

# How to stretch line spacing in Google Docs

Google Docs is an application that includes text-based data processing tools built on Google's web 2.0 and cloud computing platform. We can use tools including Document, Spreadsheet, Presentation and Form to edit documents, spreadsheets, or presentations on Google.

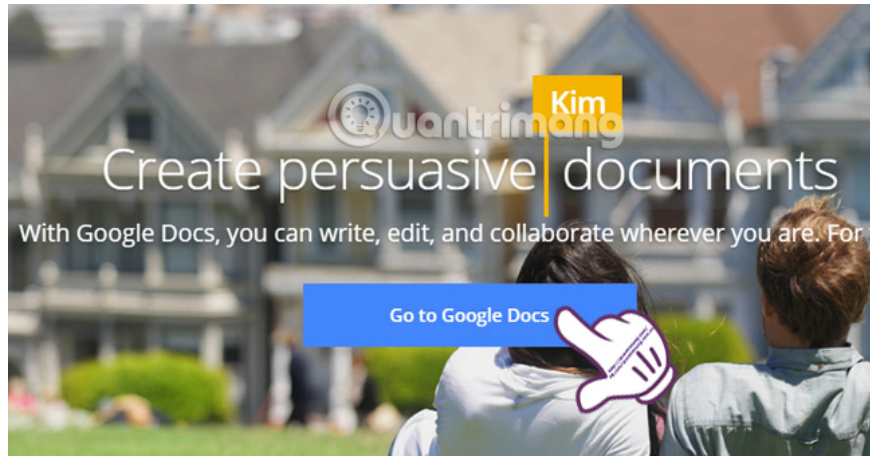

Google Docs is an online office suite that processes text data and presentations, including: Document, Spreadsheet, Presentation and Form. Any documents created will be automatically stored on Google's server system with the user's account.

While editing on Google Docs, some tips will help your text be presented more beautifully, such as line spacing. For first-time readers who work with Google Docs, or do not know how to stretch the line, you can follow the tutorial below of Network Administrator.

## Step 1:

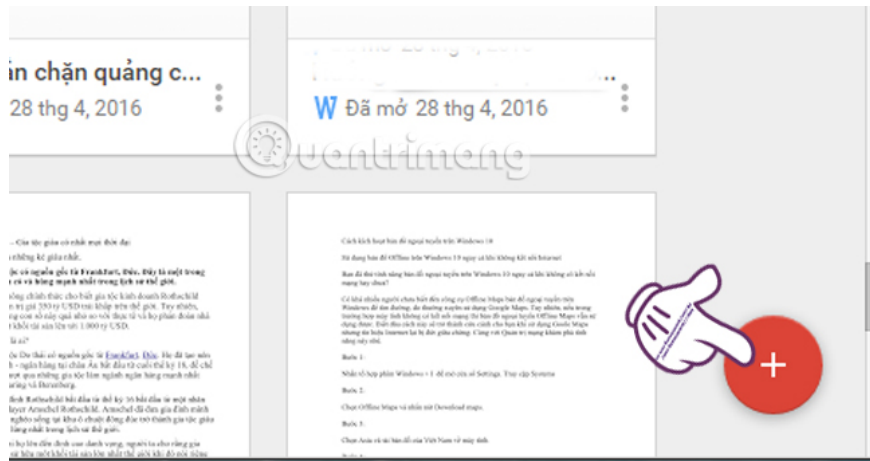

First of all, log in to Google Docs using the link below. Then click on the word Go to Google Docs.

<https://www.google.com/docs/about/>

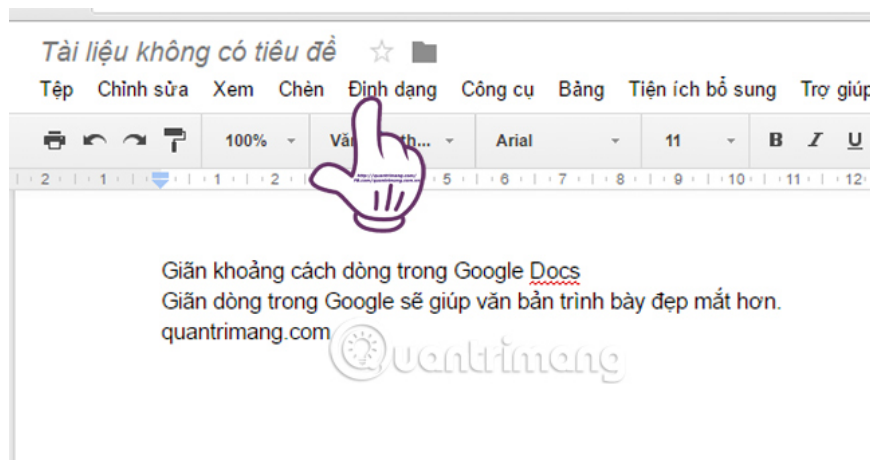

## Step 2:

Next, **log in to your Google account** so you can use Google Docs. At the main interface of Google Docs, click **the plus sign icon to the right of the screen** to open a new Google Docs file.

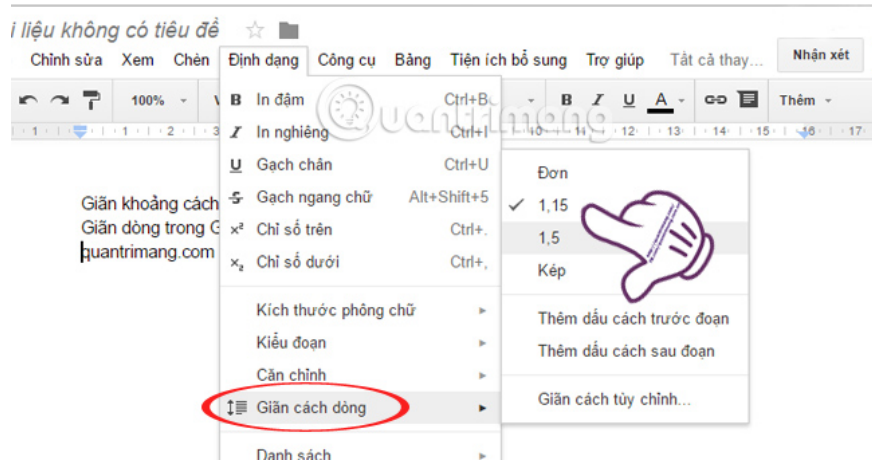

### Step 3:

You proceed to **edit the text** as usual. **Black out the text** and press the Format button above to perform the line stretching.

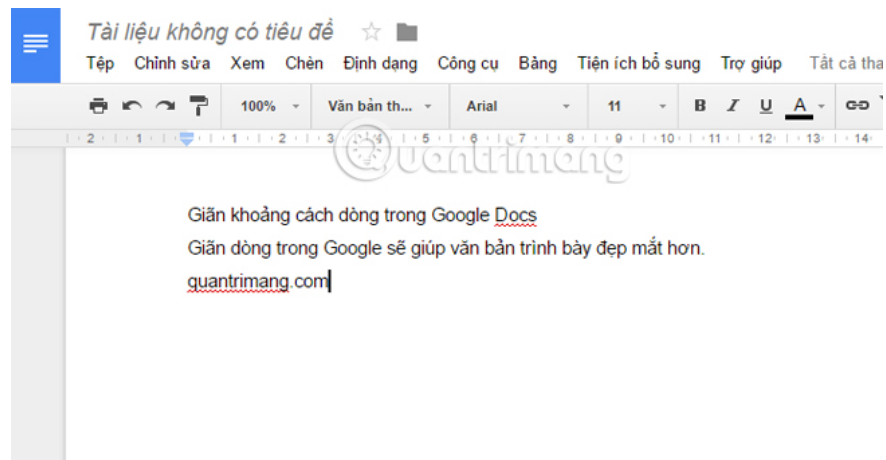

### Step 4:

Appears multiple custom lists for text. We select the Line Spacing section. The normal line spacing on Google Docs is 1.15, but you can click the distance 1.5.

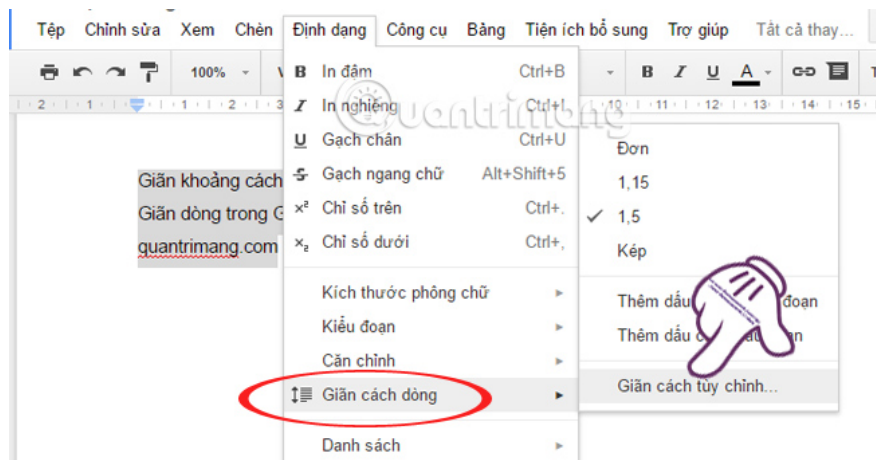

## Step 5:

The result of the text after stretching the line will look like the image below.

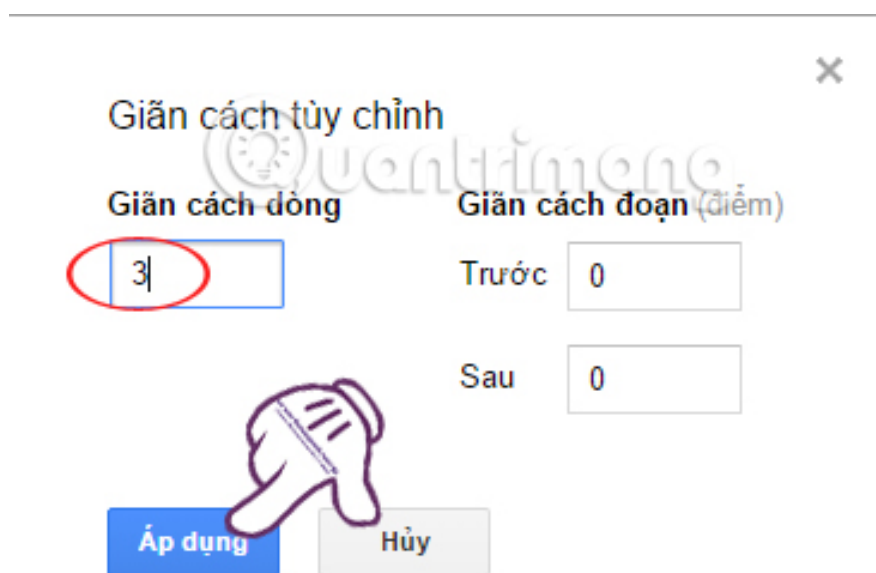

## Step 6:

To **increase the distance between lines**, you also go to Format, select Line Spacing. Here, we will select Custom spacing.

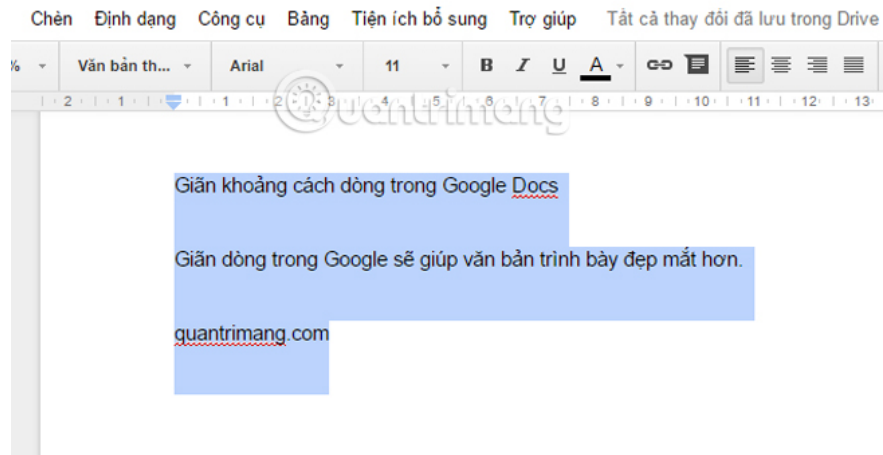

## Step 7:

Next, we will **enter the optional spacing line**, eg distance 3. Then click Apply to save the new line spacing.

You will see that the line spacing is much larger than the original.

With simple operations, it is possible to adjust the line spacing in Google Docs, depending on the purpose and layout of the text content. The text looks better, right ?!
