

How to translate text on photos for iPhone with Translate Photo

Translate Photo is a professional translation application, supporting up to 90 different languages. Besides, the application can translate text directly through images.

Today to meet the needs of learning foreign languages, there are many applications supporting language translation, especially translating languages ??in text through images. We just need to install the application, then use the camera to take a picture of the document you want to translate is done.

1. How to translate images, translate words on photos for Android

Translate Photo is an application with such features. But this application also has many special features that many other translation applications do not have, such as the ability to translate 90 languages, directly translate documents from images, convert images into text for arbitrary editing, paragraphs Language translation text can be read aloud. Previously, **Translate Photo cost about \$ 3.99 but now Apple has allowed users to download the application for free** . Join the Network Administrator to learn how to translate Translated documents on iPhone / iPad in the article below.

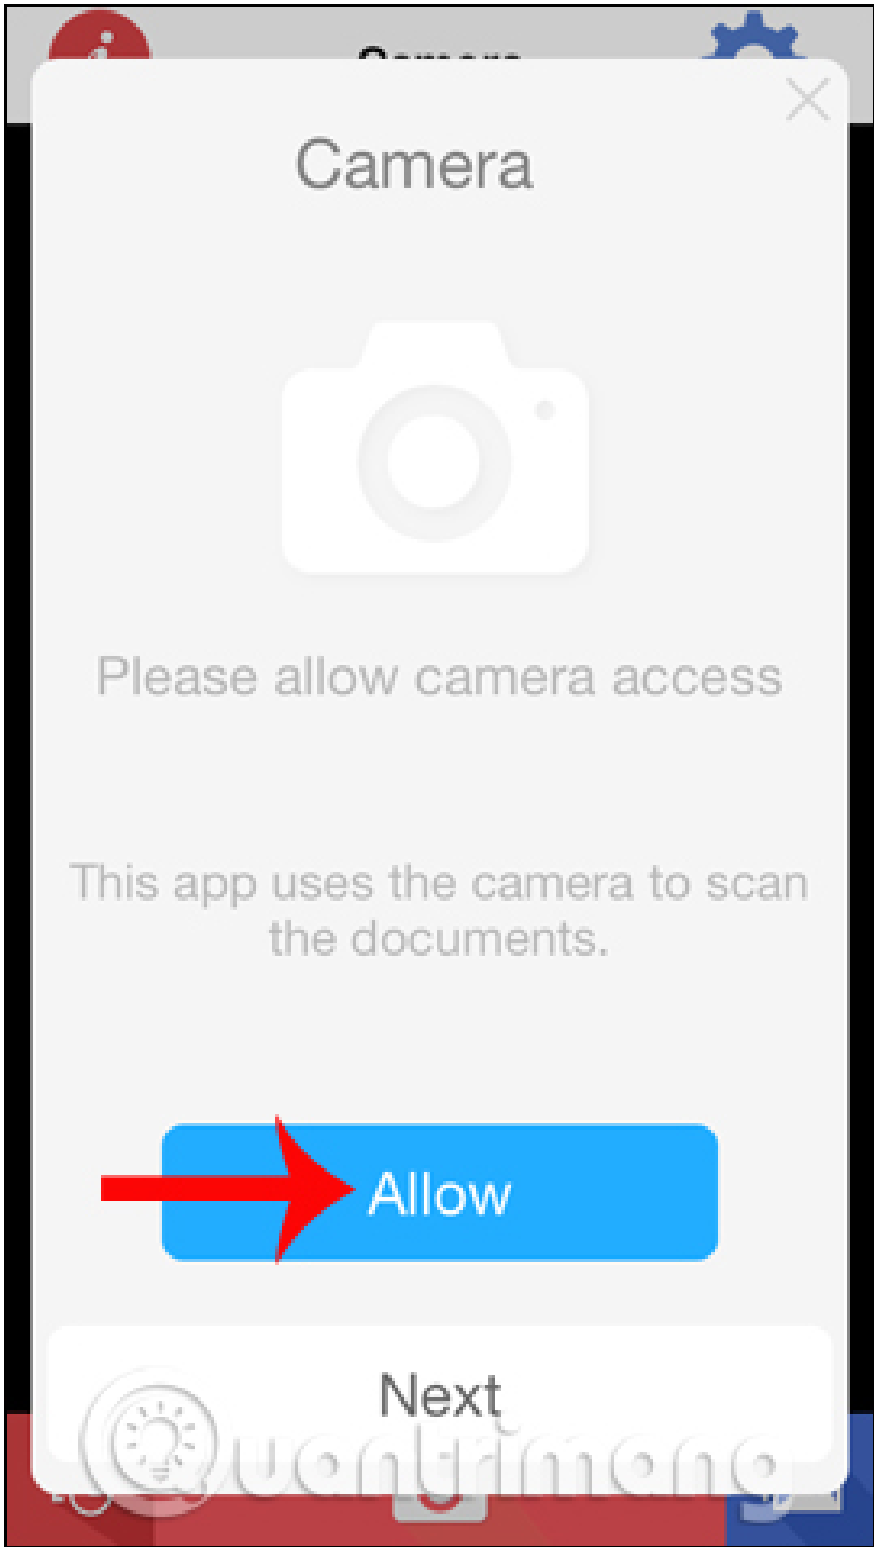

Step 1:

First of all, click on the link below to download the Translate Photo app to the device.

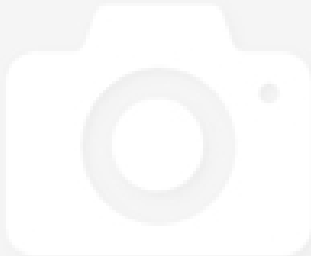

1. Download the app Translate Photo iOS

Step 2:

After that, the user will proceed to start the application. In the first interface, the application will require users to allow **access to the Camera application** , click **Allow** . After that, we click on **OK** to be able to use the Translate Photo application.

Camera

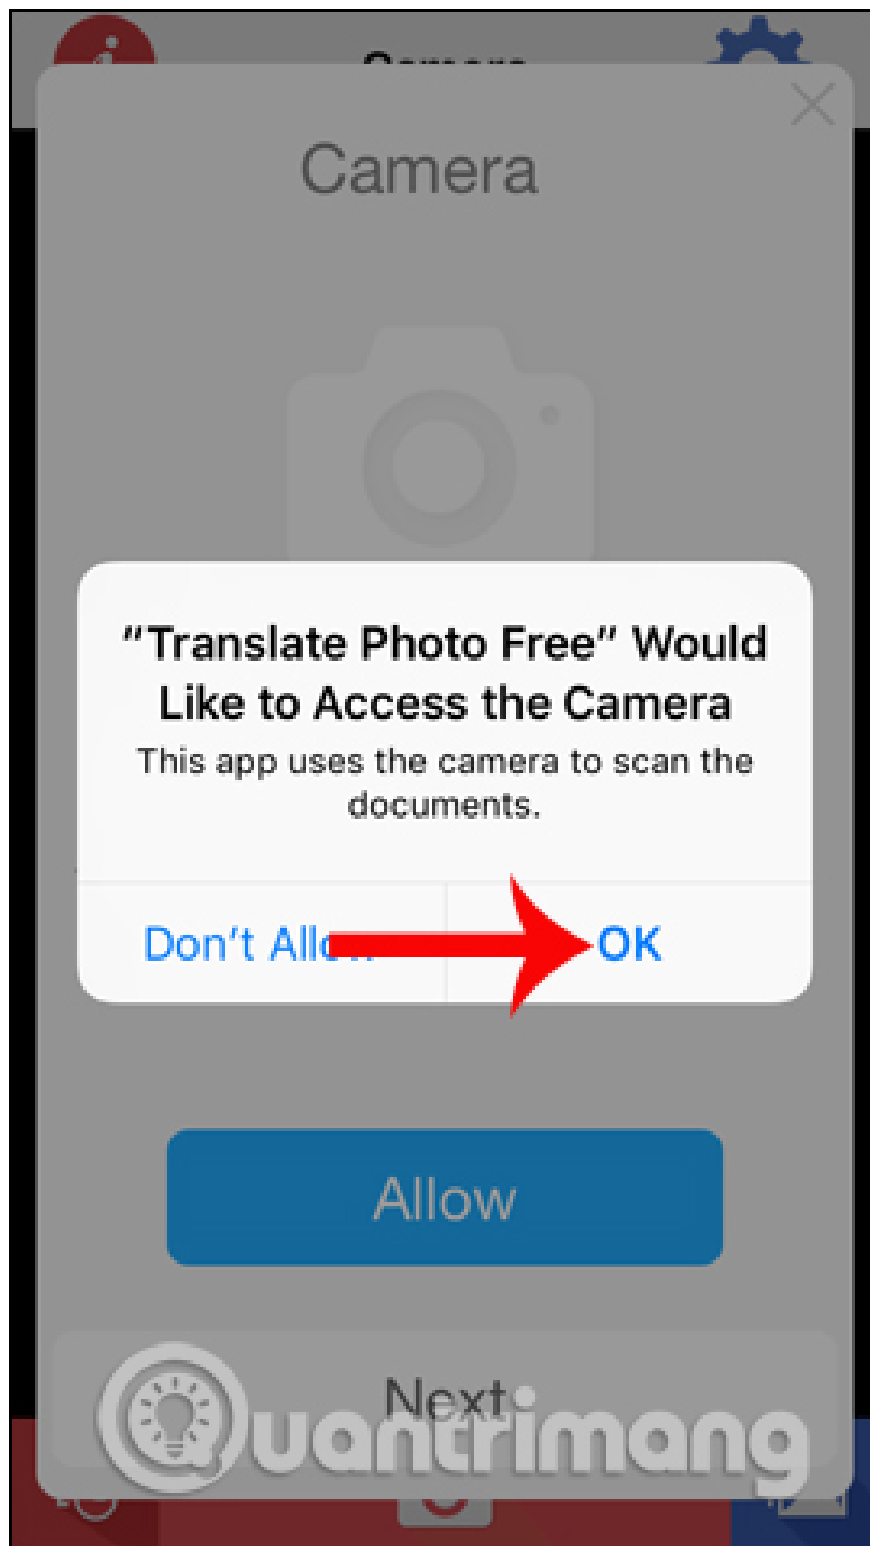

Please allow camera access

This app uses the camera to scan the documents.

 Allow

Step 3:

The camera interface appears. Click on **the camera icon** at the bottom of the interface to capture the content to translate. Next, the image editing interface appears. You can cut or rotate the image as you like, even adjust the color or light for the image.

This customization will make it possible for the application to clearly identify the text that needs to be translated, to convert images into text quality and more efficiently.

When customizing the image, press the **tick** to save the new image. Next click **the Next item** at the top right of the interface.

Cài đặt

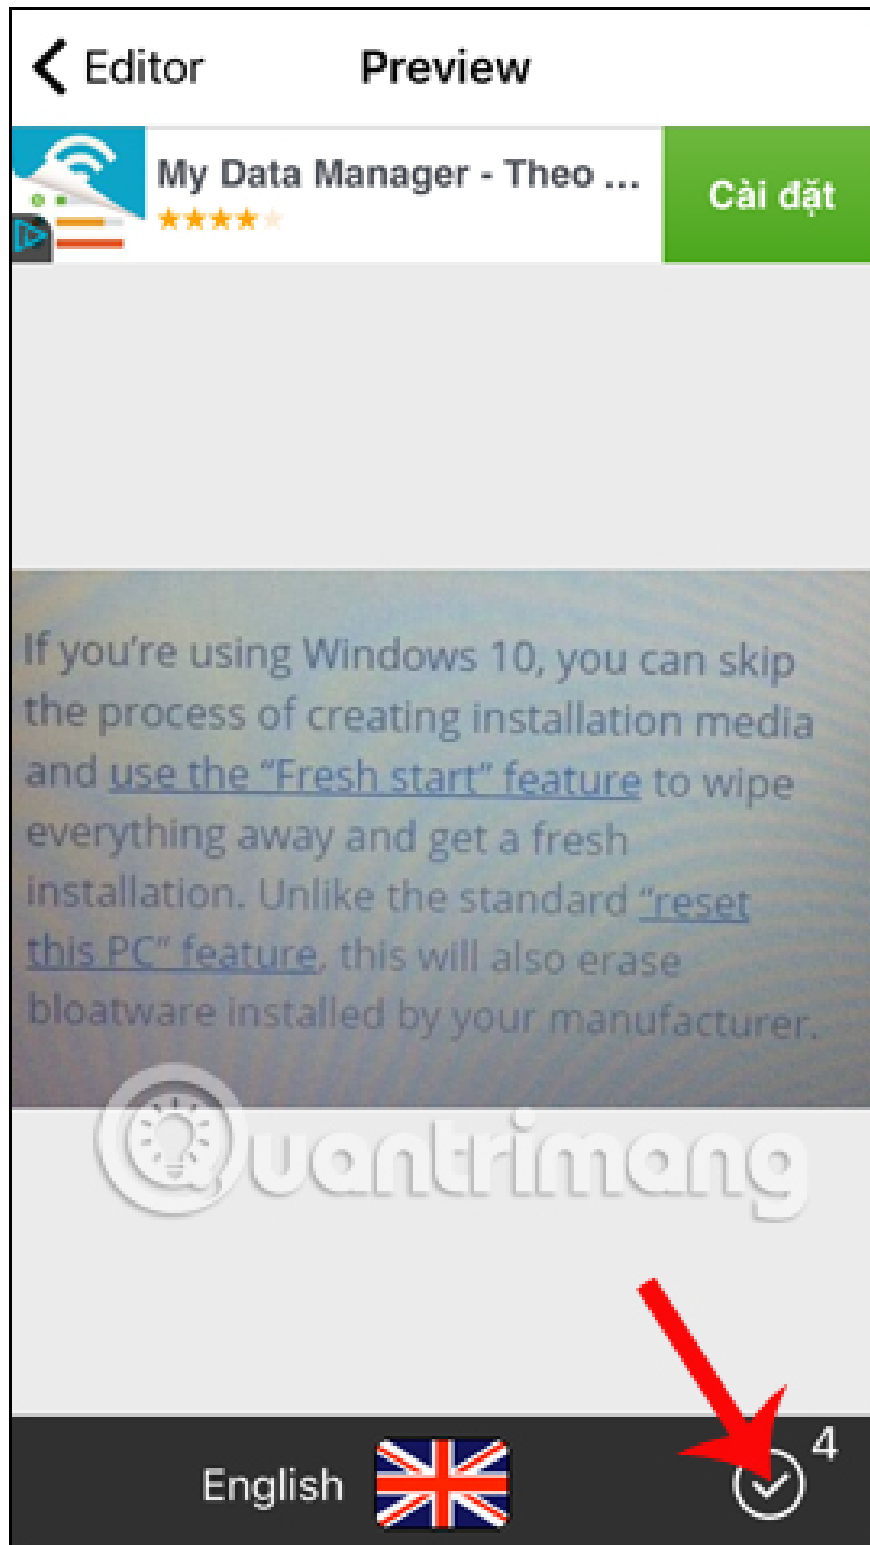

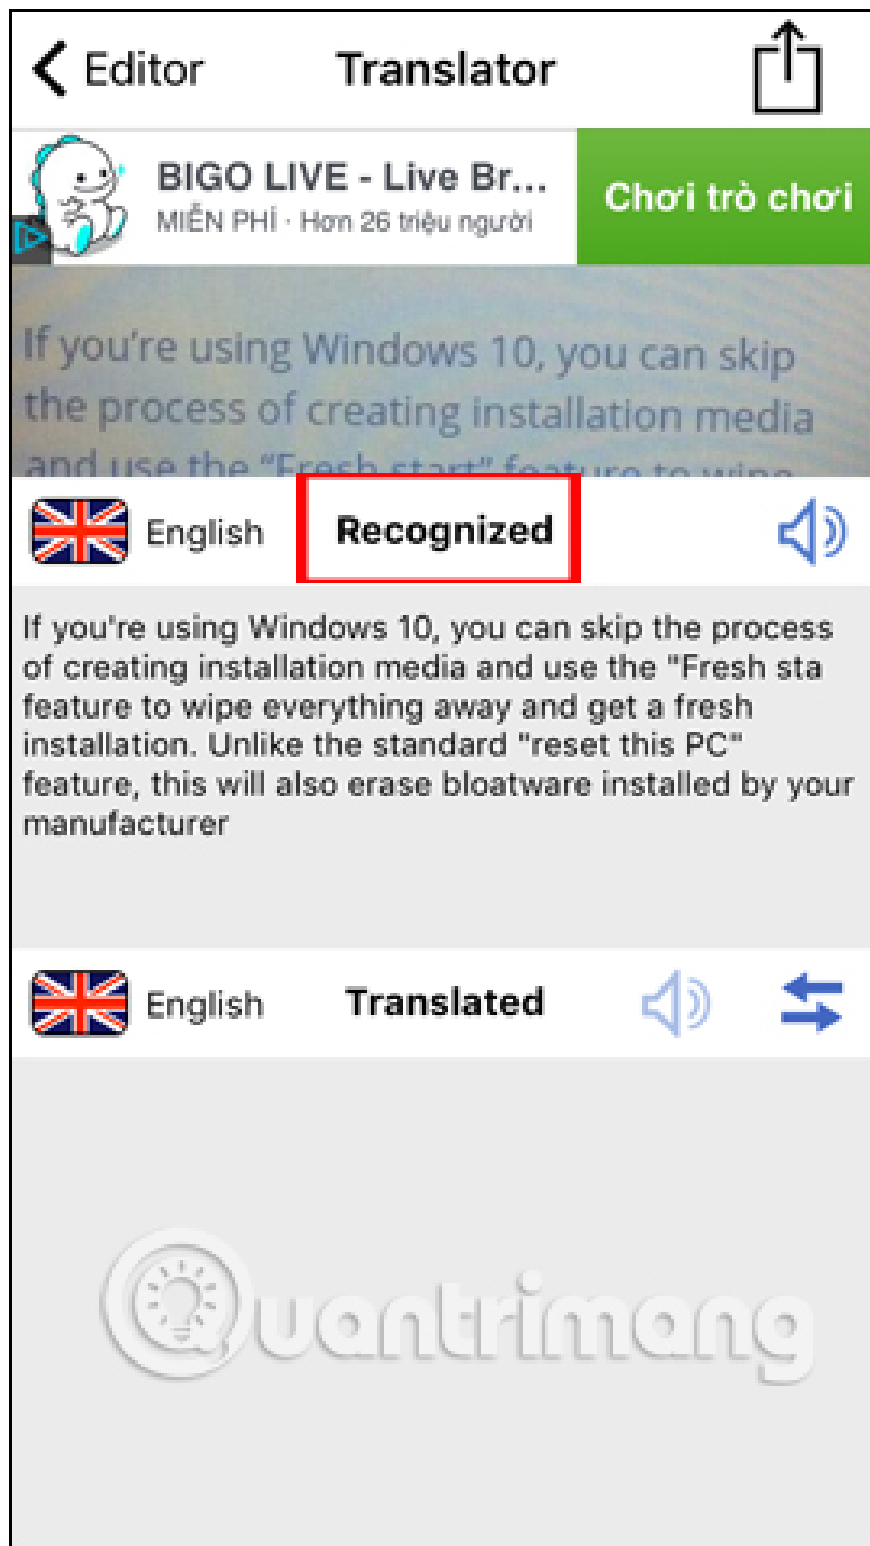

Step 4:

Switch to the new interface. Below the interface will be the place for us **to select the original language** in the text to be translated. Here will be English (English). Press the **tick** to move to the next interface.

The result is that the user has the content of the text to translate from the previous snapshot, in **the Recognized section** . Translate Photo's scanning and image recognition and language analysis works very effectively.

Step 5:

If you want to **read this document** , click on **the speaker icon** . Soon the application will read the text aloud. The reading speed on Translate Photo is relatively slow, making it easy for users to follow, especially long documents.

To select the target language to translate, in **the Translated section** click on English to select the language.

Step 6:

In the list that the application provides, you **select the language to translate** . Here I choose Vietnamese (Vietnamese). Next click on **the 2-arrow icon** so that Translate Photo will translate the text. Finally we will get the document section that needs to be translated with the selected language.

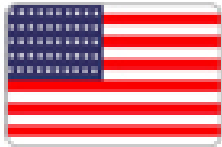

< Translator Target language

Step 7:

Next, if the user wants to save the document translation again, click **the save icon** in the top right corner of the interface. Click on **Open In** to add options for the translation. There will be an option to save previously captured document images on the application to the collection.

Check on **Original Image** then click **Done** to save.

Step 8:

Then click on **the Save Image item** to save the image to the gallery. Translate Photo will ask the user to allow access to the collection, click **OK** to complete.

So the original text shot on Translate Photo has been saved.

Step 9:

To **copy the language translation text** and paste it in any text importer, click on **Translations from English** , then click **Done** above. Next, click **Copy** to copy this paragraph.

Now we can paste them in any text content importer, such as pasting into the Notes application as shown below.

A very useful translation application, isn't it ?! With Translate Photo, we can translate language directly from the image, convert the content in the image into text and proceed with the translation. After that, users will have the option to save the document image, or paste the translated text anywhere on the device. If you need a translation application for reference, quickly download Translate Photo for free.

I wish you all success!
