

How to take water out of iPhone speakers using Siri Shortcuts

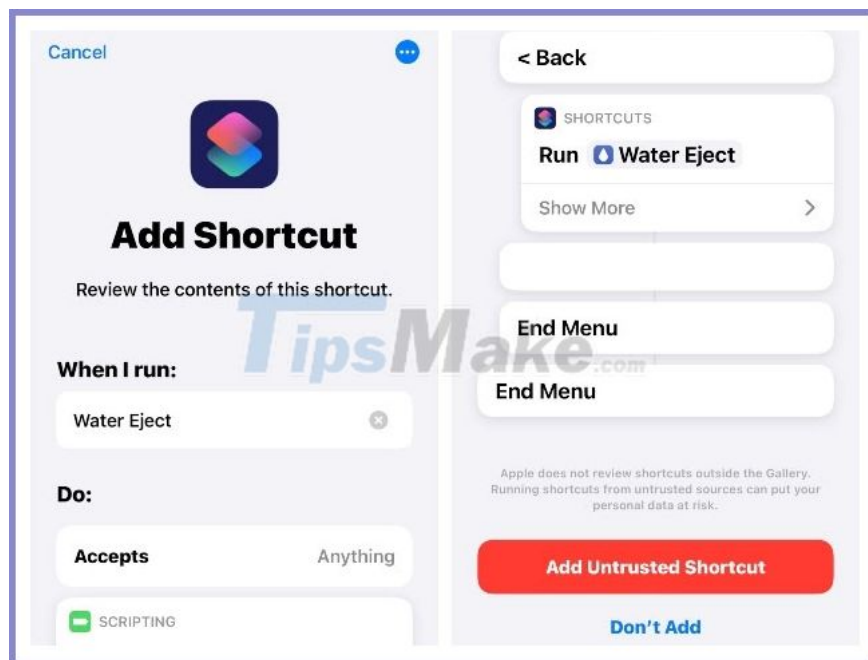

In this article, we will show you how to use the convenient Siri shortcut to take water out of your iPhone speaker with very low frequency sound.

Many people love to bring their smartphones into the bathroom to listen to their favorite songs. Therefore, the phone is often splashed with water. These water droplets flow into the speaker slots at the bottom of the device. There is a solution for getting water out of the speaker which will come in handy in this case.

How to drain water from iPhone

This nifty Siri shortcut, called **Water Eject**, helps you protect your smartphone, and here's how you can use it.

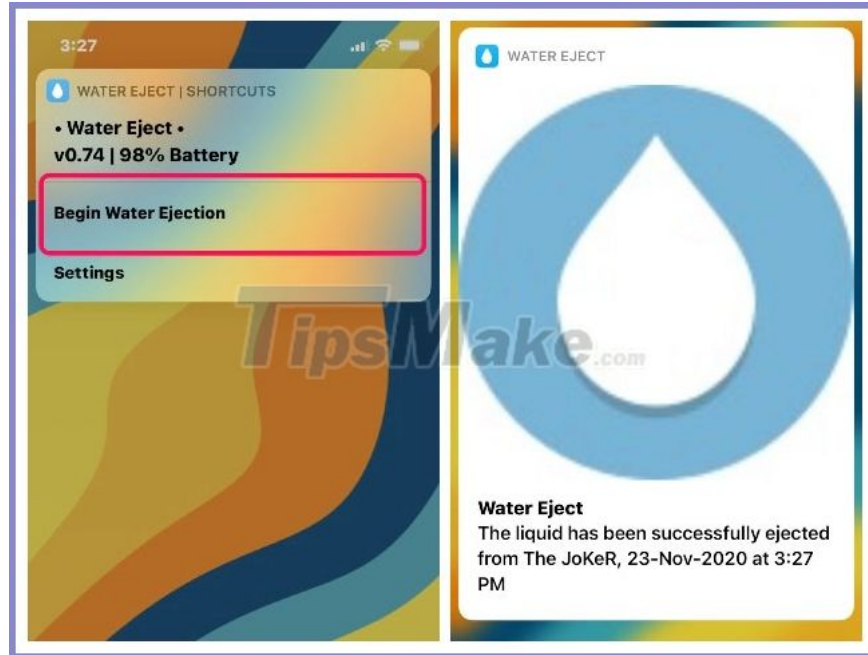

1. Click this link [here](#) on your iPhone to open the '**Water Eject**' shortcut .
2. When the shortcut opens in the **Shortcuts** app , scroll to the bottom of the page.
3. Here you will find a button to add a shortcut.

Note : This is an untrusted shortcut and requires you to enable '**Allow Untrusted Shortcuts**' from device settings.

1. After adding shortcut to gallery, tap on it to get started on your device.

2. From the drop-down options, select '**Begin water ejection**' and wait for the process to complete.

Siri shortcut will lower the volume of the device by 50% and send a notification of completion to the user

Once completed, the Siri shortcut will lower the volume of the device by 50% and send a notification of completion to the user.

Now, since this is Siri shortcut, you can add it to the home screen for easier access. Or else, you can always ask Siri to run " **Water Eject**" and the process will begin.

In addition to working on all iPhone models that support Siri shortcuts, the tool also works with iPads and iPods running the latest software.
