

# How to test usb boot after creation is successful or not

After each creation of a USB boot, we always wonder whether the USB boot has successfully been created and can be used or not. Usually we only know if the USB boot has been successfully created or not when used, but in this article, we will

As you know we often create a USB boot to install windows, ghost win, fix errors, restore data . etc. And after each creation of a USB boot we always wonder whether the USB boot has been successfully created. not yet available and usable or not. Usually we only know if the USB boot has been successfully created or not when using it, but in this article, TipsMake.com will guide you how to check whether the USB boot is working or not in the environment. school windows. Invite you to refer.

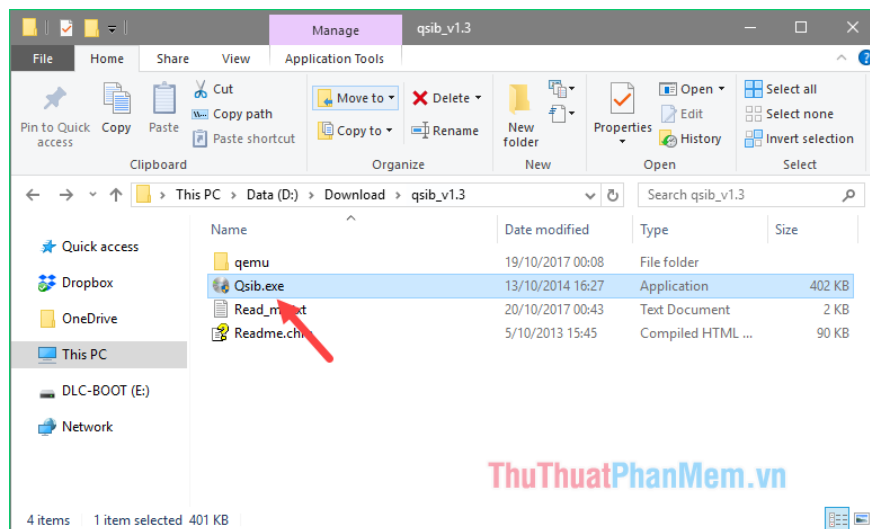

## 1. Check the USB boot with QEMU Simple Boot

**QEMU Simple Boot** is a very effective USB boot testing tool but also very compact and easy to use.

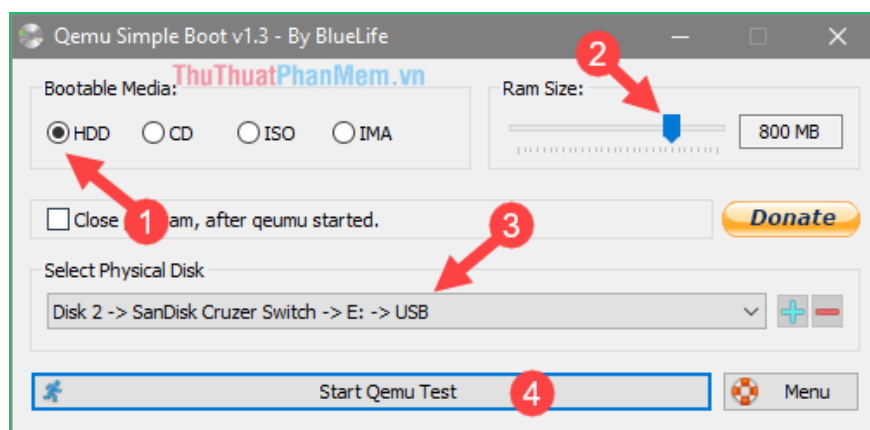

You can download the application here: <https://www.sordum.org/7763/qemu-simple-boot-v1-3/>

After downloading, extract and then double-click the **Qsib.exe** file to run the application.

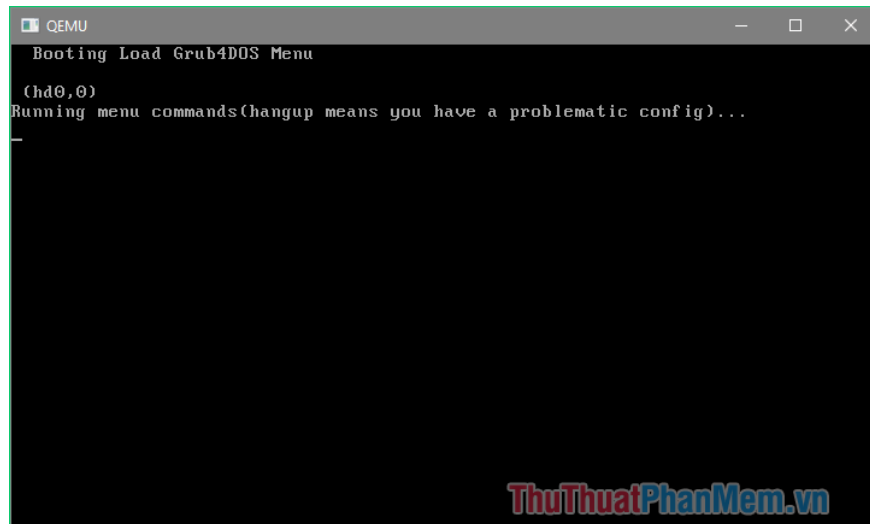

At the interface of the application you choose as shown below:

- 1- Select the HDD
- 2- Choose the amount of ram you want
- 3- Select the bootable USB drive connected to the computer
- 4 -Click **Start qemu Test** to begin the test run USB boot

After clicking **Start Qemu Test** a new window will appear booting into our USB:

If the USB boot successfully runs, the results will appear, as shown in the image below is the DLC Boot interface, if you create a USB to install Windows, the Windows installation interface will appear.

In case, if the USB boot fails, an error will appear.

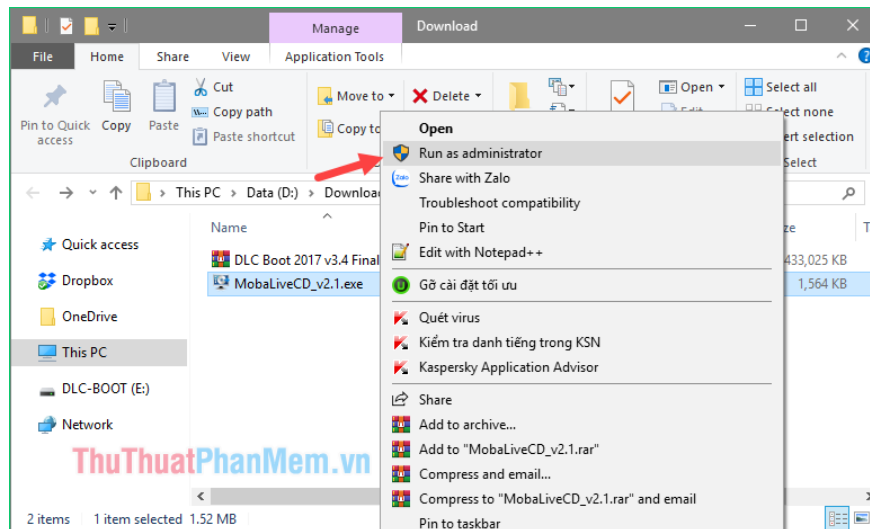

## 2. Test the USB boot with MobaLiveCD software

**MobaLiveCD** is also a very good and lightweight USB boot test software, in addition it also has a pretty nice interface.

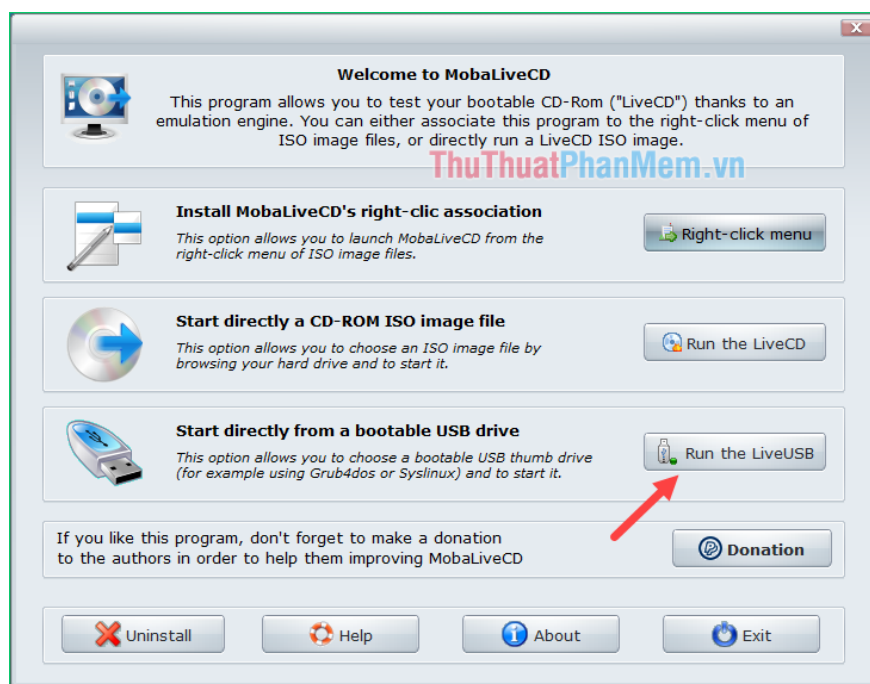

You can download MobaLiveCD here: [https://www.mobatek.net/labs\\_mobalivecd.html](https://www.mobatek.net/labs_mobalivecd.html)

After downloading you remember to run the application under Administrator by:

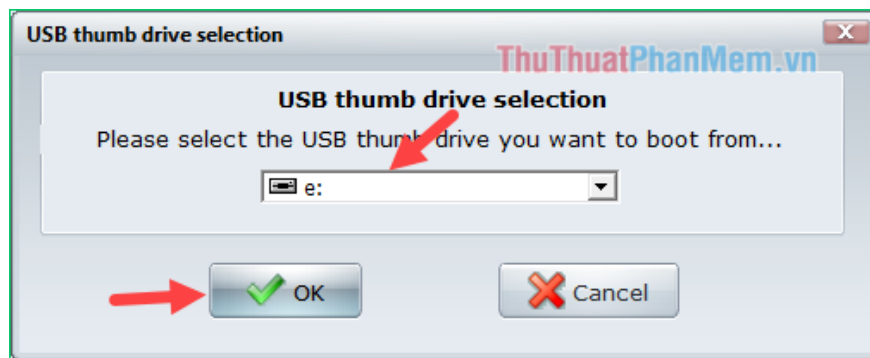

Right-click on the MobaLiveCD\_v2.1.exe file and select **Run as administrator**

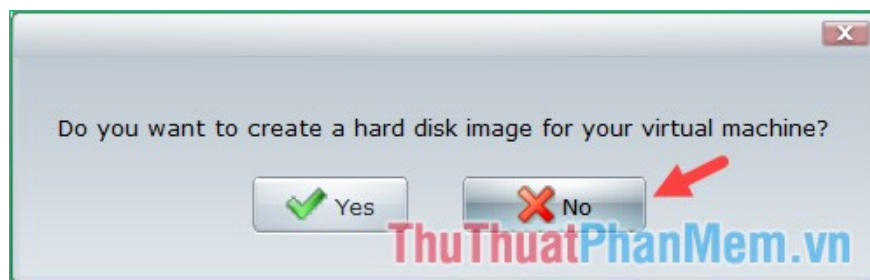

Now at the interface of the application you select **Run the LiveUSB**.

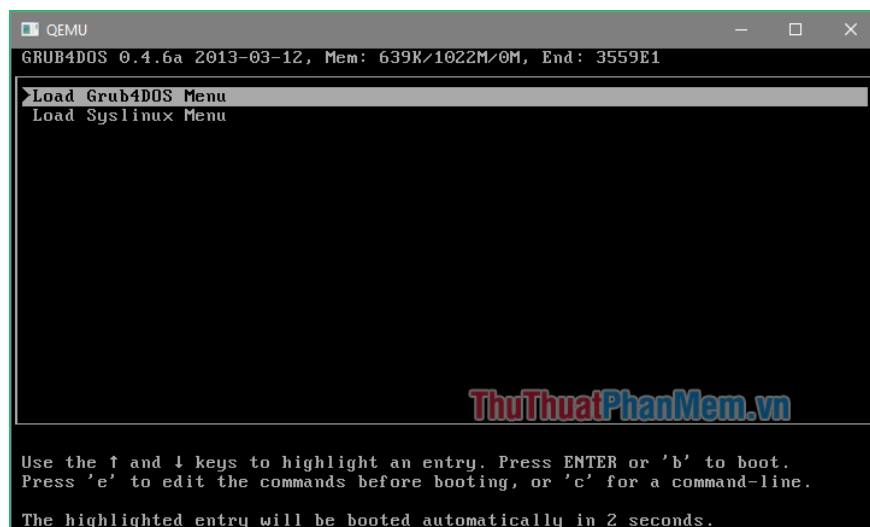

A new window will appear, select the USB boot drive connected to the computer and click OK.

If a message appears, click No

At this time, the Boot window appears:

If the USB boot successfully runs, it will produce similar result as below:

Above TipsMake.com introduced to you some ways to check whether the USB boot has been successfully created or not, hope the article will help you. Good luck!
