

How to take screenshots of computers and laptops 2024

The fastest and simplest way to take a screenshot of a computer screen is a method that users are especially interested in, helping to save images or share information with others when needed. Below are ways to take screenshots of Macs, laptops, and desktop computers in 2024. Please refer to them.

For people who do not regularly use computers and are not tech-savvy, taking a **screenshot of a computer screen** is difficult. And if you are wondering how to take a screenshot of your computer screen quickly and simply without installing 3rd party software, follow Taimienphi.

I. Why take a screenshot of the computer screen in 2024?

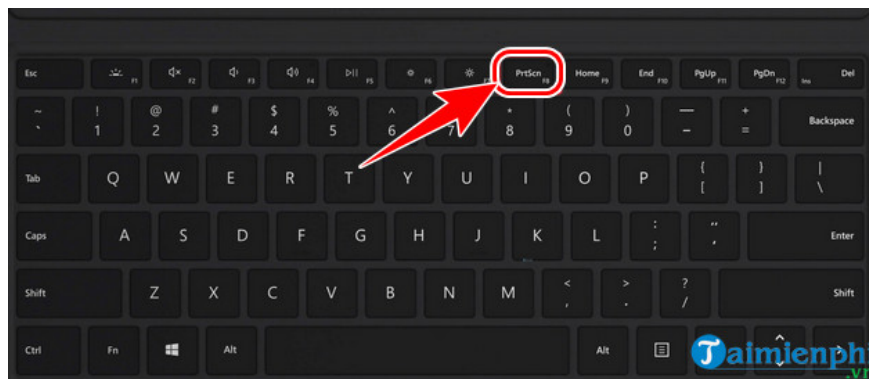

- Allows you to save all or part of the image displayed on the computer screen.
- Save important information and data to review when needed
- Share with other users.
- Serves work and personal purposes.

II. The fastest way to take a screenshot of your computer in 2024

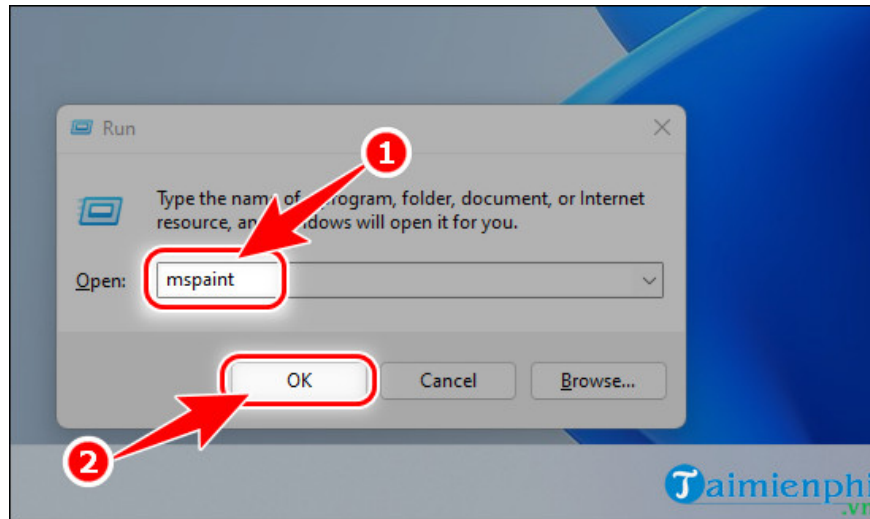

1. Take a screenshot of the entire computer or laptop screen

This method allows you to capture everything displayed on your computer screen as quickly as possible, saving images in many different formats such as JPEG so that the image size is not too heavy.

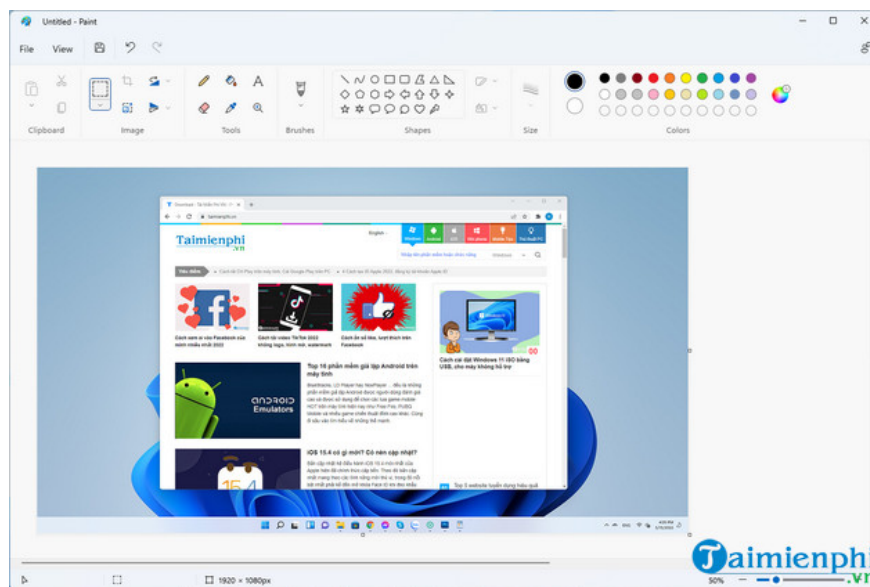

- *Step 1:* Press the **PrtScn** (Print Screen) hard key on the computer keyboard.

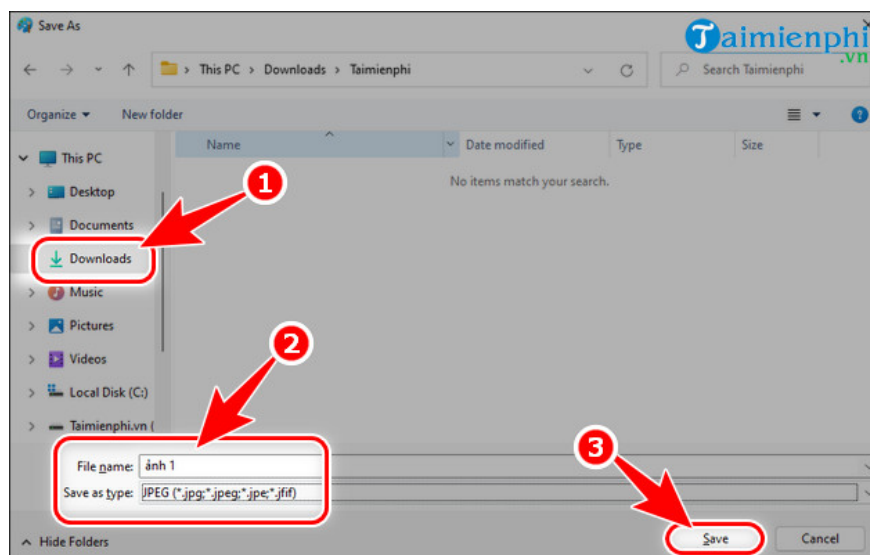

- *Step 2:* Next, open **Paint** on your computer
- + **Quick opening tip:** Press the **Windows + R** key combination , enter **Mspaint** => click **OK** .

- Step 3: Then press **Ctrl + V** to **Paste** .

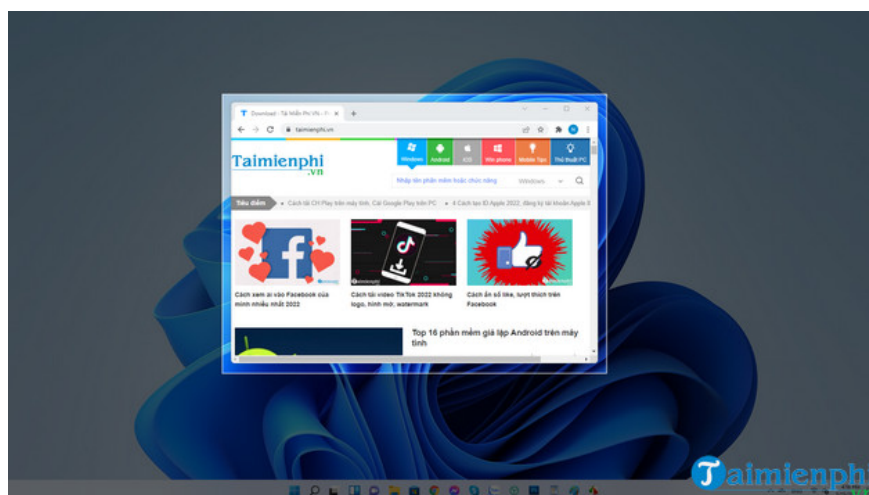

- Step 4: Press the key combination **Ctrl + S** => select **the save location** , **image file format** and click **Save** . +
For example: Taimienphi saves images in the **Download**
folder , named **Image 1 and JPEG** format . Taimienphi recommends that you choose the JPEG image format so
that the image size is not too heavy and can be shared with others more quickly.

2. Take a part of the computer or laptop screen

With this method, you can capture the necessary partition without having to capture your entire computer screen, without having to remove the excess parts. How to capture a specific partition or part of the computer screen as follows:

- *Step 1:* Press the key combination **Windows + Shift + S** on the computer keyboard.
- *Step 2:* **Left** click and **drag and drop** the area of ??the screen you want to capture.

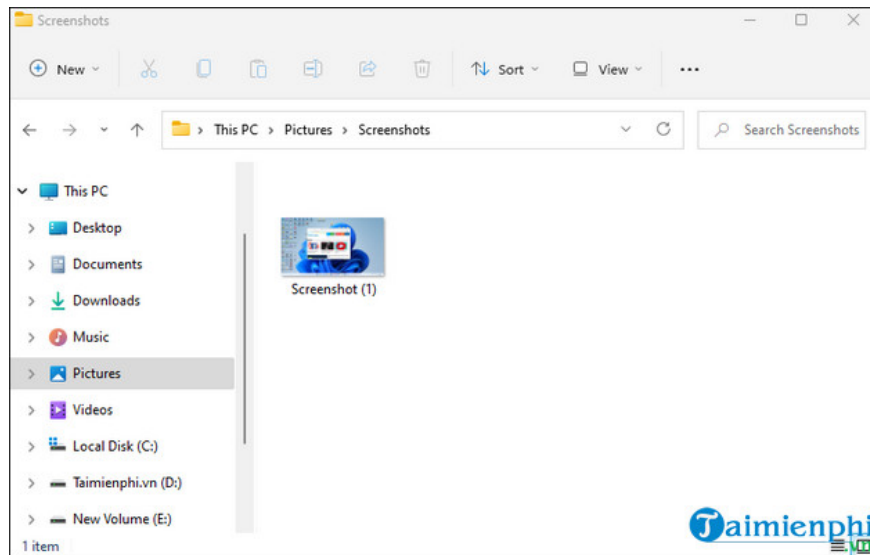

- *Step 3:* Open **Paint** on the computer, press **Ctrl + V** => **Ctrl + S** => select **the save location** , **image file format** and click **Save** .

3. Take a screenshot of your computer and save it yourself

With this method of taking self-saved computer screen shots, you will have another option in taking computer screen shots without having to waste time on Paint, Paste and Edit as in the 2 steps above. However, the weakness of this method is that the saved image size is too heavy with the PNG extension.

- *Step 1:* Press the key combination **Windows + PrtScn** , the photo will automatically save on the computer.
- *Step 2:* Go to **My Computer** (This PC) => **Pictures** => **Screenshots** .

+ Automatically saved computer screenshots are called **Screenshots**
