

How to transfer application data to memory card quickly and accurately

Let's learn how to transfer data to memory card, transfer applications to memory card quickly and effectively through the following article.

Owning a mobile device, phone, laptop but with limited memory, not enough to store more data. Users can use other storage devices such as memory cards to serve work and study more conveniently. Let's learn how to transfer data to memory card, **transfer applications to memory card** quickly and effectively through the following article.

What is a memory card?

Memory cards are external storage accessories for electronic devices, storing different types of files such as: images, sounds, or other files,.

Currently on the market, memory cards are classified as: SD cards, Mini SD cards and Micro SD cards.

Benefits of moving apps to memory card

Moving **applications to the memory card** brings many benefits to users, typically including:

1. Helps experience multiple applications on the same device.

2. Reduce the burden on the device when having to store too much and handle different tasks at the same time, which can cause lag.
3. Reduces risk to the device when installing applications, avoiding having to reset the device.

Notes when transferring applications to memory card

Using memory cards to store data is often used for phones, usually older phone models when the device's memory capacity is limited and not expandable.

New Android 6.0 phones can move apps to the SD card and accept the SD card as internal memory. Older versions had to do this manually. Newer OS has almost upgraded the memory so it is no longer possible to move data to the SD card.

Some default system applications cannot be moved to the memory card such as: messages, contacts, settings, camera, recorder,.

Applications stored on the memory card will run depending on the processing speed of the memory card. Therefore, when **transferring applications to the memory card**, users need to consider and choose the appropriate memory card type with faster processing speed.

Note that when storing applications on a memory card, if the card is damaged or broken, applications and data will be lost.

If you remove the memory card from your phone, the application will change its function and not work.

How to move apps to memory card

1. Step 1: Go to Settings -> select Applications -> Select the application you want to transfer
2. Step 2: Select Archive -> select Change
3. Step 3: Select SD Card -> Select Move

After performing the steps, the application will be moved to the memory card. Wait until the conversion process is complete, the application can be used normally and the storage location will be moved to the SD card.

How to transfer data to memory card

Besides **transferring applications to the memory card**, there are still some cases where errors may occur. To make the device memory lighter, users can **transfer data to the memory card** .

Method 1: How to transfer data to memory card using File Manager

1. Step 1: Click Tools -> Go to your File
2. Step 2: select Download -> Press and hold to select File, select All if you want to transfer all data
3. Step 3: Select the 3 dots in the upper right corner -> Click Move
4. Step 4: Click to select SD Card -> Click the available Android folder to transfer data to -> Press H to complete the move process

Method 2: How to transfer data to memory card using Link2SD

1. Step 1: Download the Link2SD application to your device
2. Step 2: Open Link2SD application -> Select the 3 dots in the upper right corner
3. Step 3: Click Select multiple -> Click the select all symbol in the upper right corner to select all files -> Select the 3 dots in the upper right corner.
4. Step 4: Click Move to memory card -> Click OK to complete the move process.

Above are the ways to **transfer applications to memory cards** and how to transfer data to memory cards that users need to grasp to make their devices lighter and limit lag. Hopefully, the article has provided customers with the best information to use the device best.

Own a mobile device, phone, computer, **laptop** , PC with strong configuration, large memory suitable for your needs, preferences as well as reasonable price. Come to TipsMake to receive advice and promotions on the best electronic devices, storage devices, and SD cards.
