

How to split the screen on iPhone

Dividing the screen on the iPhone will help access 2 websites at the same time, saving on screen operations.

Dividing the phone screen is a way for us to log in to multiple Facebook accounts at the same time, visit two websites at the same time as listening to music while surfing the web or online Facebook, etc. So users can reduce operations Move between tabs on the browser, perform actions at the same time without switching to other tabs.

Multitasking Split Screen and Splitware is an application that splits the device screen to access 2 links at the same time, with the ability to operate separately between two websites. The application provides a number of popular websites for you to choose from, or we can import the page link into the browser bar as usual. Using applications to split screens on iPhone is also very simple and is guided by Network Administrator in the article below.

1. How to split screen using 2 applications on Galaxy S8 / S8 Plus
2. How to turn off the split screen feature on the iPad
3. How to split screen on iPad

1. How to use Multitasking Split Screen iPhone

Step 1:

Users click on the link below to download Multitasking Split Screen application.

1. Download Multitasking Split Screen iOS

Step 2:

Start the application and you will see the Multitasking Split Screen interface available in two screens as shown below. Each part will be a screen to access different websites. The application has suggested 6 services available for you to use as Twitter, YouTube, Google, .

You access the site as usual. The iPhone screen will be divided into 2 halves as below.
