

# How to trim a screen displaying videos on Camtasia

When recording video, there will be extra details, no need to display. If so, you can trim the screen displayed in the video on Camtasia.

If you often have to edit videos or often record video screens, then Camtasia Studio will be known. Camtasia is a tool that owns many extremely useful features, from video recording to editing video.

With Camtasia we can combine 2 videos into 1, insert 360-degree rotation logo into the video, change the sound of the video, . In this article you will learn how to trim the screen displayed in the video. For example, your video has redundant parts, no need to go, and you just need to take a part in the video frame only. Camtasia will cut the screen part that the user chooses not to display in the video.

## How to remove video frames on Camtasia

### 1. Select 1 detail displayed in the video

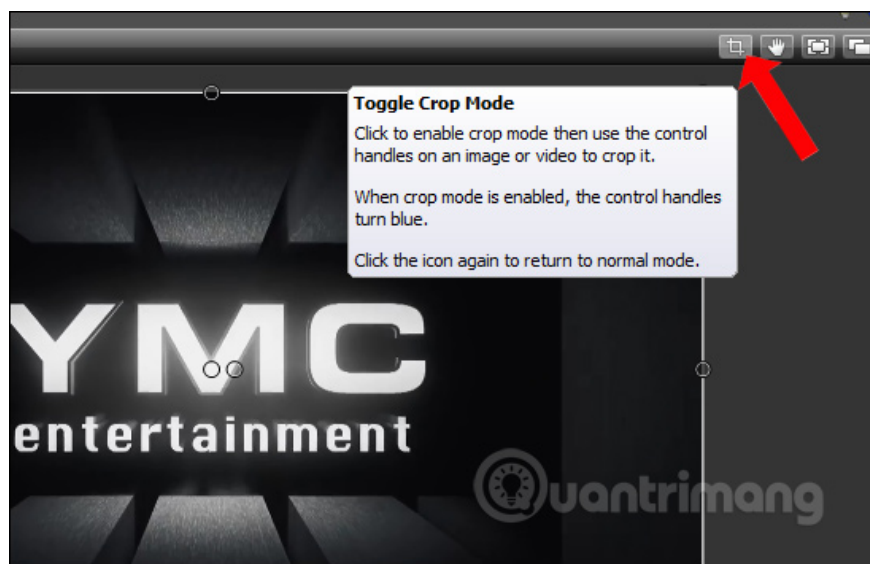

In case you shoot video tutorials and subjects in a fixed position, do not move away from the frame, you can cut the entire video in 1 certain frame.

#### Step 1:

First, you also need to click **Import media** to import the video you want to edit into Camtasia Studio's interface. Then drag the video to the Timeline bar and on Track 1.

Then the video frame above will display small dots. Click the **Toggle Crop Mode** tool .

Then the dot will appear as a **green square** as shown below.

## Step 2:

Click and hold the left mouse button on one of the green square dots and **drag to remove the extra frame** . As shown in the figure, remove the two black bands on the left and right sides of the frame.

Frame results will be collapsed as below.

Depending on where the subject in the video is and the user wants to cut off the frame, we move the green dots to the desired position. So the entire video will be cut into a compact frame.

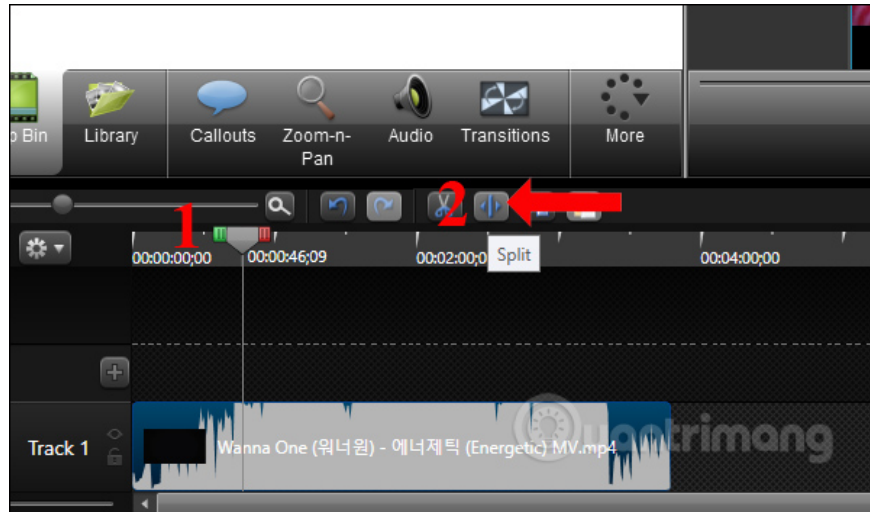

## 2. Select a detail displayed in a video

In case the video has many different scenes but the subject moves, then we can choose a segment to cut the frame in the entire video.

### Step 1:

Also at Track 1 of the Timeline, we will **cut the video into different sections**, depending on the content and the need to cut the screen. If the subject stands up and moves, select that time to cut the video.

Drag the time bar to the point you want to cut and then click **the Split tool icon**.

### Step 2:

Now the video will be divided into 2 different parts.

Continue to bring the time bar to 2 different videos to proceed to cut the screen according to the position of the subject as above. Also click the Toggle Crop Mode icon to switch to the blue square, then drag to remove the extra frame for each video.

The way we do it is as in part 1.

The operation to crop frames in videos on Camtasia is very simple and easy, there is no need to perform too many operations. Depending on the content in the video, especially the host to stand still during the video or move scene, change that the user can choose one of the two ways to do it.
