On iOS 8:

1. Connect old iPhone to WiFi network, plug in charger if battery is low
2. Open **Settings** on the old iPhone.
3. Click **iCloud** .
4. Click **Backup**

5. Click **Back Up Now** and wait for this process to complete.
6. Remove the SIM from the phone (if you plan to use this SIM on a new device)

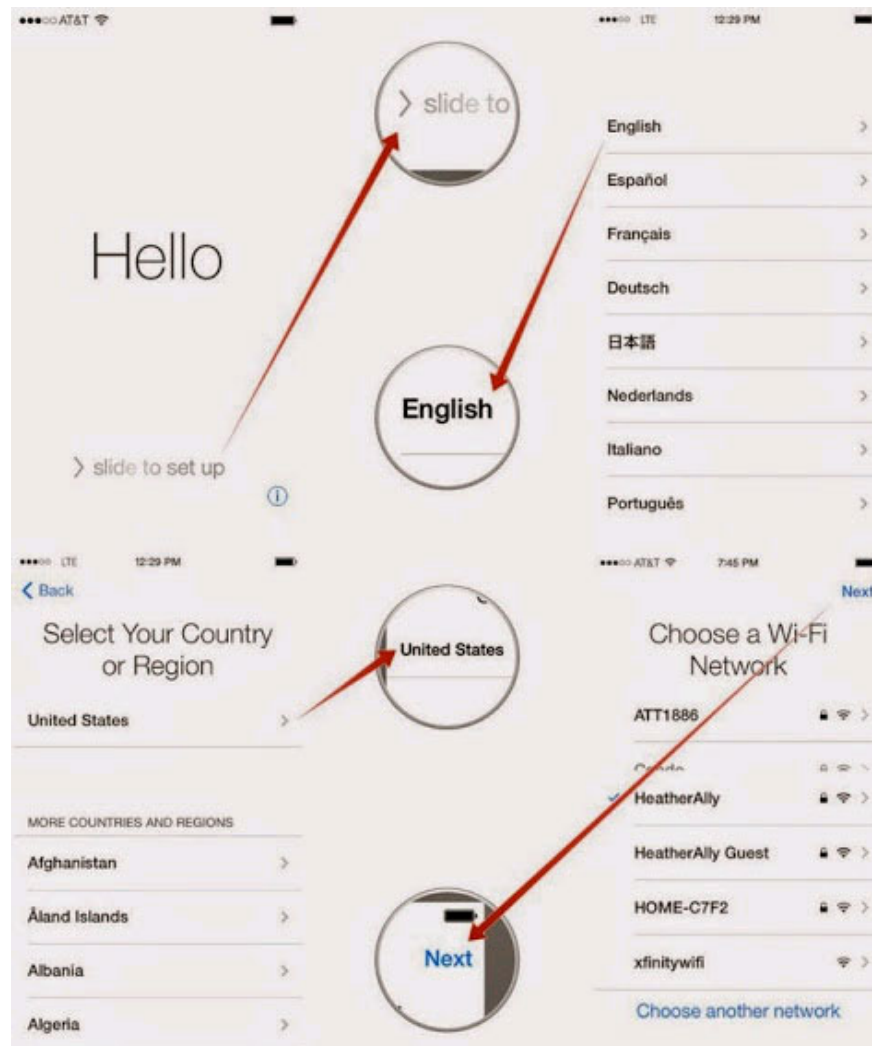

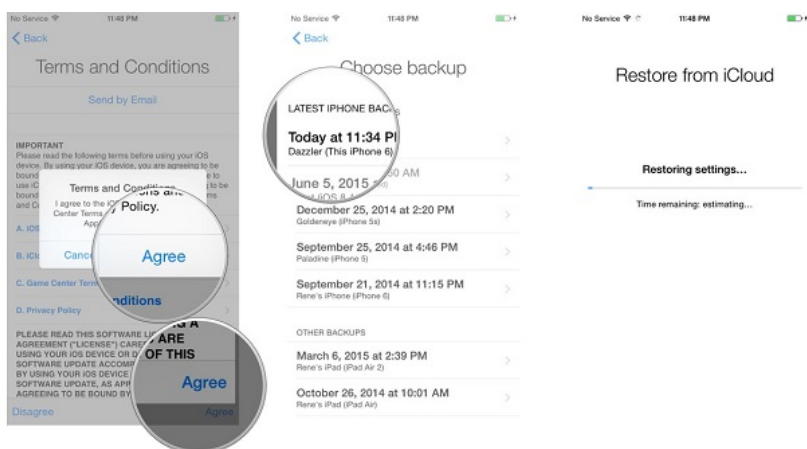

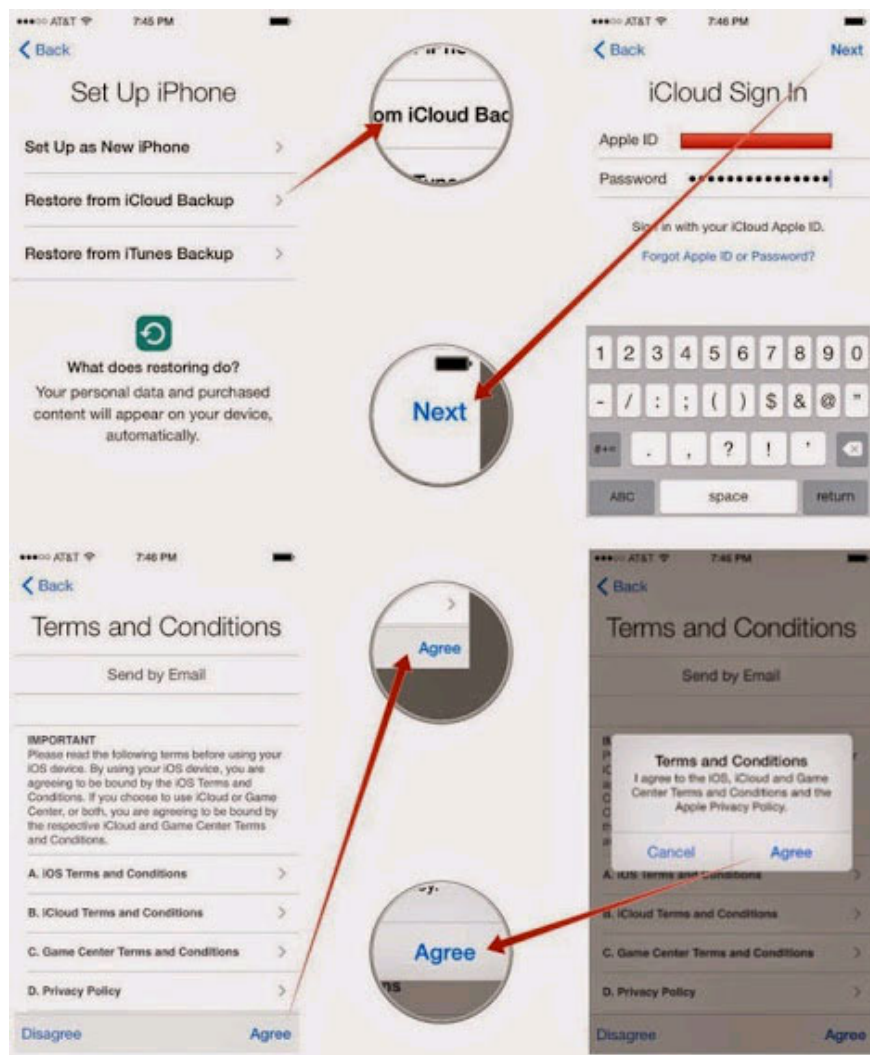

Transfer data from old iPhone to new iPhone with iCloud

If you have backed up data from your old iPhone to iCloud, it's easy to bring it all down to the new iPhone.

1. Insert the SIM into the new iPhone
2. Open up the new iPhone, you will see a welcome screen and a **slide to set up message** (*slide to install*).
3. Select **the language** from the available language table.
4. Select the **country** or region you are in.
5. Select **wifi network** and enter password if available. Without wifi, you can choose **Use Cellular**, but be aware that only some things on iCloud can be restored without using wifi. The remaining data is required to use WiFi to be able to retrieve it. Or you can choose to restore from an iTunes backup if available.
6. Continue to select **Restore from iCloud backup**.
7. Log in to your iCloud (Apple ID) account and click **next** .
8. Click agree to the **Terms and Conditions** , confirm this agreement in the pop up window.

9. Select the backup you just made in the previous step.
10. Enter **iCloud password** , then click **Next**.
11. Wait for the device to recover from iCloud - this process may take a long time or longer depending on the level of data you bring down, so you should plug it in if the battery capacity is low.

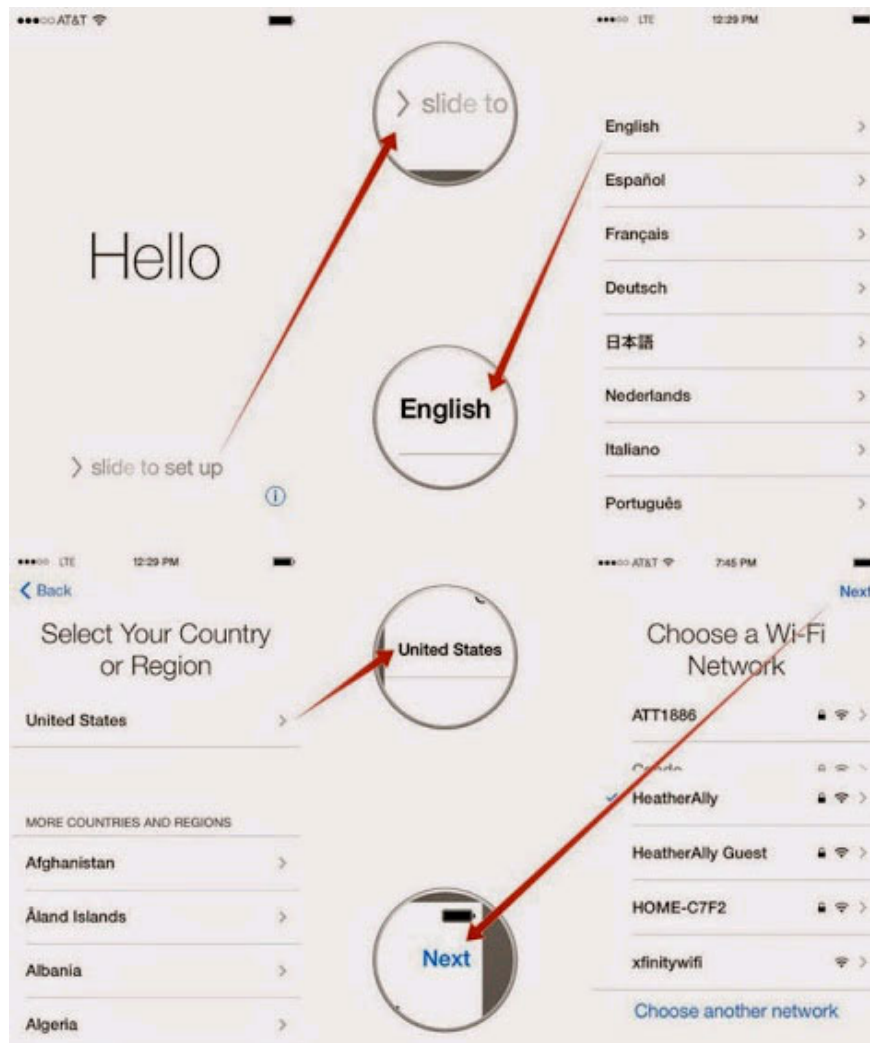

Again note: apps, images, videos will only be restored when using WiFi. If you have to go out of WiFi coverage before you finish, don't worry, the job will start again as soon as the WiFi wave is available again from the moment you leave.

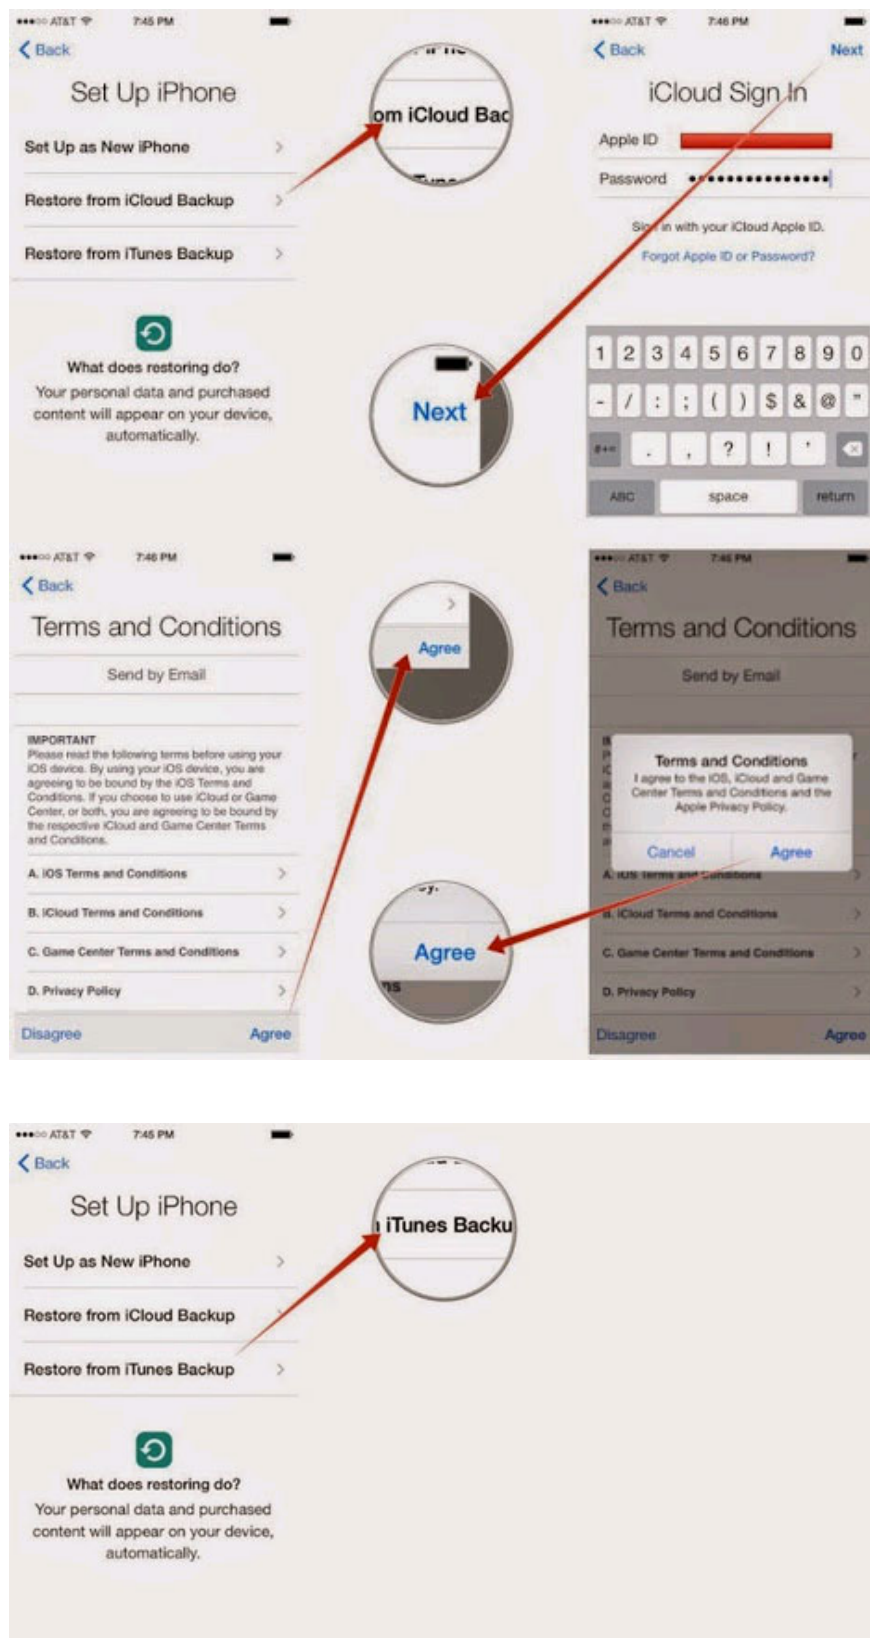

Transfer data from old iPhone to new iPhone using iTunes

Some other users think that using iTunes is safer when you want to backup and restore, this is not wrong. At the same time it is the only option for those who use old equipment. Anyway, recovering from iTunes is easy!

Note that you must be sure to use the latest version of iTunes before continuing with the steps below.

1. Open up the new iPhone and follow the sliding instructions to install (*slide to set up*).
2. Choose **language**.
3. Choose the **country** or region in which you live.
4. Select wifi network and enter password if available. Without wifi, you can choose **Use Cellular** , but be aware that only some things on iCloud can be restored without using wifi. The remaining data is required to use WiFi to be able to retrieve it. Or you can choose to restore from an iTunes backup if available.
5. Select Next **Restore from iTunes backup** .
6. If you have not connected your device to a computer that is hosting an iTunes backup, you will receive a notification asking for a connection.
7. Follow the instructions and select the latest backup.

That's it, make a cup of coffee or orange and wait for a complete recovery notification from iTunes. Wish you enjoy new technology achievements on iPhone 6/6 Plus!
