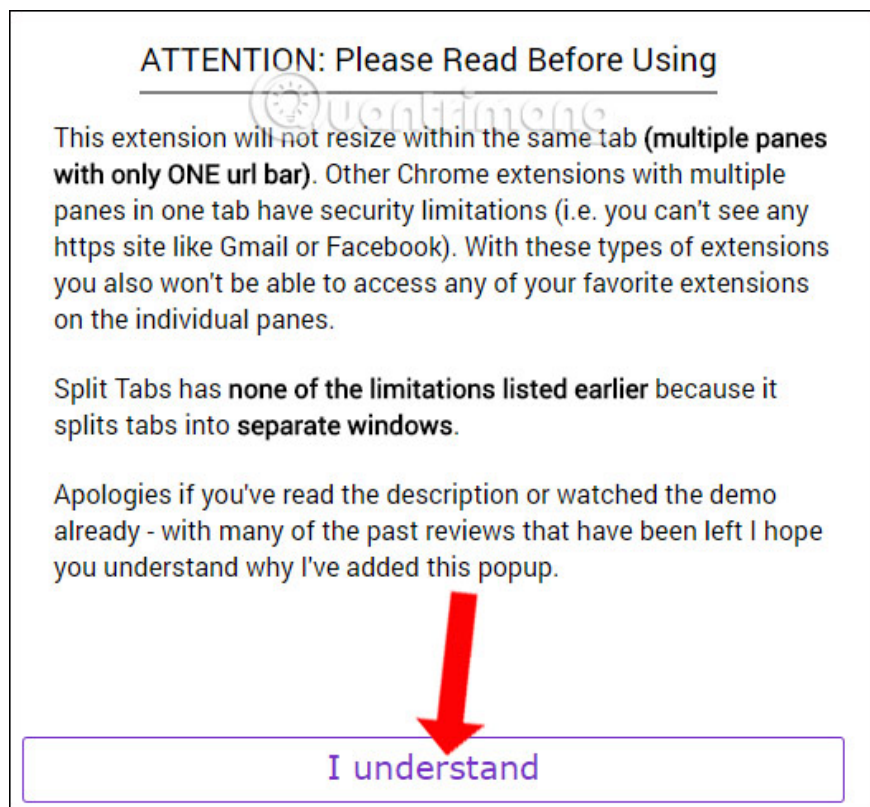

Step 2:

When the installation is successful, a utility icon will appear at the end of the address bar. Clicking on it will see a list of screen split shortcuts, click the **go Lets!** .

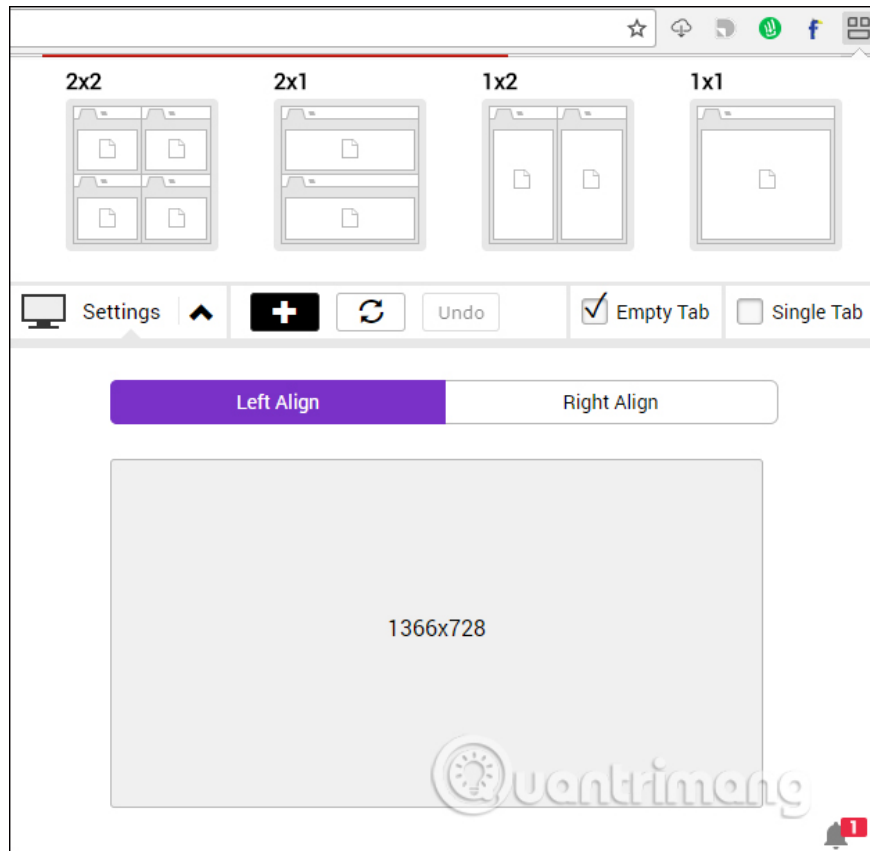

The utility will issue notifications to the user, click **I understand** to continue.

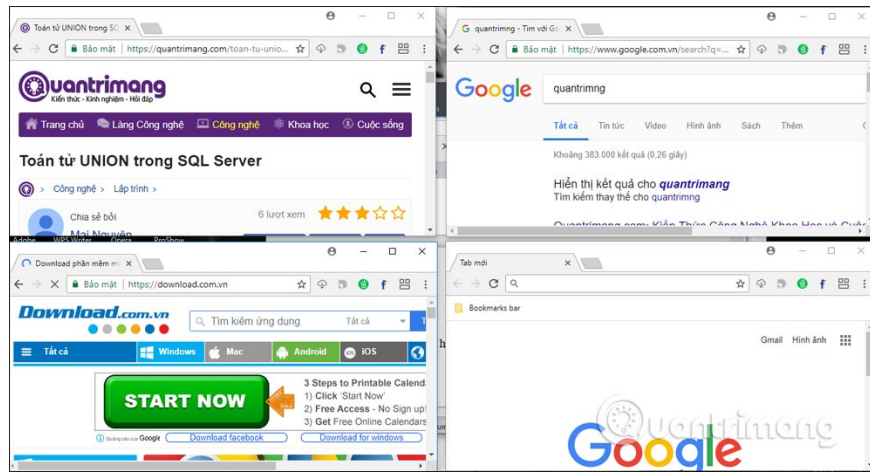

Step 3:

When using for the first time, the Split Tabs utility will bring screen split suggestions along with preview images, such as 2x2, 2x1, 1x2 or 1x1. We can rely on these types of previews to choose which type of screen we want to split.

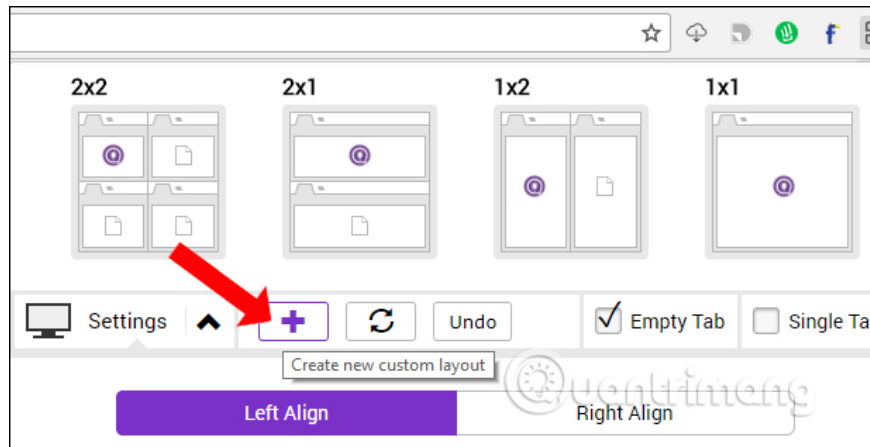

For example, I will split the 2x2 screen and get 4 small screens as below.

At that time the screens will be divided into different separate tabs and be scaled according to the screen that the user has chosen. As such, we can easily adjust each tab like normal web browsing, or you can turn off one of these tabs.

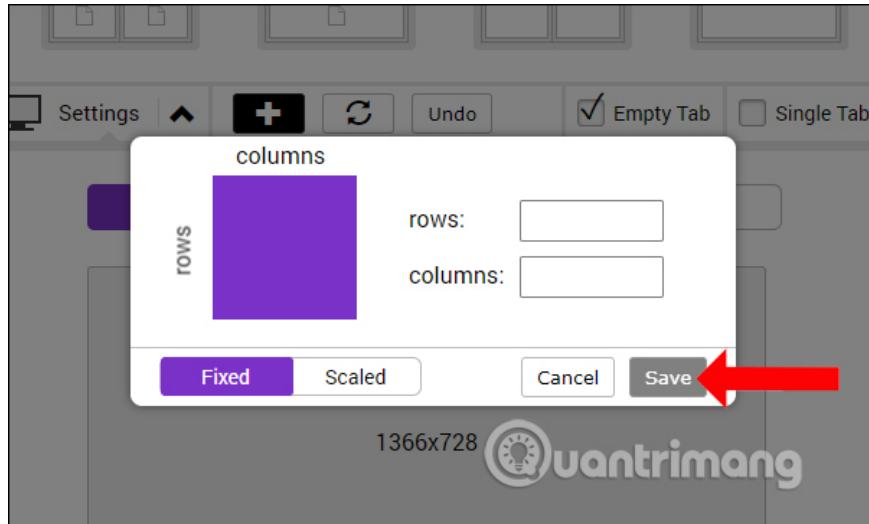

Step 4:

In addition to giving a list of suggested screen split styles, the Split Tabs utility also supports users **to design their own split-screen layout** . At the utility interface click on **the plus icon**.

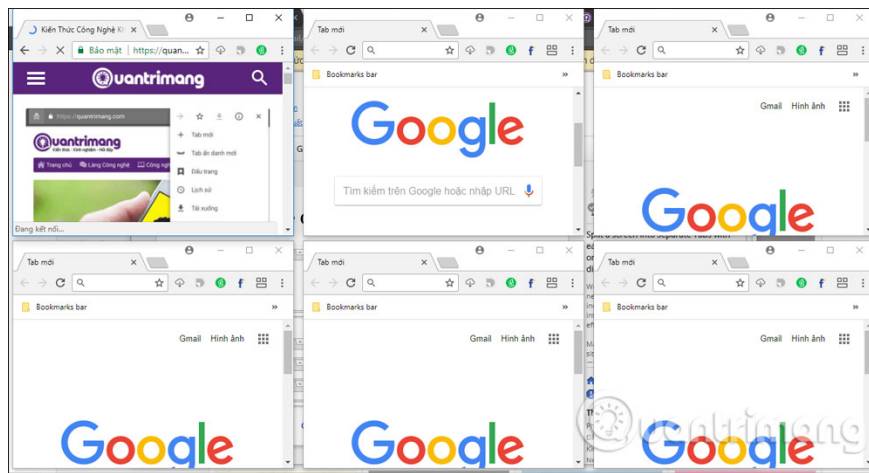

Step 5:

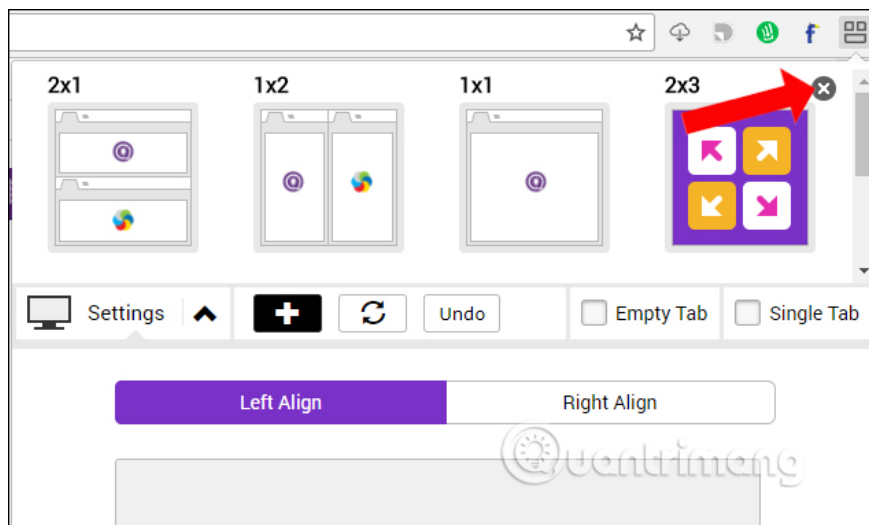

In the Fixed section, users can enter the column number at the columns, the number of rows in the rows want to split the screen. You can preview the split screen type on the side. If you want to use this type of screen creation, **click Save** .

For example, I will **split the screen in 2x3 style** and will get the result as shown below. That means 2 columns and 3 columns per row.

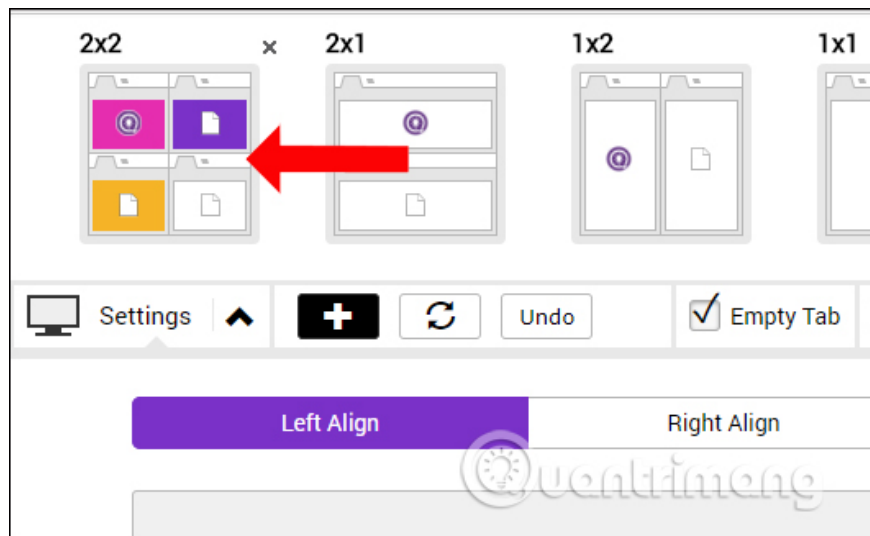

If you do not want to use this type of screen split on Chrome, press **the X to delete** the split screen type.

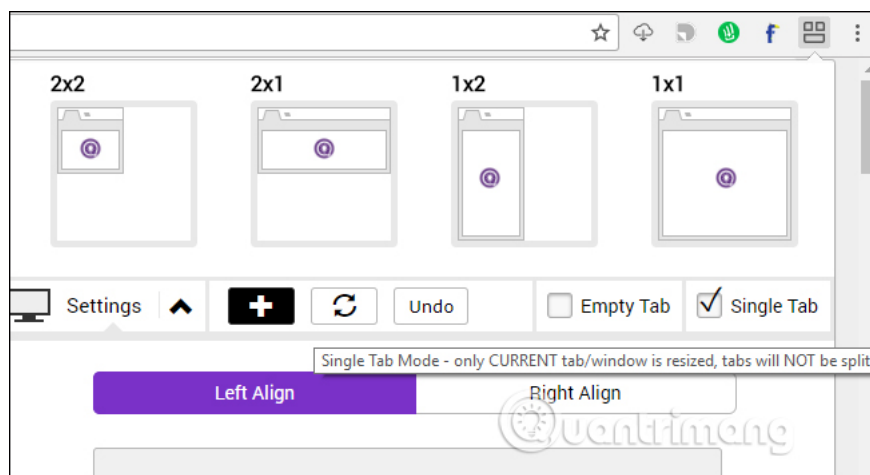

Step 6:

In addition, the Split Tabs utility also offers the option to adjust the screen. With the **Empty tab**, blank tabs will automatically open to complete the type of screen the user chooses, in case there are not enough tabs in the layout.

Single tab, the tab will not be broken down and still lumped together a window and scaled down so you can work on the computer.

The Split Tabs utility brings the screen split tool on Google Chrome, helping users to handle tasks more quickly with separate tabs, or work simultaneously on Chrome browser and computer. We can rely on the type of screen divider available, or create the screen split style according to the needs of each user.
