

How to sync notifications from Android to Windows 10 Creators

Cortana virtual assistant on Windows 10 Creators has the ability to sync notification content from Android device to a computer, so you can manage and view notifications right on your computer.

Virtual assistant Cortana on Windows 10 computers in addition to the ability to help users search via voice, but also the ability to sync notification content from an Android device to a computer. Thanks to this feature, users can view the Android device's new notification directly on the computer, without opening the mobile. If you have upgraded your computer to Windows 10 Creators and want to sync your messages from Android to your computer, you can refer to the article below.

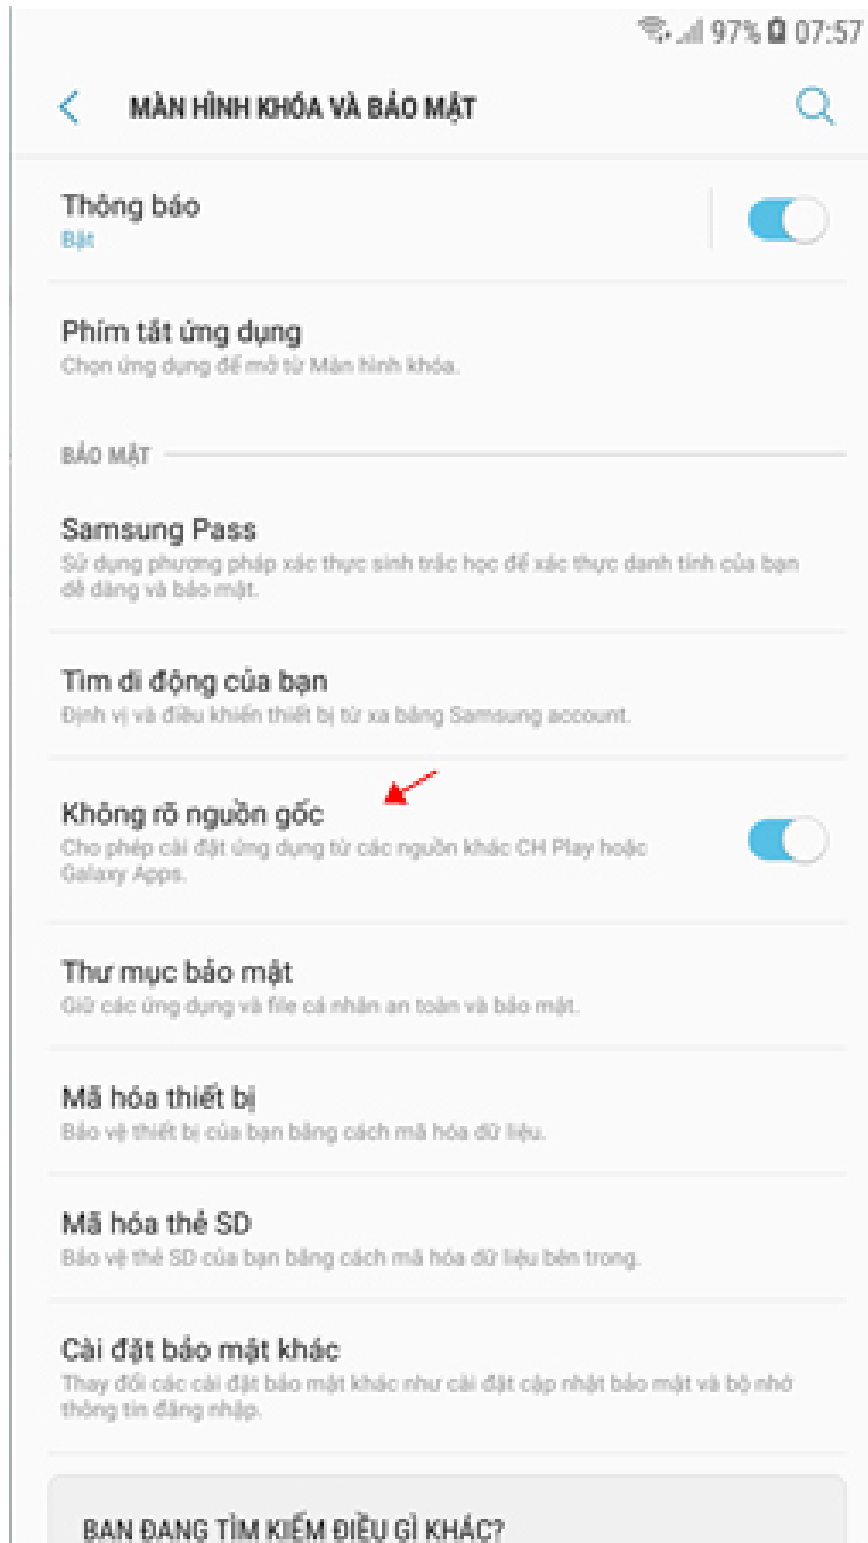

Step 1:

First, users will download the latest APK installation package for Cortana to the computer according to the link below.

1. <http://www.apkmirror.com/apk/microsoft-corporation/cortana/>

Step 2:

Once you've downloaded the Cortana installation package to your computer, we'll copy this file to your Android device. After that, the user presses **Settings**> **Security** and activates the **Unknown source** feature to allow the device to install the application from the APK file package.

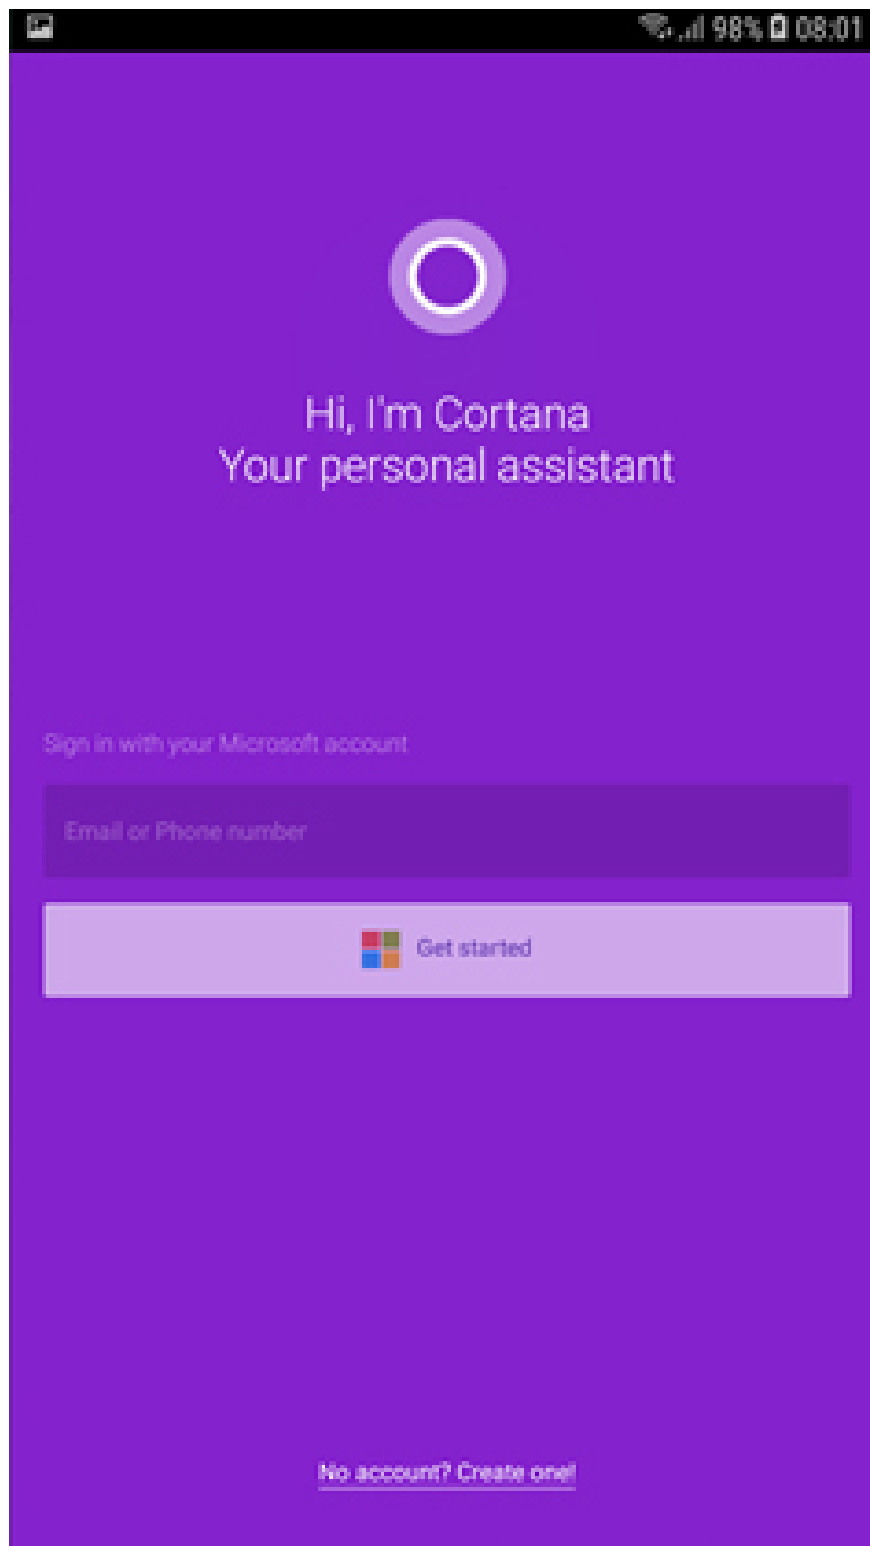

Step 3:

We will proceed to install Cortana virtual assistant from this APK file. When the interface appears as shown below, click **Install** to continue.

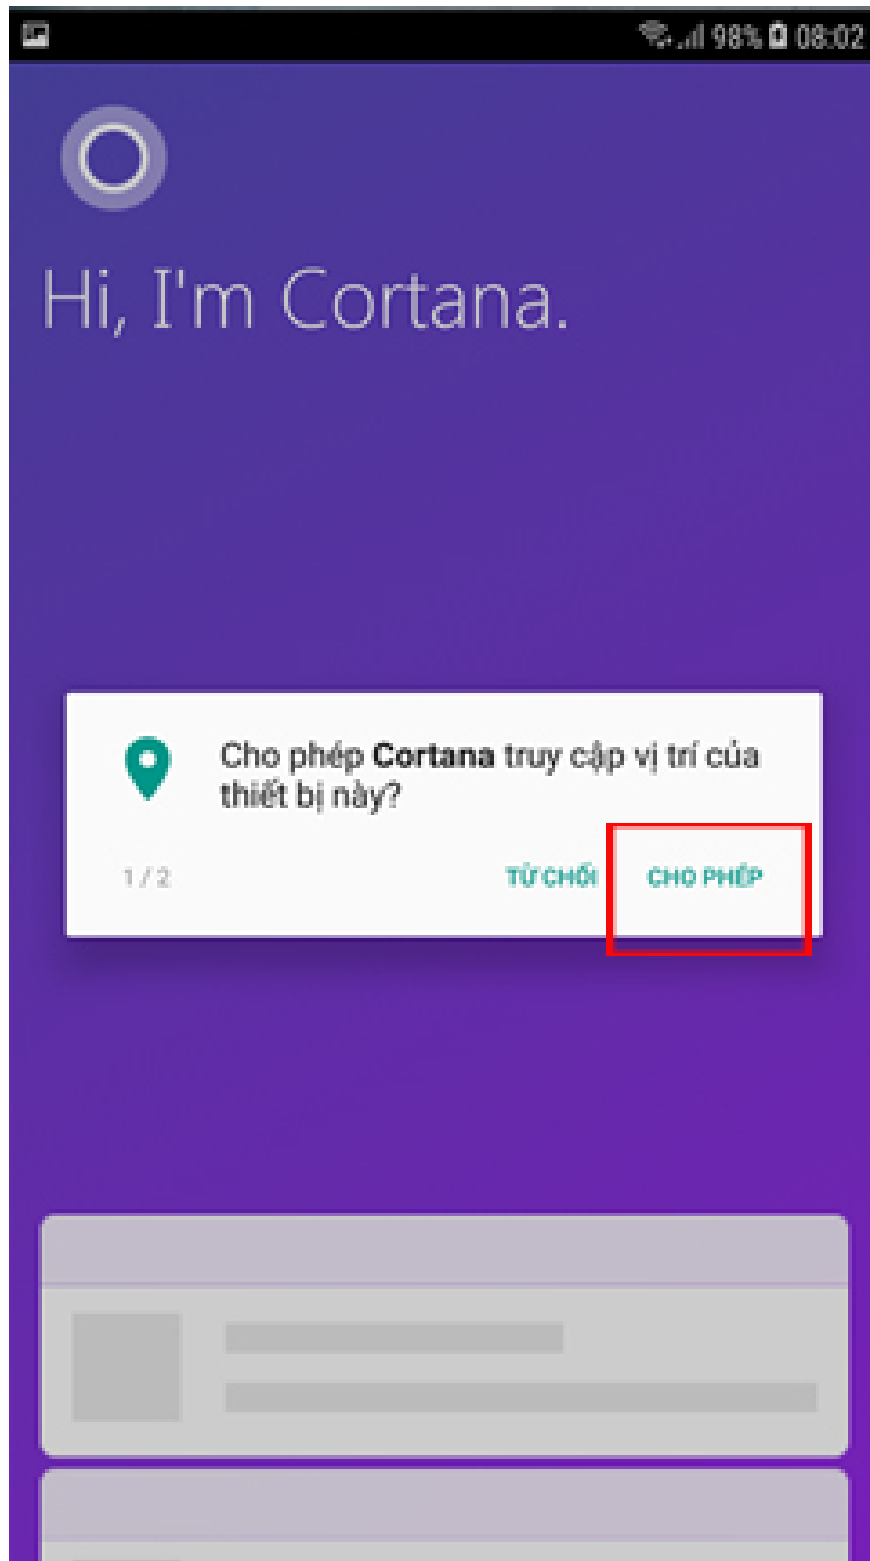

Step 4:

When the settings for Cortana on Android are completed, the user starts the application. At the virtual assistant's main interface, you **log into the Microsoft account you** are using on your computer to the Android interface.

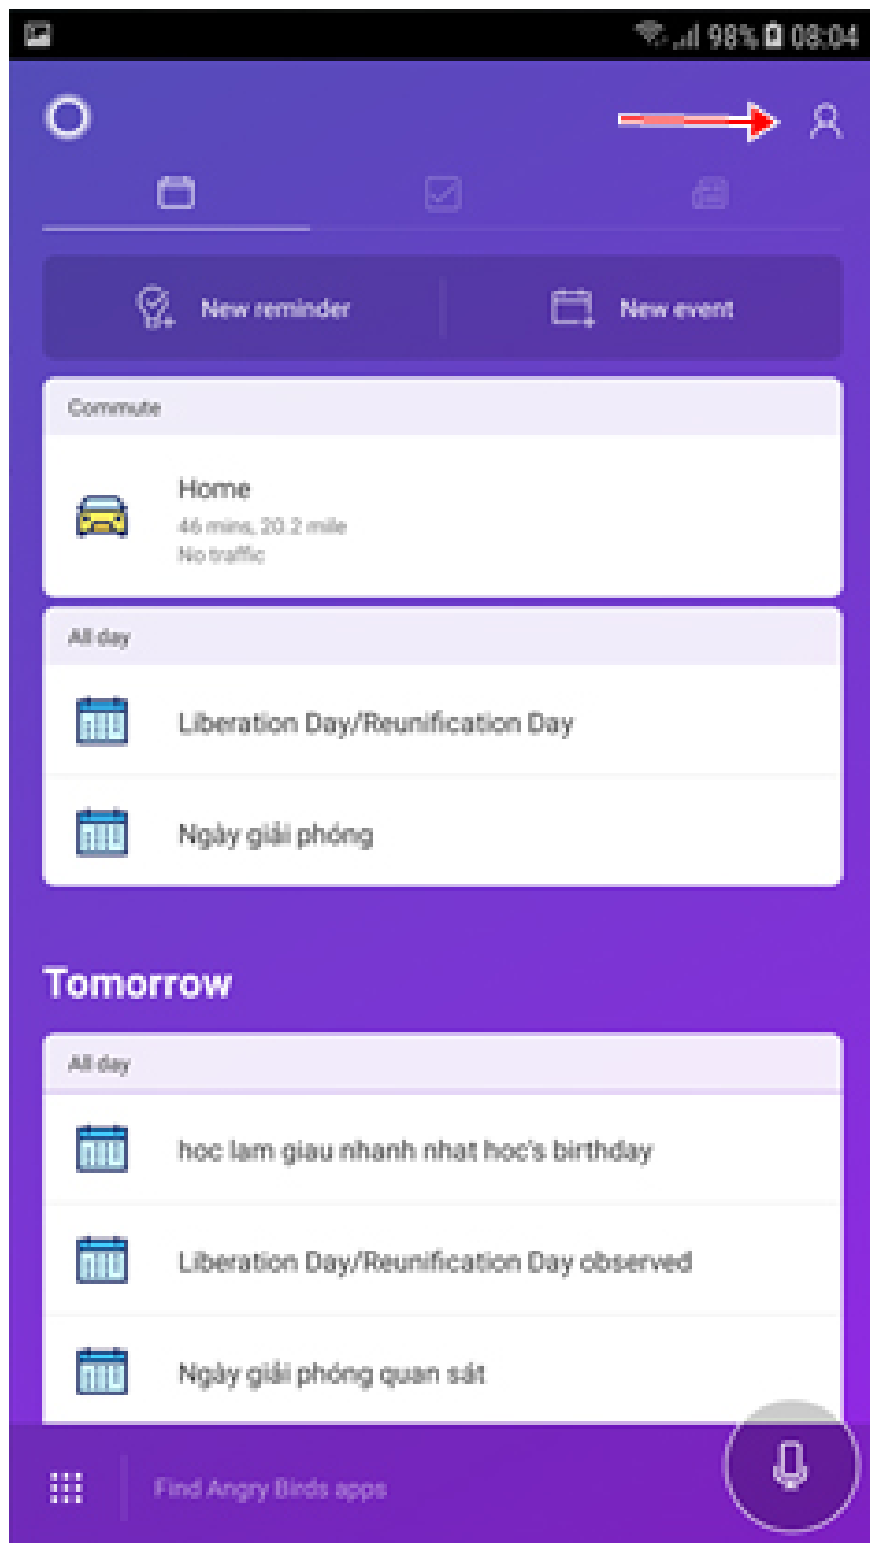

Step 5:

To be able to use Cortana again, you need to provide some access to personal data, click **Allow** .

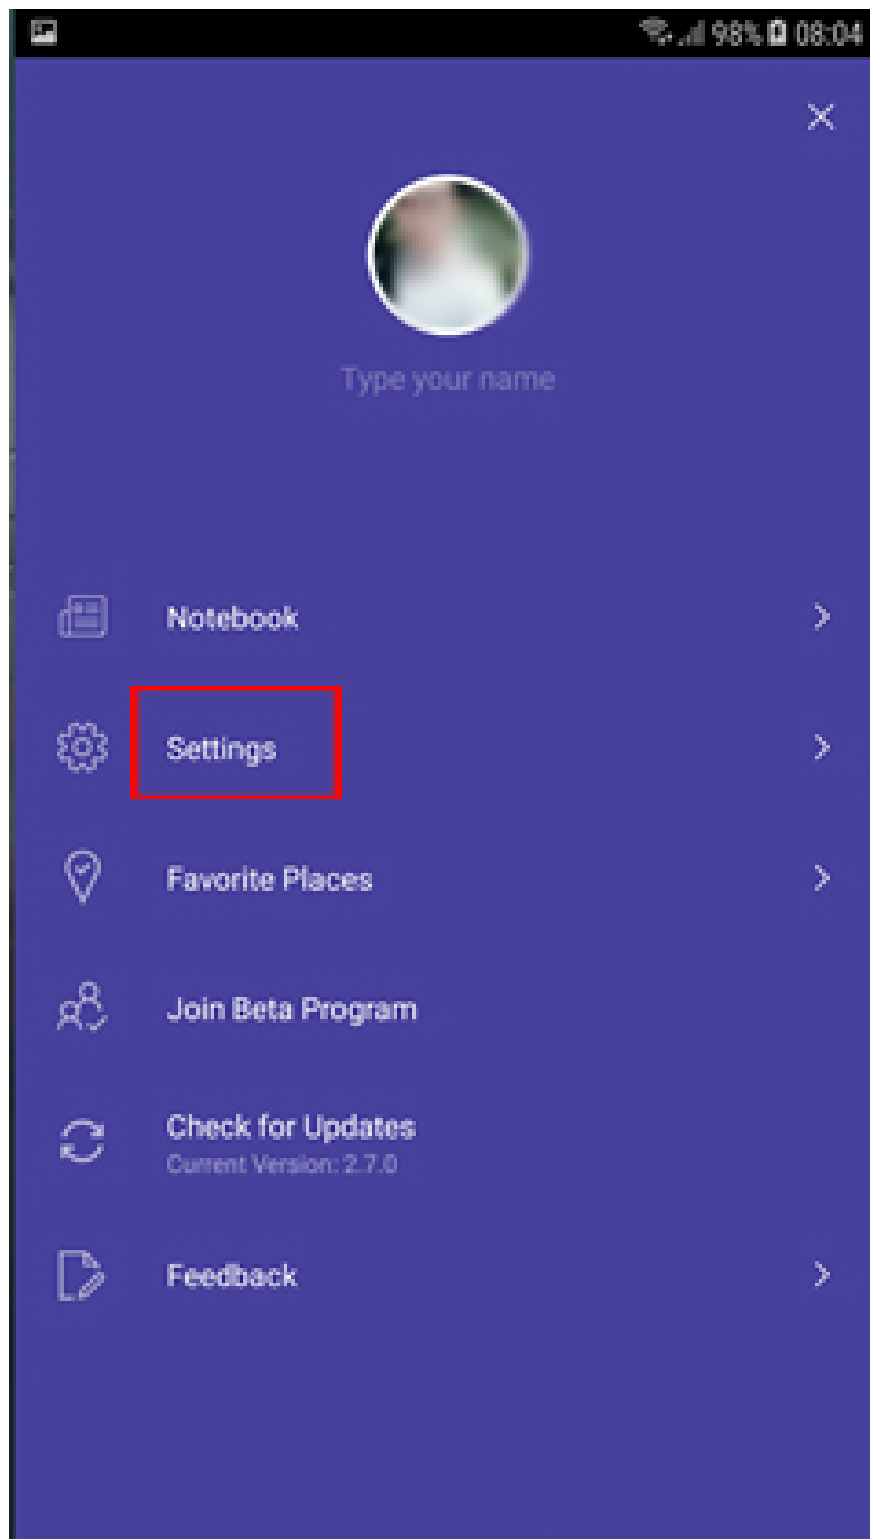

Step 6:

Soon the main interface of the virtual assistant Cortana on the phone appears. Here, users click on **the human icon** in the top right corner of the interface.

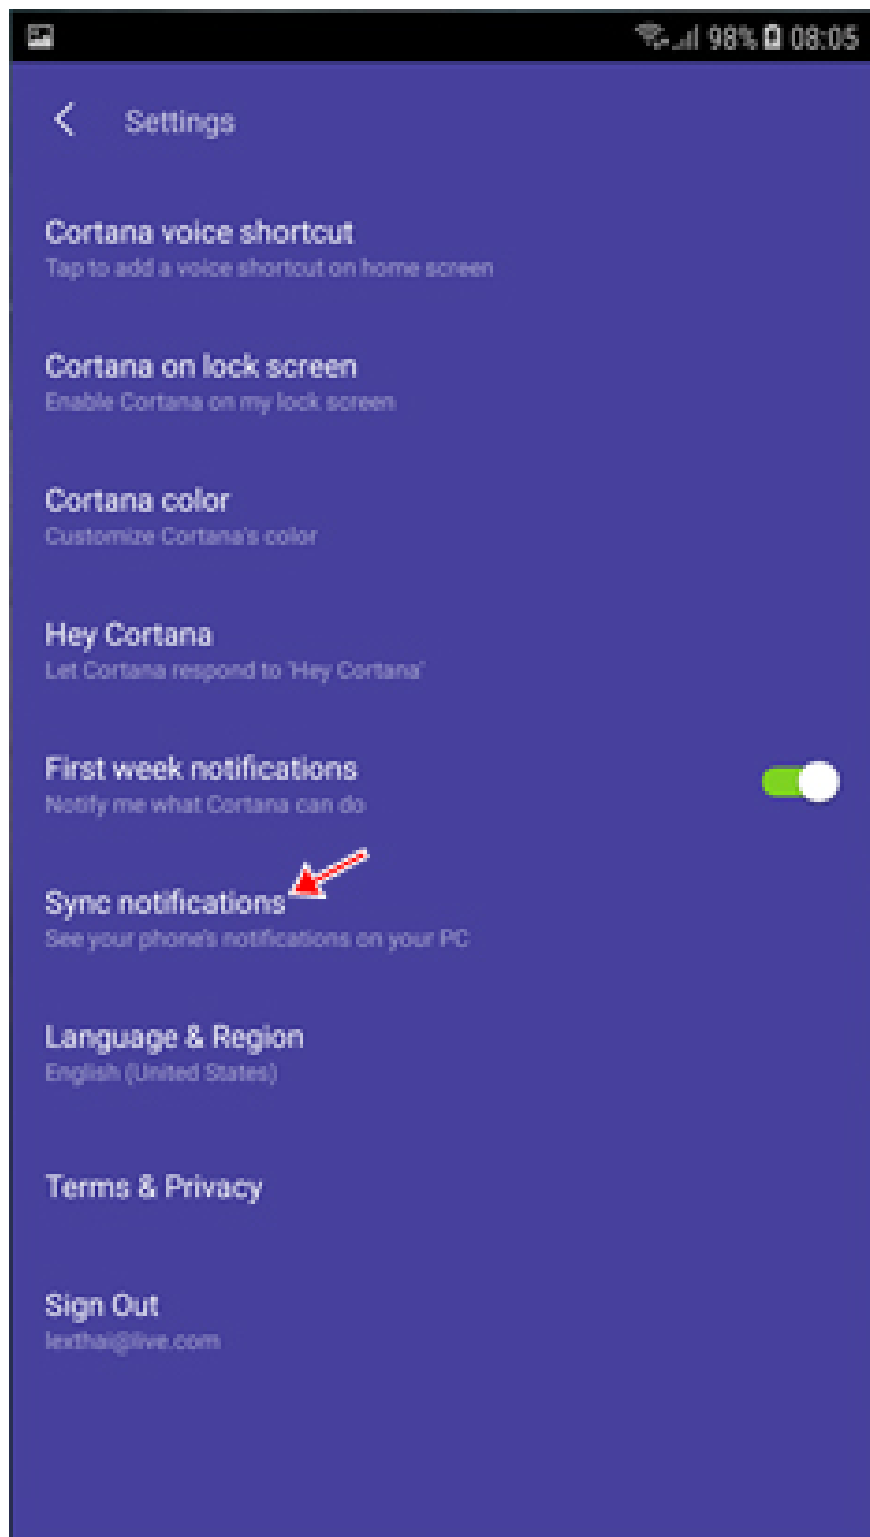

Step 7:

Next, click **Settings** to install Cortana.

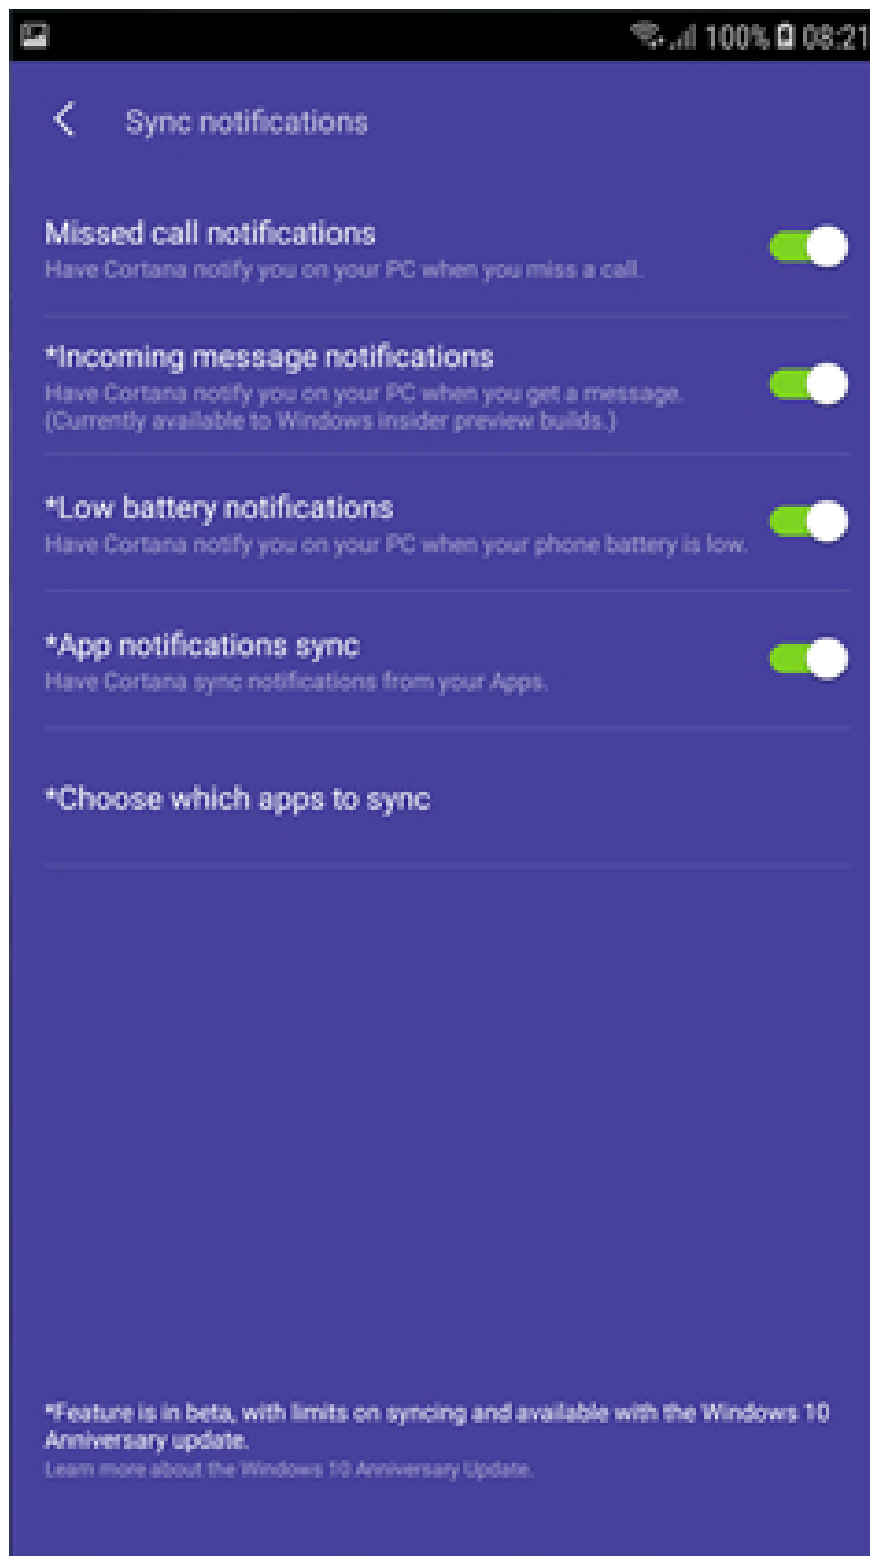

Step 8:

In the installation list, click on the **Sync Notifications** option.

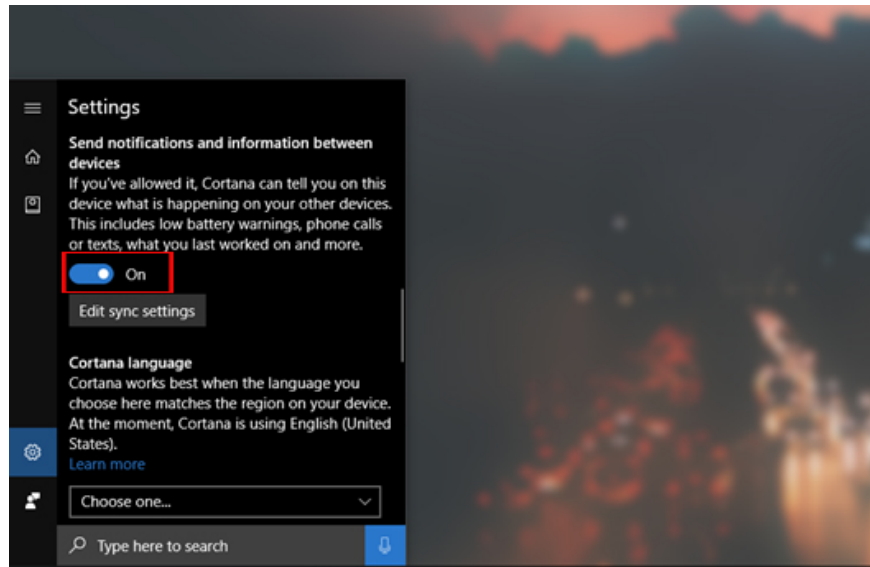

Appearing notification options on Android device, users will push all **horizontal bars to the right** to turn ON mode and receive all notifications on the computer.

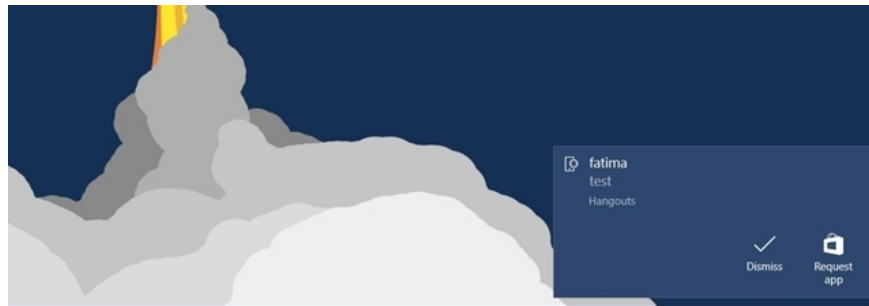

Step 9:

At the interface on Windows 10 Creators computer, call **Cortana virtual assistant** and click **Settings** . Next to the user find the **Send notifications and information between devices option** and switch to **On mode** to activate.

Finally, you just need to wait for the message to be sent to the computer.

A simple and useful way to be able to view all Android device notifications right on your Windows 10 Creators computer. The message will appear in the Action Center interface on the computer.

I wish you all success!
