

How to take screenshots Win 10 fastest and simplest

One of the most important tools that is not needed is screen capture. For Windows 10, the manufacturer adds an extremely convenient photography tool. In this article, Software Tips will guide you on how to take screenshots of Windows 10 quickly and easily.

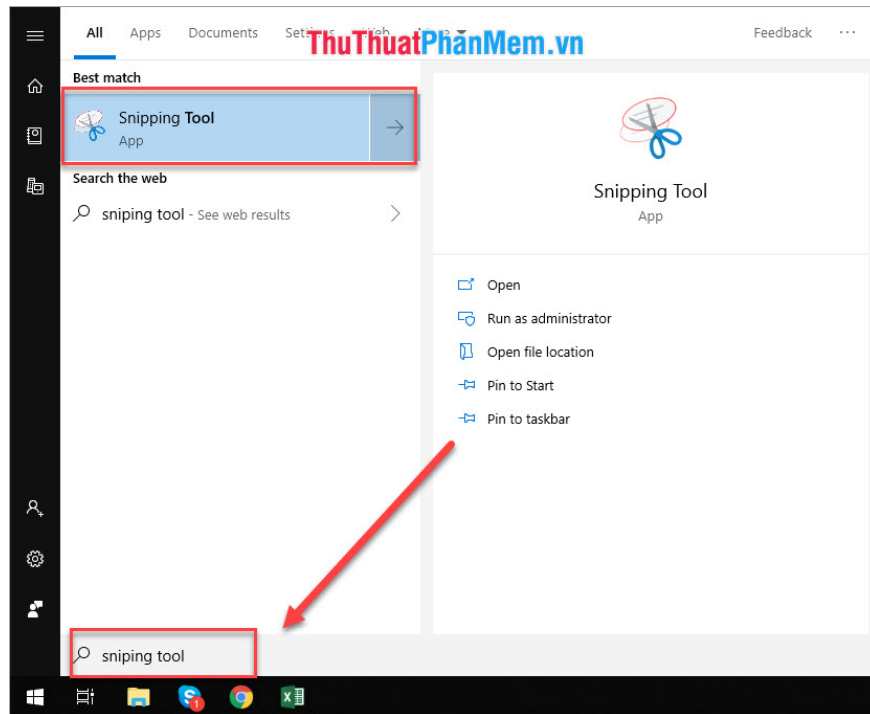

On Windows 10 operating system, there are many tools and features built in to support users to experience and work great. One of the most important tools that is not needed is screen capture. For Windows 10, the manufacturer adds an extremely convenient photography tool. In this article, Software Tips will guide you on how to take screenshots of Windows 10 quickly and easily.

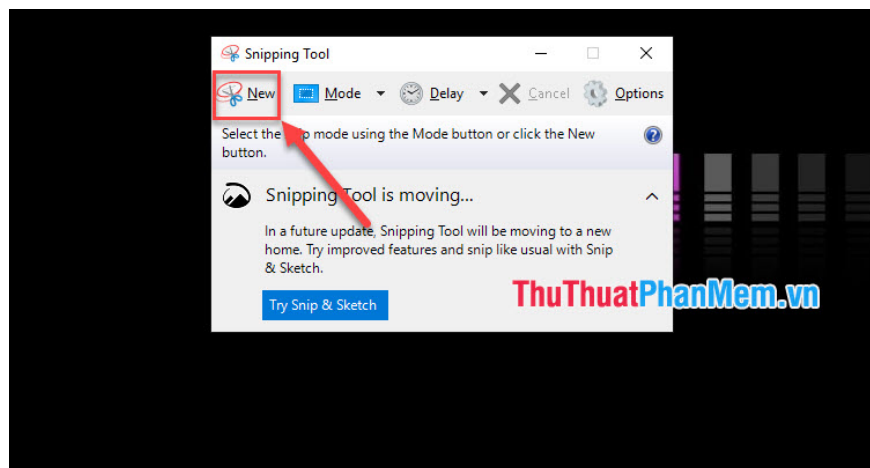

1. Use the Snipping Tool

Snipping Tools is a completely new tool on Windows 10. This is an application available on Windows 10 in any version. Windows manufacturers added the Snipping Tool to support users to take screenshots faster. But the Snipping Tool is not available on the main screen, if you want to use it, do the following:

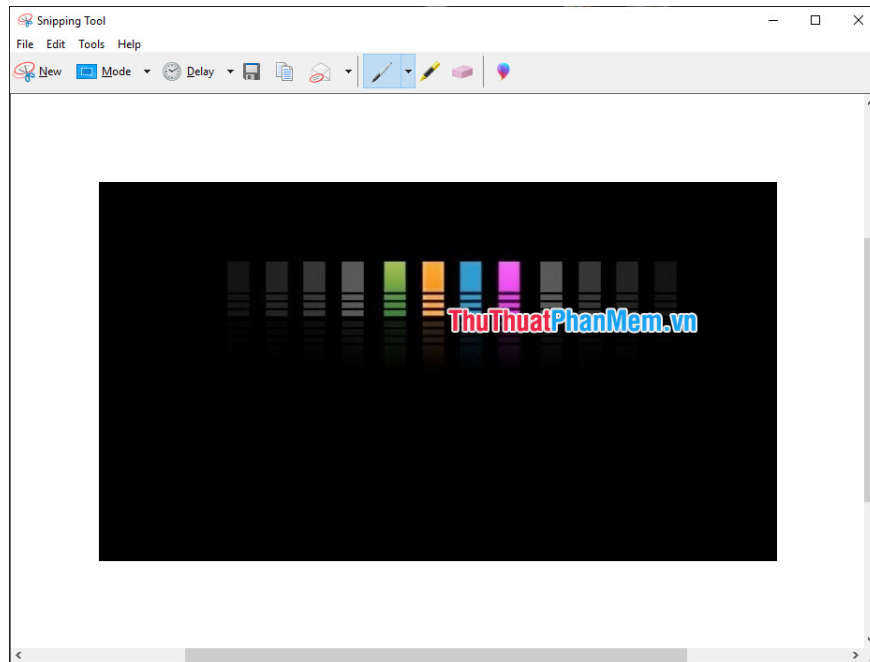

Step 1: Open the **Start** bar and enter *Snipping Tool* to open **Snipping Tool** .

Step 2: When the **Snipping Tool** software opens, select **New** to take a screenshot.

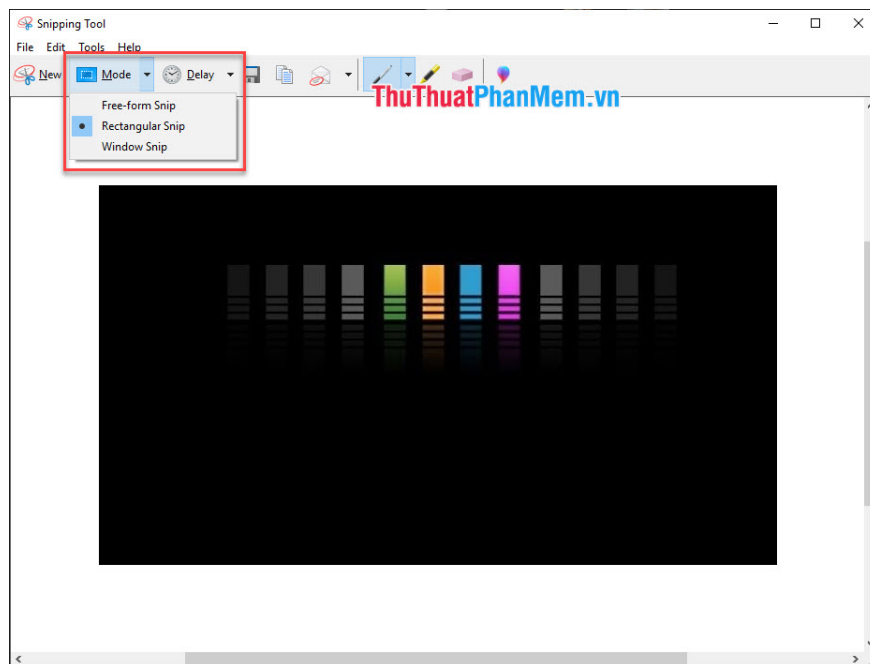

Step 3: Then you drag to select an area on the computer that you want to capture. The screen image of the computer will be captured.

Step 4: If you need many different types of shooting you can choose **Mode mode** .

1. Free-form Snip: Free-form shooting
2. Rectangular Snip: Capture square and rectangular frames
3. Windows Snip: Take a picture of the window

Step 5: After obtaining the image you like, press **Ctrl + S** to save.

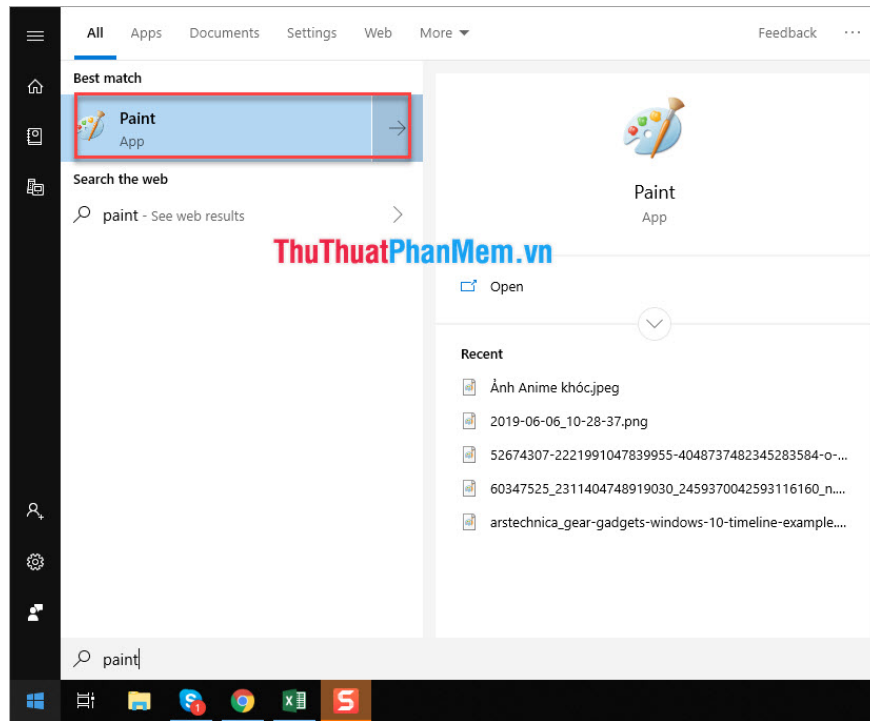

2. Use the Paint tool

If you've been using Windows since earlier versions, you're probably familiar with this approach. If you don't require a lot of shooting options, this is a very reasonable way.

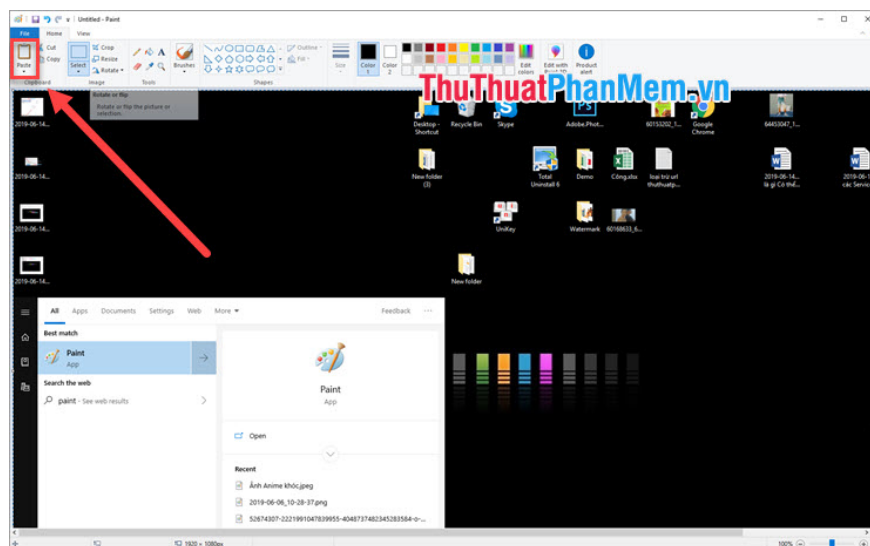

Step 1: You press the **Print Screen** key on your keyboard to proceed with the screenshot.

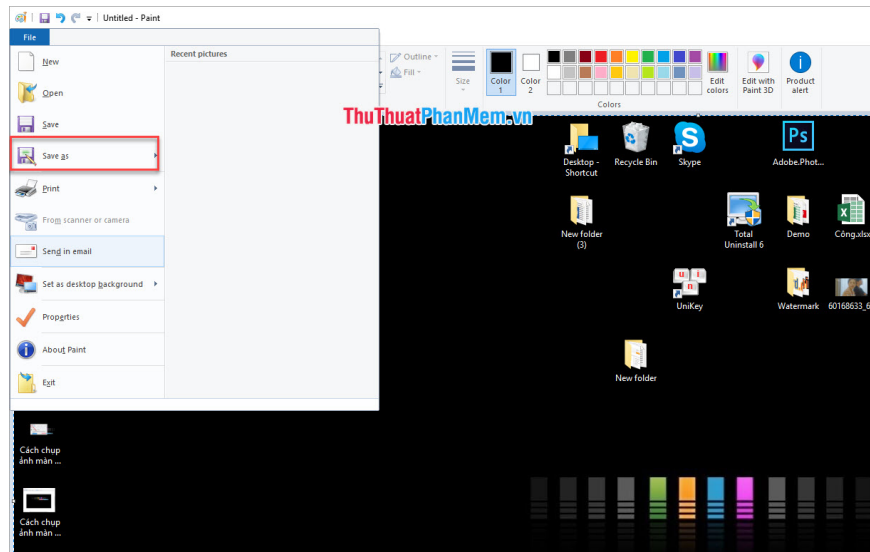

Step 2: Open the Paint tool by entering *Paint* in the **Start** bar .

Step 3: When the Paint window appears, press **Ctrl + V** to paste the image just taken here. Or you can press the **Paste** key on the toolbar.

Step 4: Finally, you can save your screenshots by pressing **Ctrl + S** or clicking **File -> Save As** .

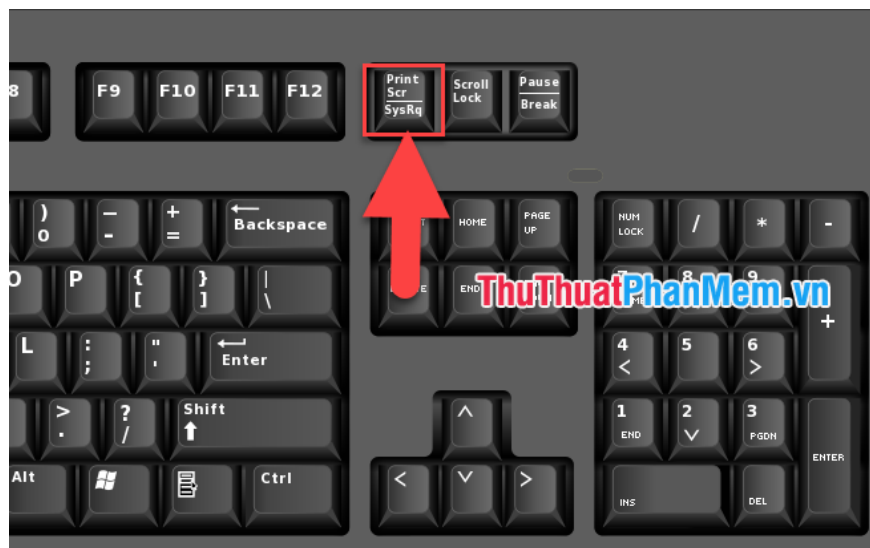

3. Take photos using Snagit tool

Snagit is an extremely famous software with many features of computer screen capture. Snagit is now easier to use and much faster than before. You can download the software here to use <https://www.techsmith.com/screen-capture.html>

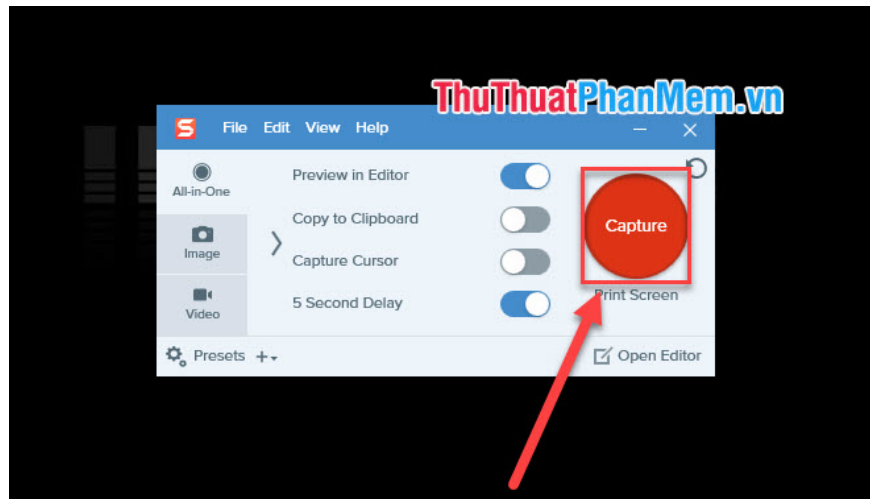

Step 1: For **Snagit** you only need to install it once, the next time you start your computer, Snagit will run in the background. Just press the button to take a picture.

Step 2: To take photos with **Snagit** you have two ways.

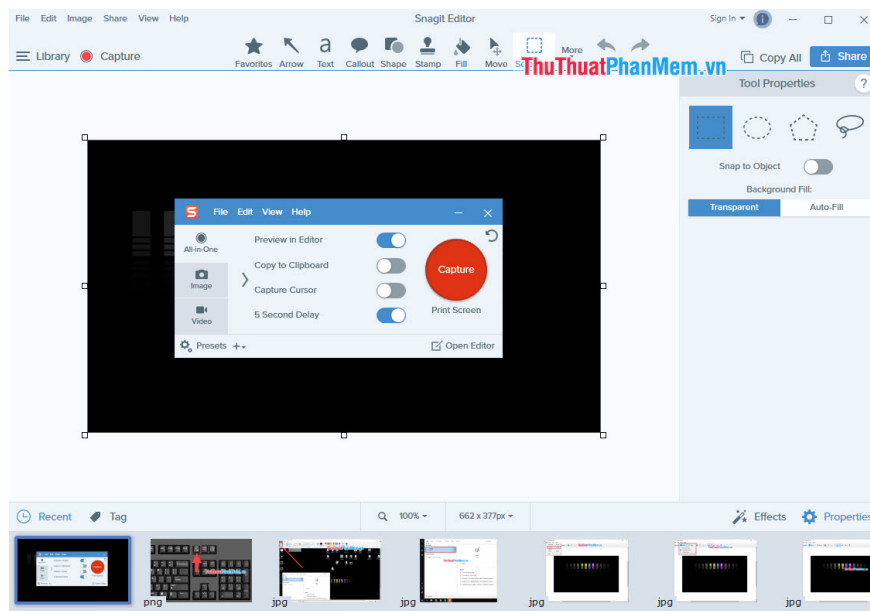

Method 1: You press the **Prt Screen** key on the keyboard.

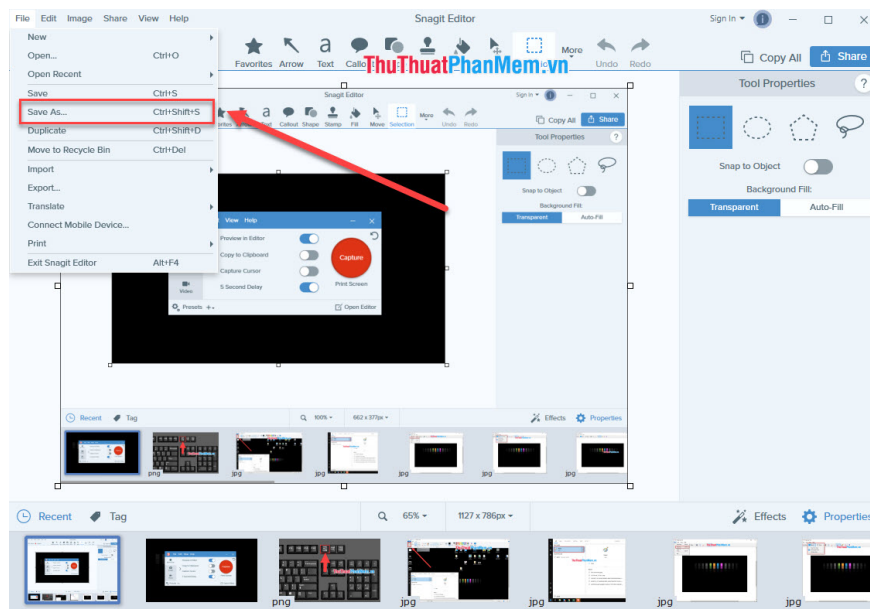

Method 2: You press the **Capture** key on the software.

Step 3: Then you drag a selection on the computer screen for software to take photos. After taking a picture, you can use Snagit software to edit the image.

Step 4: After you're done, proceed to save your image by selecting **File -> Save As** .

Thus, the software tips have shown you how to take screenshots of Windows 10 quickly and easily. Good luck!
