

How to stream games on Garena Live from a computer

Garena Live is a completely new feature on the Garena Plus tool, allowing users to play live stream games from the computer screen.

Garena Plus is a popular and familiar game support tool for all gamers. And in the newly released version, the Garena Live feature has been updated to most users, with the ability to support gamers who can stream live gaming screens on their computers.

In addition, Garena Live also allows players to use images on webcams, open chat frames on the interface, record any sound in the game and outside with stable quality. In the following article, we will guide you how to play live stream on Garena Live.

If you want to stream games to Facebook, you should consult the article: [This is how Live Stream Facebook Video on PC, Fanpage](#)

How to play live stream game on Garena Live

First, download the latest version of Garena for your computer using the link below.

1. Download Garena software for free

Step 1:

We start the software to install Garena on the computer. Then proceed to **login personal Garena account** . At Garena's main interface, you will see the Live button as shown below. Click on this **Live button** .

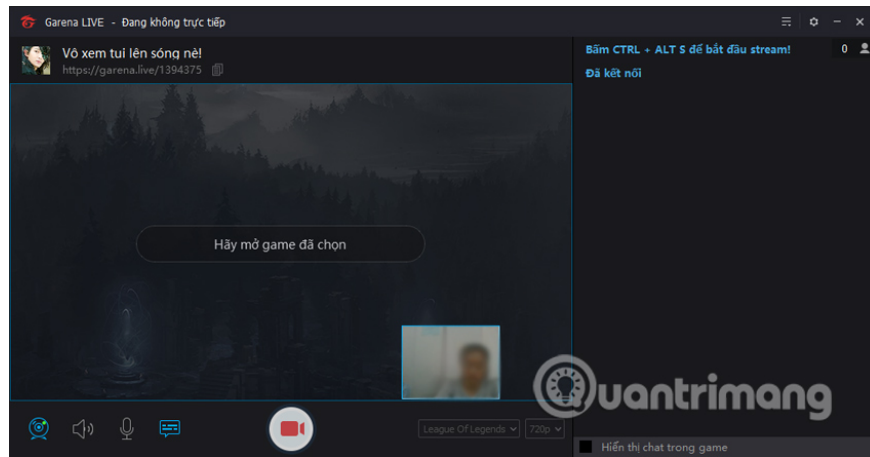

Step 2:

Next, you will see the new interface appear next to you and click the **Go Live** button to proceed to stream the game on Garena Live.

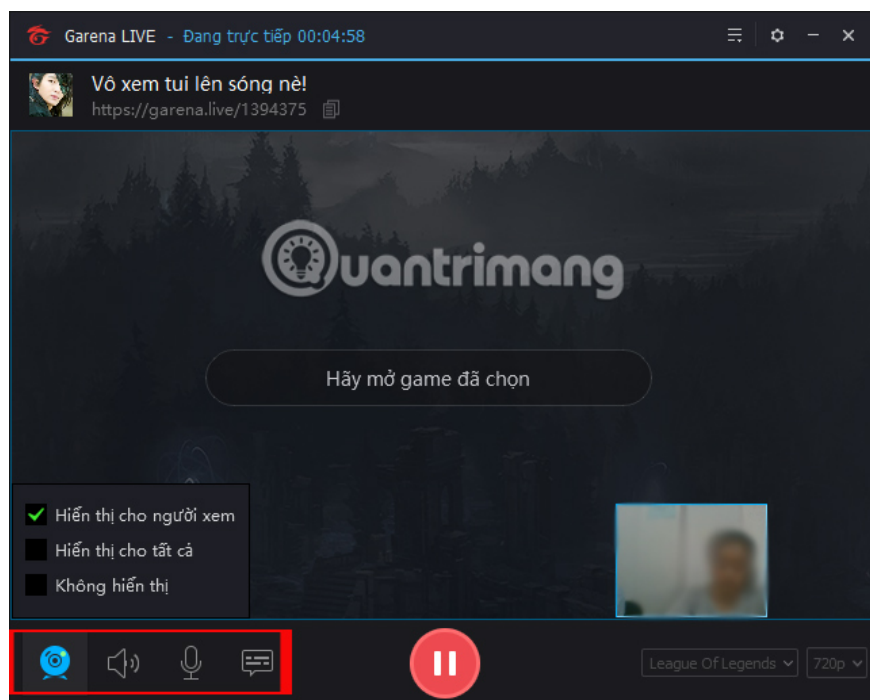

Step 3:

The live stream interface on Garena Live will look like the image below. In the small right corner of the live stream screen, you will see the image transmitted from the webcam.

Below the frame will be options to set up during live stream playback including:

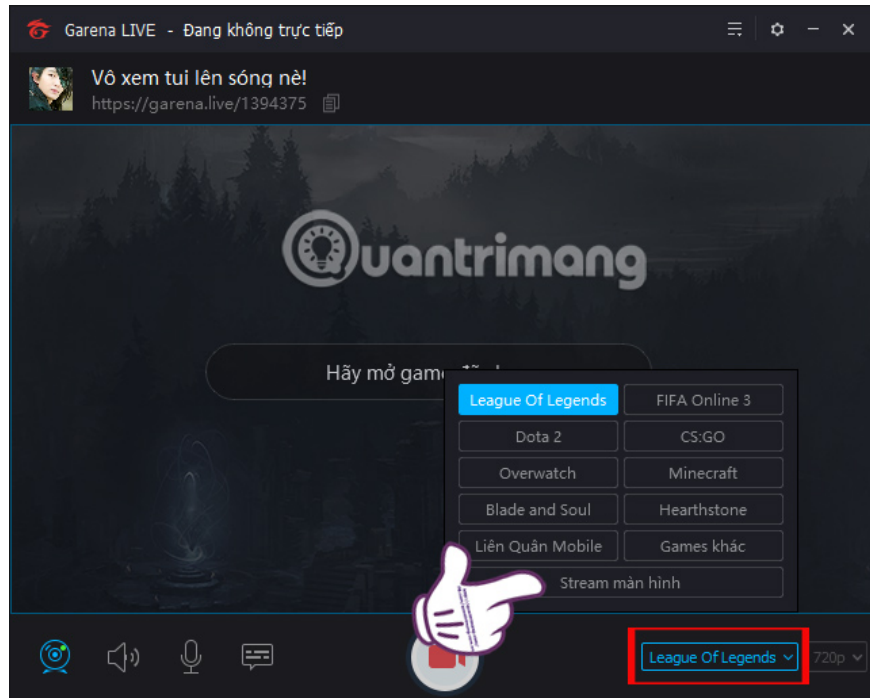

1. Webcam icon: optionally display webcam image for others to see or not in the play screen.
2. Speaker icon: adjust the sound when playing games.
3. Speaker icon: adjust the sound obtained.
4. Note icon: collapse the live stream playback interface.

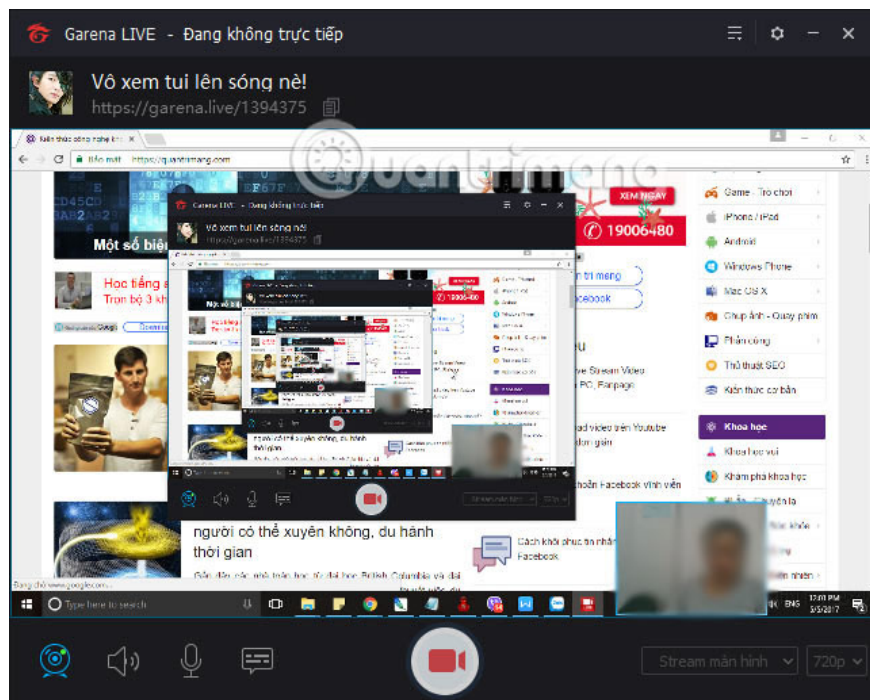

Step 4:

Here, we will select the game to conduct live stream on Garena Live. Some games are supported with live video playback such as League of Legends, FIFA, Online 3, Dota 2, CS: GO, Overwatch, Minecraft, Blade and Soul, Hearthstone, Mobile Union.

If the user wants to choose live stream of another game or stream directly from any screen on the computer, click on the **League of Legends** button and then select another Games or Screen Stream on the list.

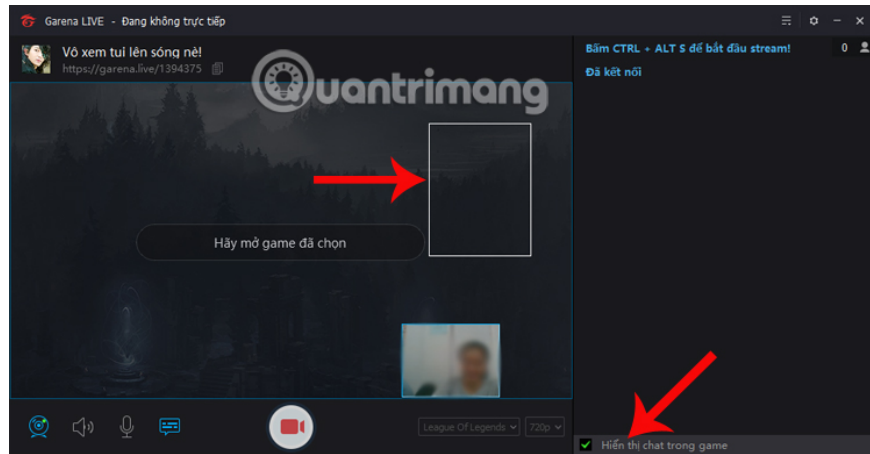

For example, I choose Screen Stream. You can select screens to record videos directly on Garena Live, if the computer is on many different program windows.

Step 5:

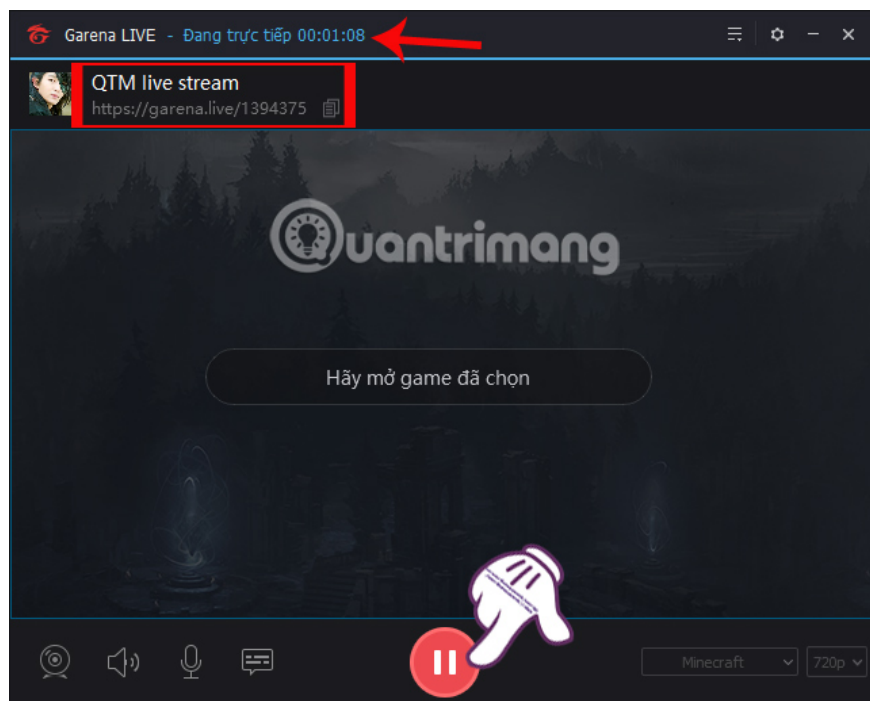

In addition, Garena Live also supports chat frames when streaming games. We choose to select the **Show chat in game option**. Users will see the chat frame on the interface. This chat frame can be moved.

Step 6:

At the live stream screen on Garena Live, the top will be the time when we are recording live video. Below, gamers can change the name of the streaming video if desired. **The next link garena.live** helps players send via Facebook, Twitter, Instagram, . so friends can follow the game screen where we are playing live stream.

To stop video game recording directly on Garena Live, we click the red circle icon at the bottom of the interface as shown below.

Step 7:

Also at this interface, to change some settings for live video game playback, users click on **the gear icon** .

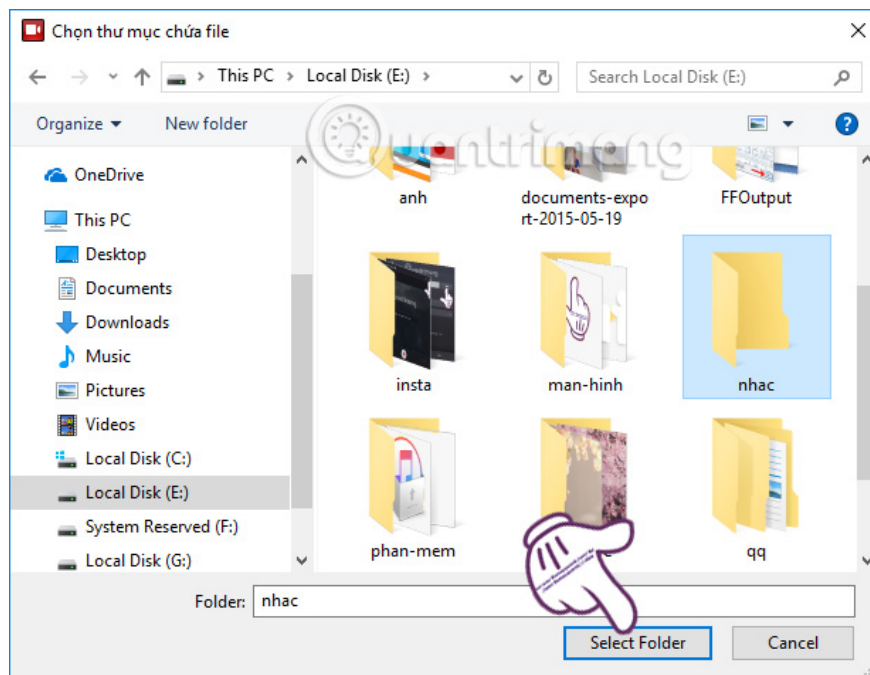

Step 8:

Appearing the Garena Live Installation frame, the user will see the path to save the file with the default directory that Garena Live has set up. To change the folder to save this video game, click on **the Search button**.

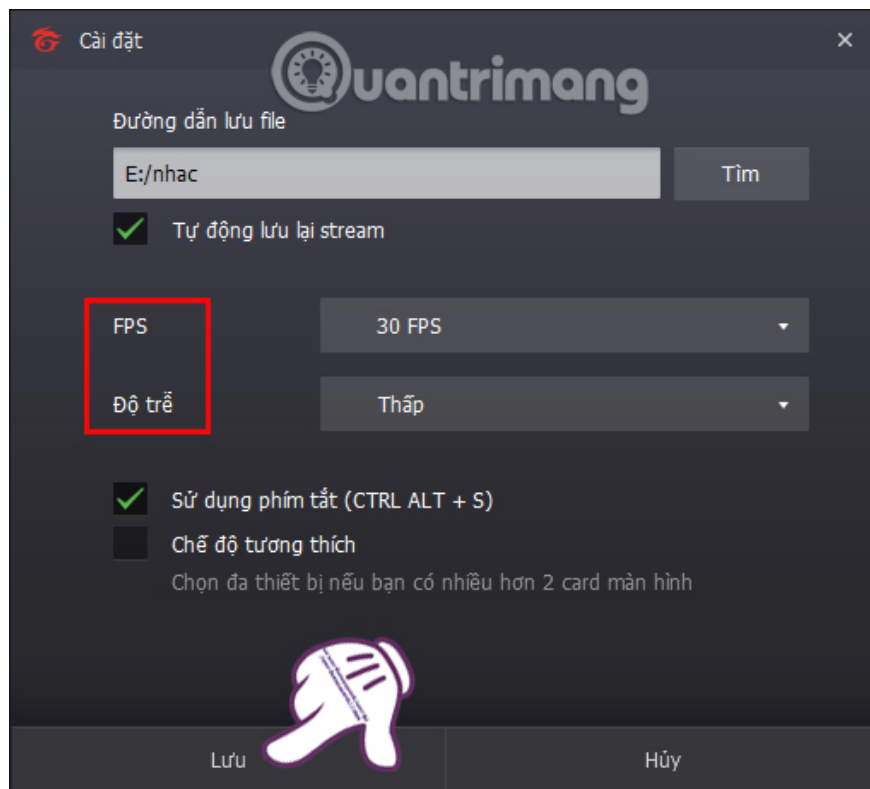

The folder interface appears on the computer. The players select the folder to save the live stream video, click on the folder and click **Select Folder** .

Step 9:

Back to the Settings interface you will see the folder where the video is saved has been changed. Next, if you want to save the file automatically, select **Automatically save the stream** . Besides, we can change **FPS** and **Latency** to make the game video stream smoother.

If you do not want to use the keyboard shortcut **Ctrl + Alt + S** to conduct a live video recording, skip the check box at **Use shortcut (Ctrl Alt + S)**. Finally to save all changes, users click on the **Save** button to complete the new settings.

The above is a basic guide for conducting live video, live streaming games on your computer using Garena Live feature of Garena tool. In addition to supporting game streams from computers, Garena Live also supports many other attractive features to players. During live stream playback, players need to ensure that the Internet connection is working properly.

Wish you all have fun playing games!
