

How to turn off mouse acceleration on Windows 11

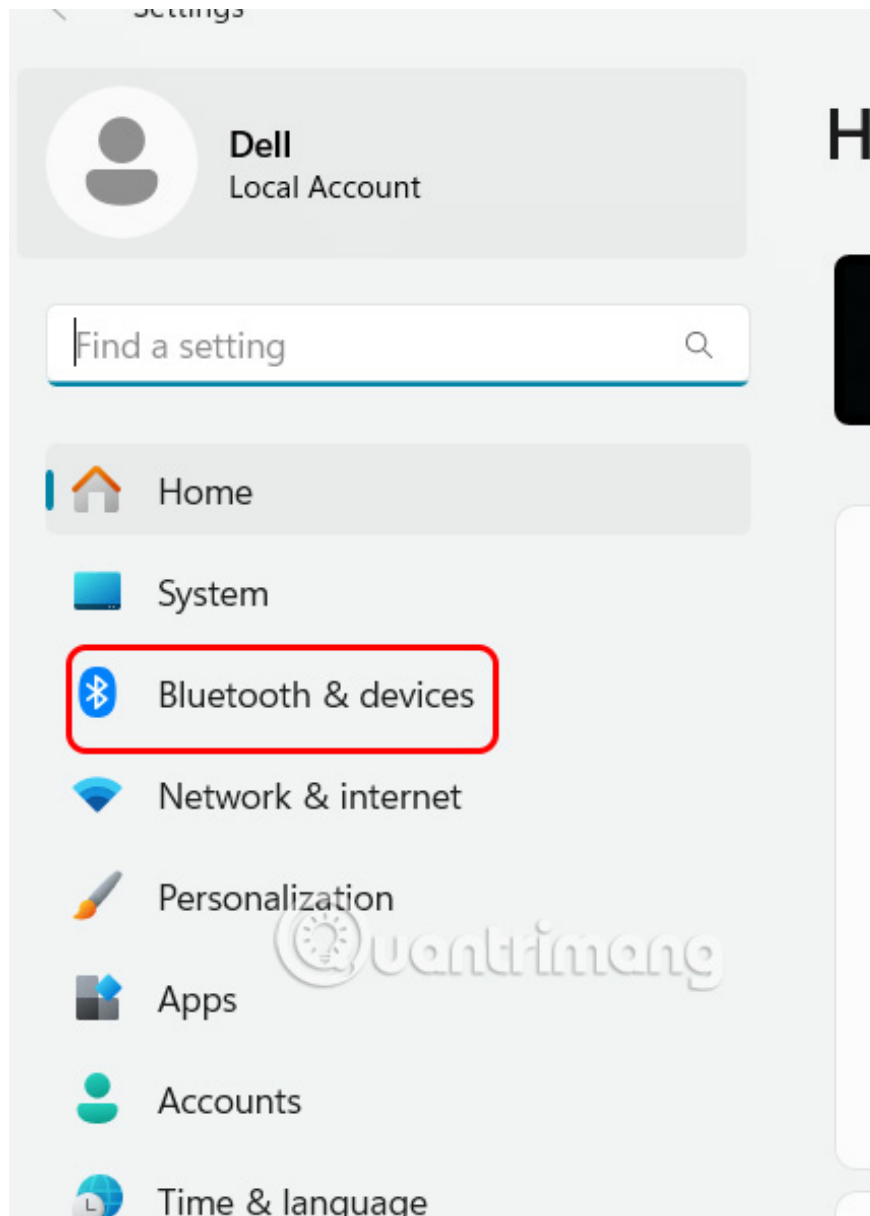

If you only use your mouse for common tasks, it is not necessary to enable mouse acceleration. Here are instructions for turning off mouse acceleration in Windows 11.

Windows 11 has Enhance Pointer Precision, a mouse acceleration feature that turns on the mouse DPI setting when you use this feature. It controls how far the pointer moves on the screen in response to the speed at which we move the mouse. If you only use the mouse for everyday tasks, there is no need to turn on this feature. Here are instructions on how to turn off mouse acceleration on Windows 11.

Instructions to turn off mouse acceleration on Windows 11

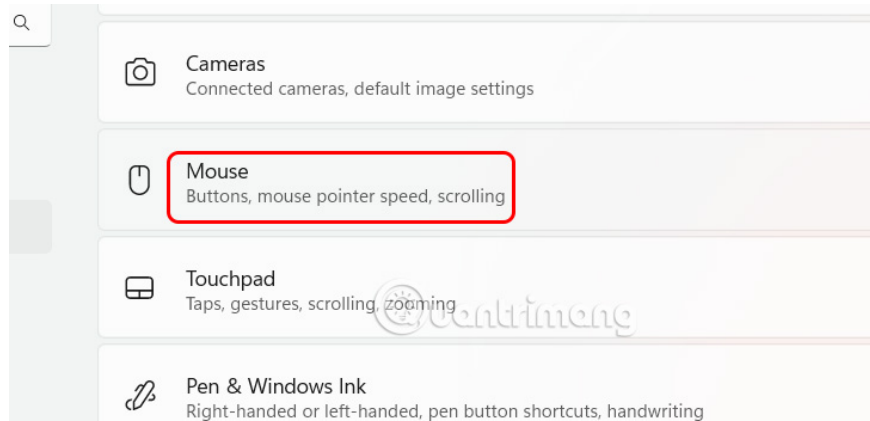

Step 1:

Press Windows + I to **open Settings** , then click **Bluetooth & Devices** in the displayed list.

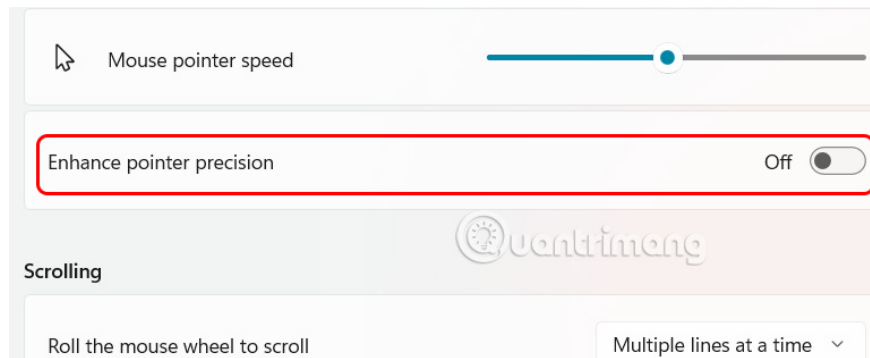

Step 2:

You look at the content next to it, we **click on Mouse** to adjust the mouse on the computer.

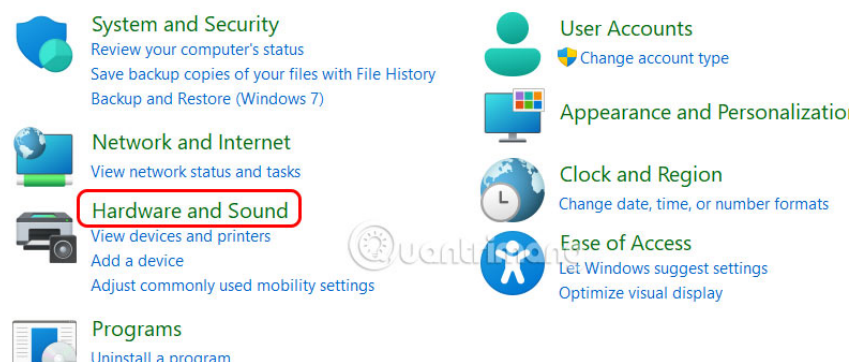

Step 3:

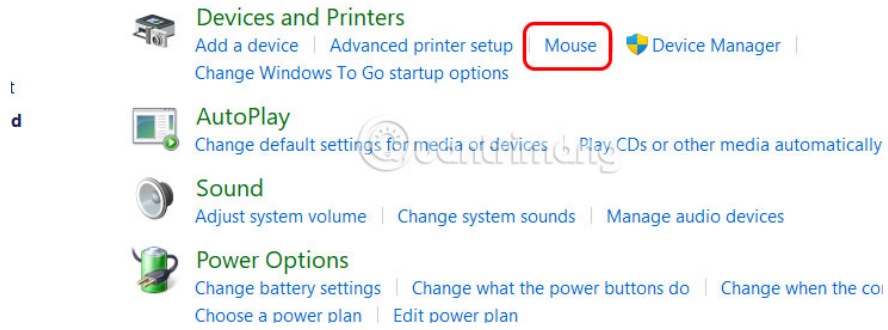

In this adjustment interface you will see **the Enable Pointer Precision** setting to enable mouse precision when using, **turn off Enable Pointer Precision to turn off mouse acceleration on the computer.**

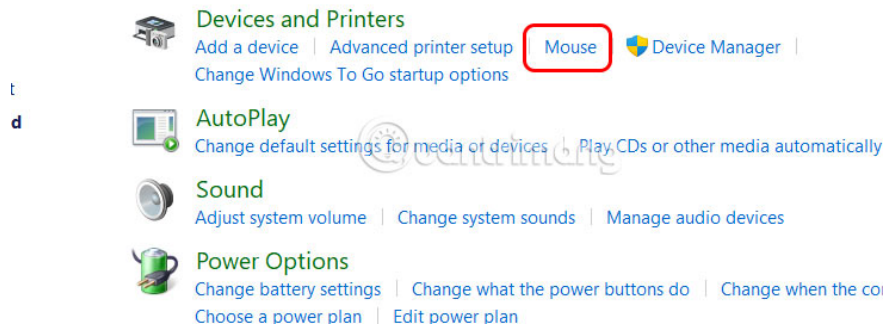

Alternatively, you can also go to Control Panel and then click on Hardware and Sound in the list on the left of the interface.

Then click on **Mouse** to adjust as shown below.

Click on **the Pointer Options tab** and uncheck Enhance Pointer Precision. Finally, click Apply to save the new changes to your computer.
