

How to stack widgets on iPhone to compact the screen

To compact the iPhone screen and also easily manage widgets with the same purpose, users can stack iPhone widgets into one arrangement.

To compact the iPhone screen and also easily manage widgets with the same purpose, users can stack iPhone widgets into one arrangement, similar to creating a stack of widgets on Android. All the utilities when put together in a folder just swipe up and down to find the widget you want to use. The following article will guide you to stack widgets on iPhone.

Instructions for stacking widgets on iPhone

Step 1:

First, **press and hold the screen on your iPhone** and then tap **the plus icon** on the right edge of the screen. Now display the interface of utilities on iPhone for you to choose from. We **choose to the first widget** we want to create a widget pane.

TipsMake

Step 2:

Select the widget you want, then **move the widget out of the screen**. Note, the widgets that want to overlap must have the same size, so you need to pay attention.

Step 3:

Next, the user opens the widget management interface and **navigates to the second widget to create a widget stack** . Then you **drag that widget to the screen and then overlap the first widget** to create a widget management drawer.

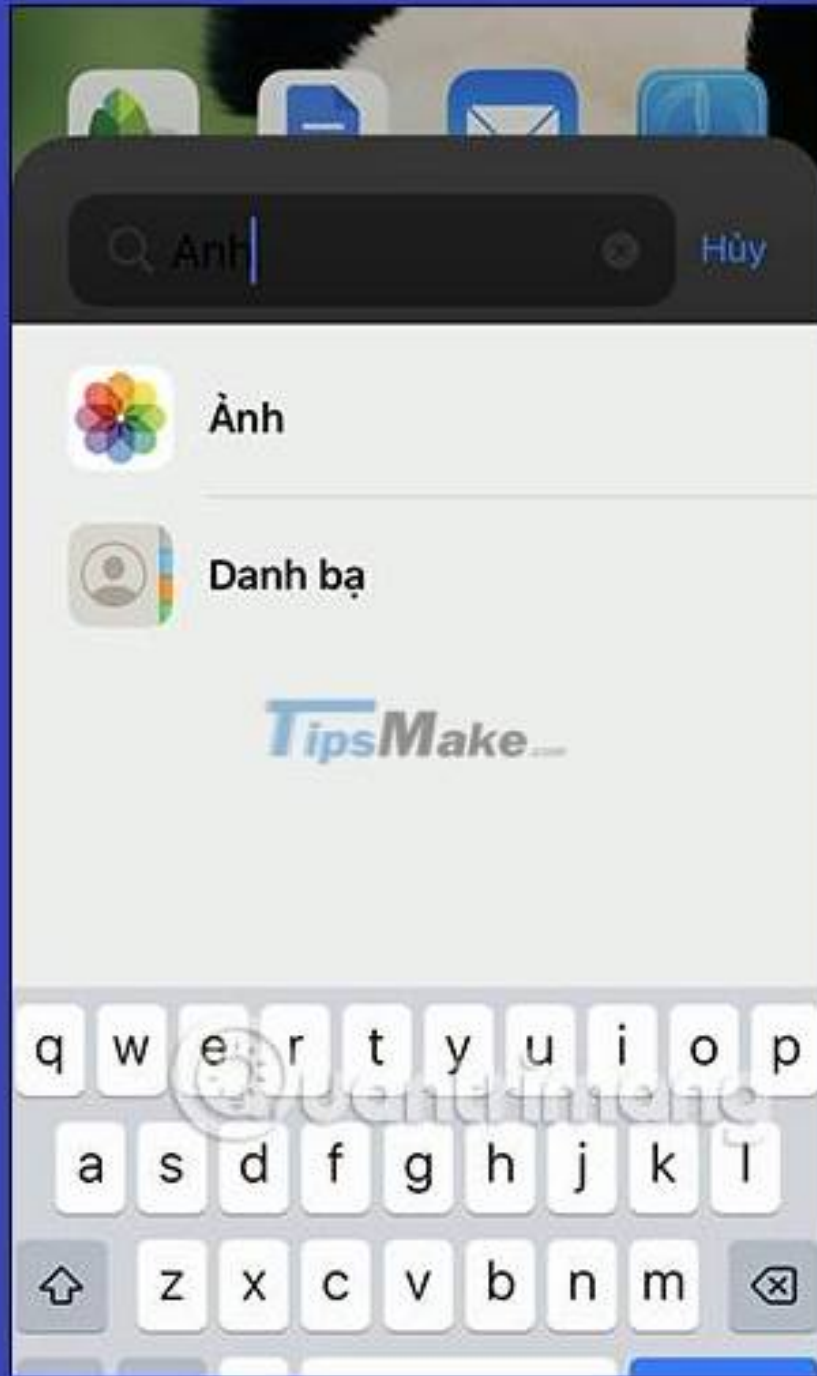

TipsMake

Step 4:

Now you look for other widgets to add to the widget management pane you created. We can add many widgets on iPhone to this management pane, then also drag the widget to the screen and overlap the existing widget pane on the screen.

Step 5:

Thus, the widgets have overlapped and formed the widget management pane on iPhone as shown below.

Step 6:

You just need to swipe up and down on the widget in this management pane to select the widget you want to use. Then the widget will shrink to make it easy for us to find.
