How to turn the firewall on and off in Windows 10. FireWall System - Firewall helps you to protect from many threats on the Internet or devices that want to connect to your computer. However, sometimes it also becomes an obstacle that makes us uncomfortable when

FireWall System - Firewall helps you protect from many threats on the Internet or devices that want to connect to your computer. But sometimes it also becomes an obstacle that makes us uncomfortable when surfing the web or playing games. Today, TipsMake.com will help you to do that easily and quickly.

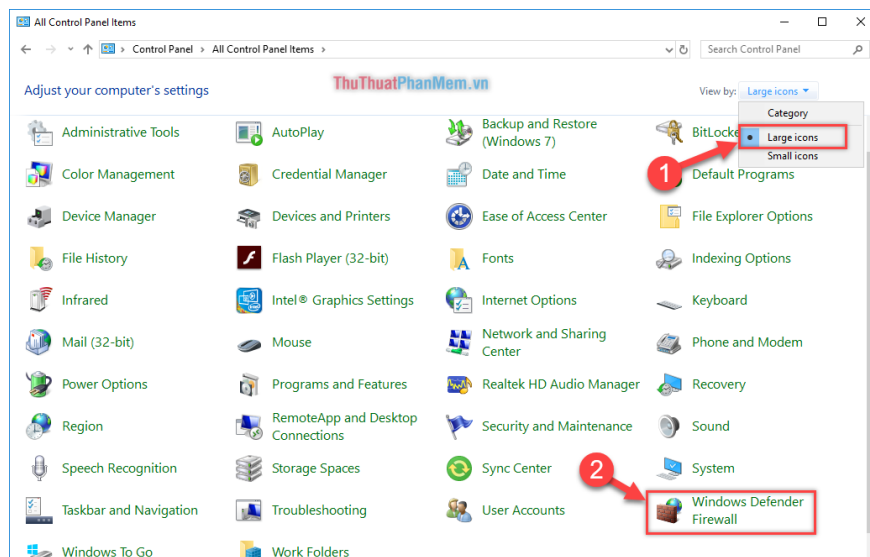

Step 1 :

- (1) Click on the Start Menu or press the window button (Windows)
- (2) You type ' **Control Panel** ' in the search bar.
- (3) When the utility will display, click to open the utility.

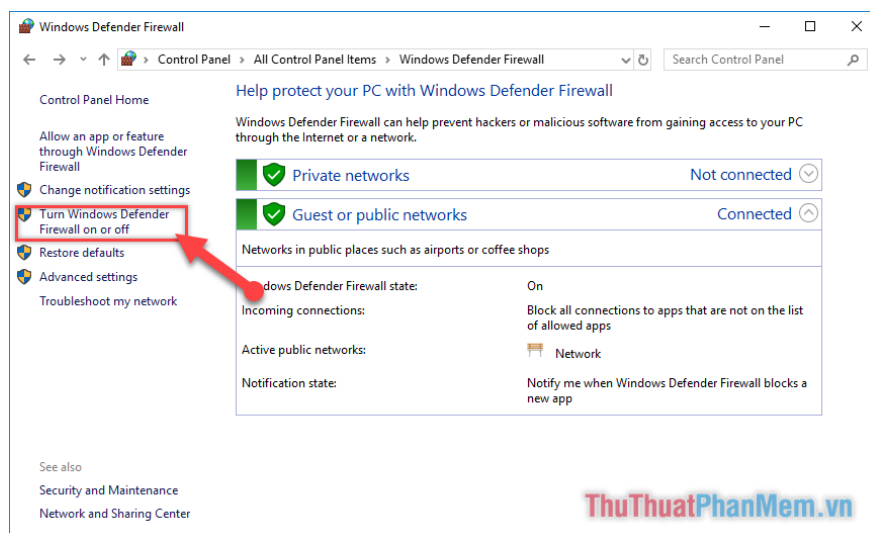

Step 2 :

The ' **Control Panel** ' window appears, Many computers will display the icon in the ' **Category** ' mode. You need to switch to the ' **Large Icons** ' display mode (1) ? Then select the software ' **Windows Defender Firewall** ' (2)

Step 3:

You continue to select ' **Turn Windows Defender Firewall on or off** '

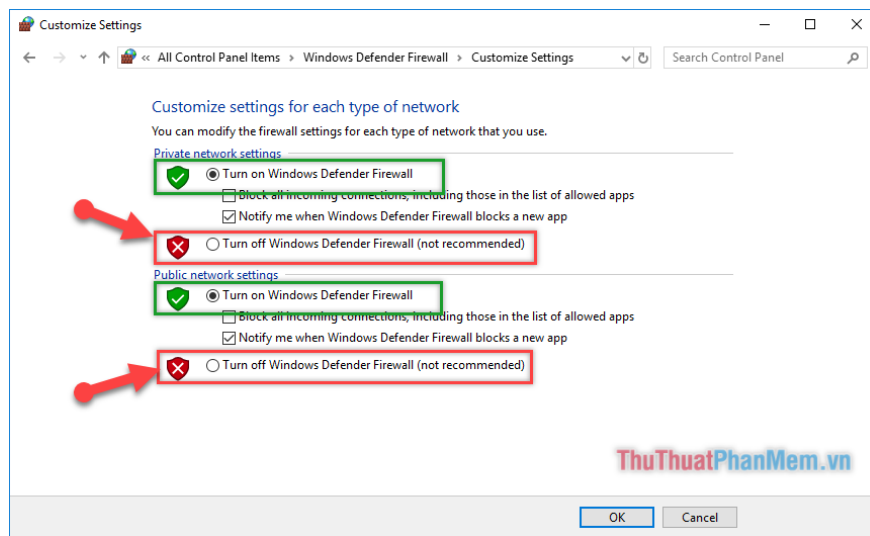

Step 4:

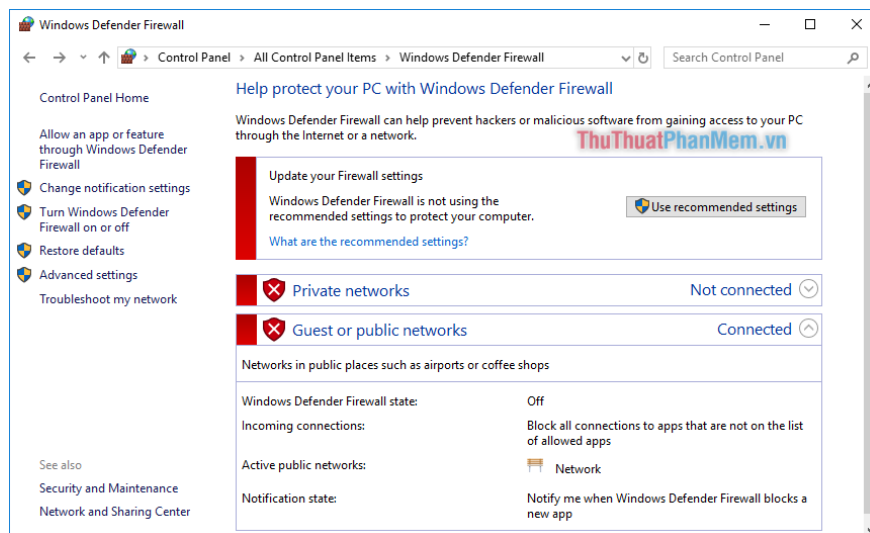

In the next displayed window, usually the device has FireWall - Firewall enabled, click on the 2 red boxes to turn off the firewall.

Similarly, if the firewall is turned off, click on the 2 green boxes to turn on the firewall.

Then click OK to save

After the firewall has been turned off, the interface of the Window Firewall will appear as follows:

So, having finished turning on / off the firewall on Windows10, it's easy, isn't it? However, only turn off the Firewall - FireWall when needed, because it helps protect your computer from Internet threats. Thank you for watching, TipsMake.com wish you success!
