

# How to turn off group notifications by app on iPhone or iPad

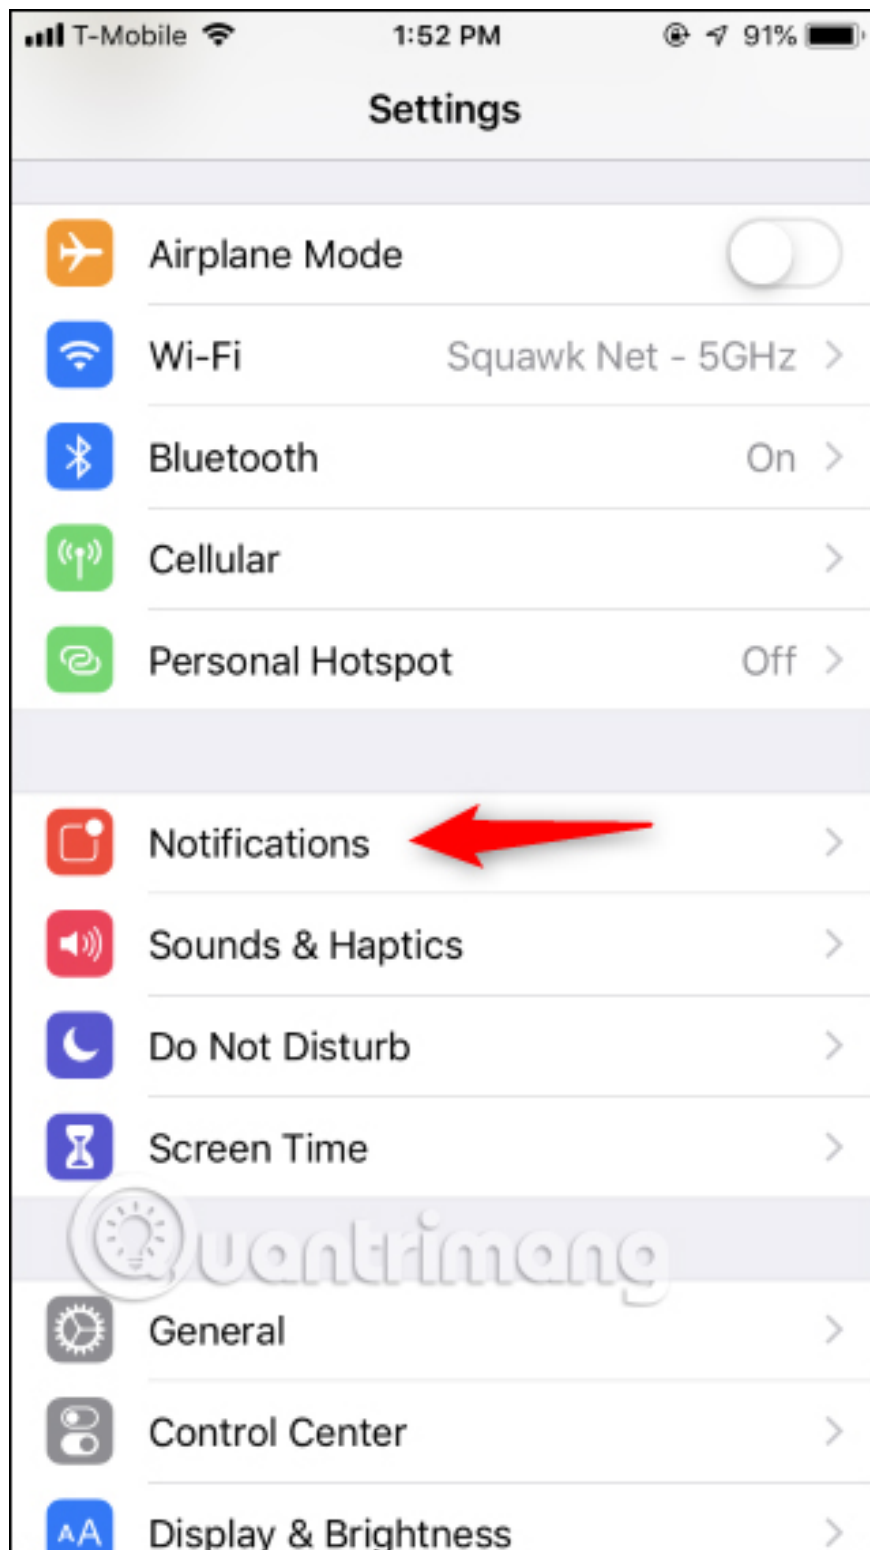

Thanks to iOS 12, users can group notifications on iPhone and iPad. This feature will group notifications of the same application together, making notification center (Notification center) become more neat. But Apple still lets you turn off group notifications for each application.

Thanks to iOS 12, users can group notifications on iPhone and iPad. This feature will group notifications of the same application together, making notification center (Notification center) become more neat. But Apple still lets you turn off group notifications for each application.

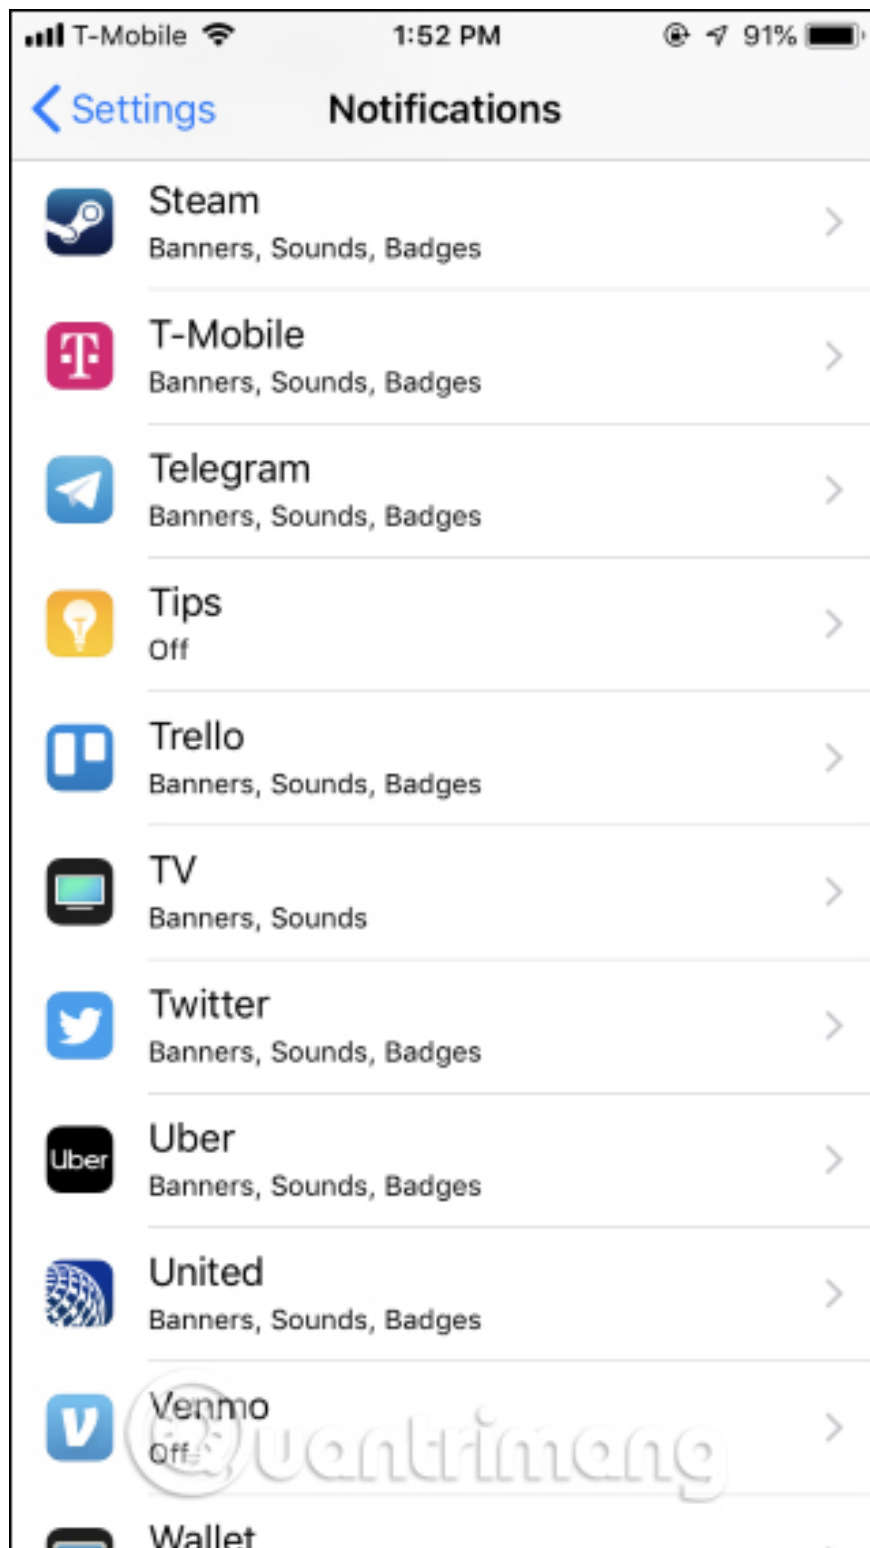

For example, many people want to see each message of the chat application in the notification center to be able to see quickly without touching it.

## How to turn off group notifications by each application on iPhone or iPad

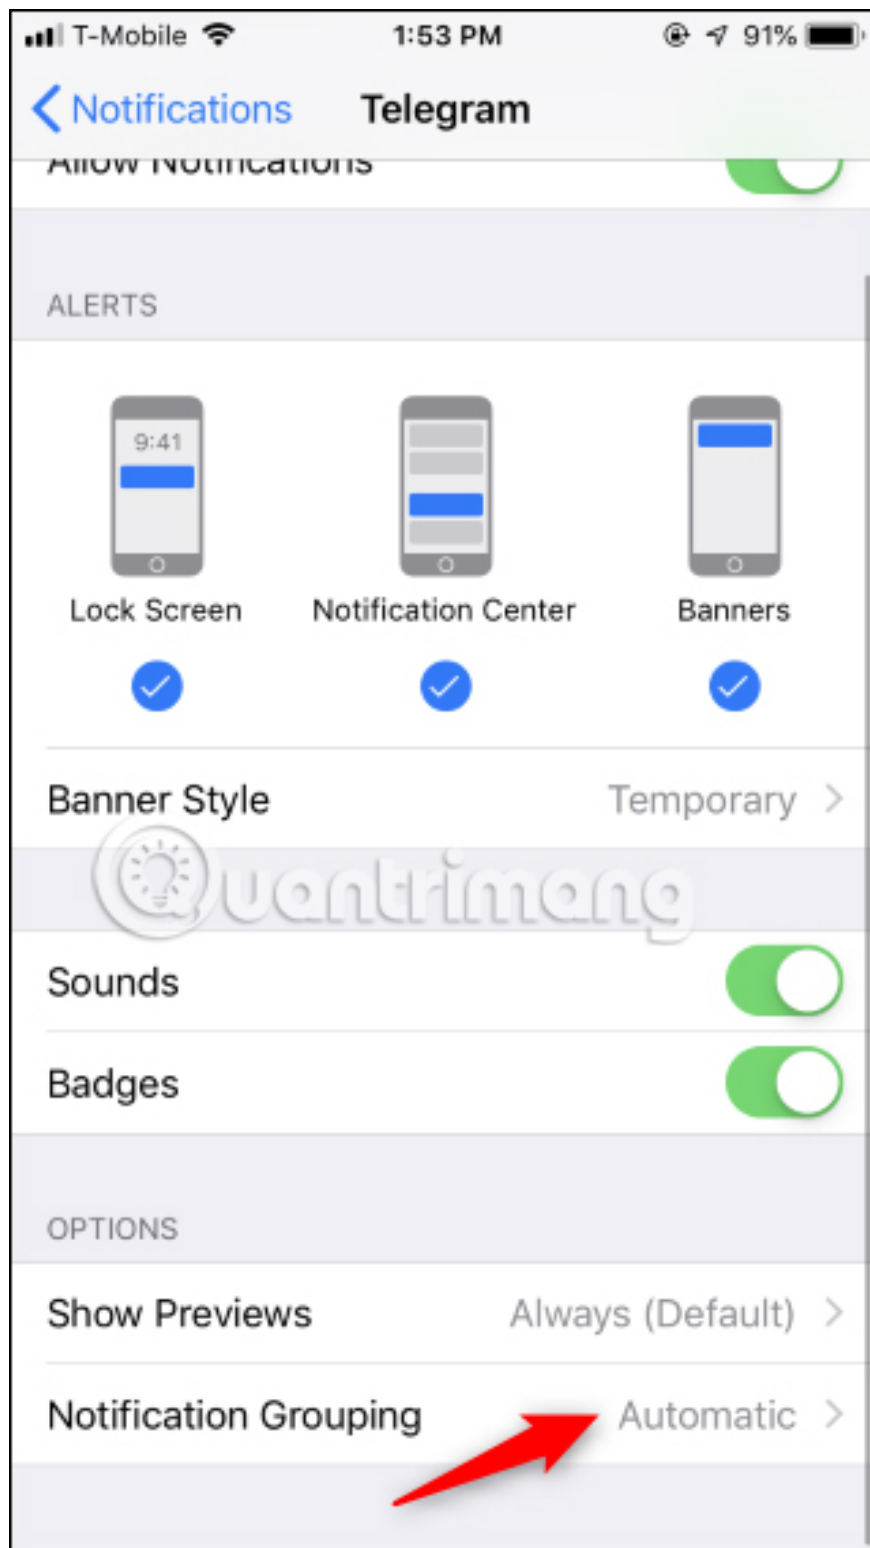

To remove the notification group on your iPhone or iPad, open **Settings** and then tap **Notifications** .

Find the application you want to turn off group notification and touch it.

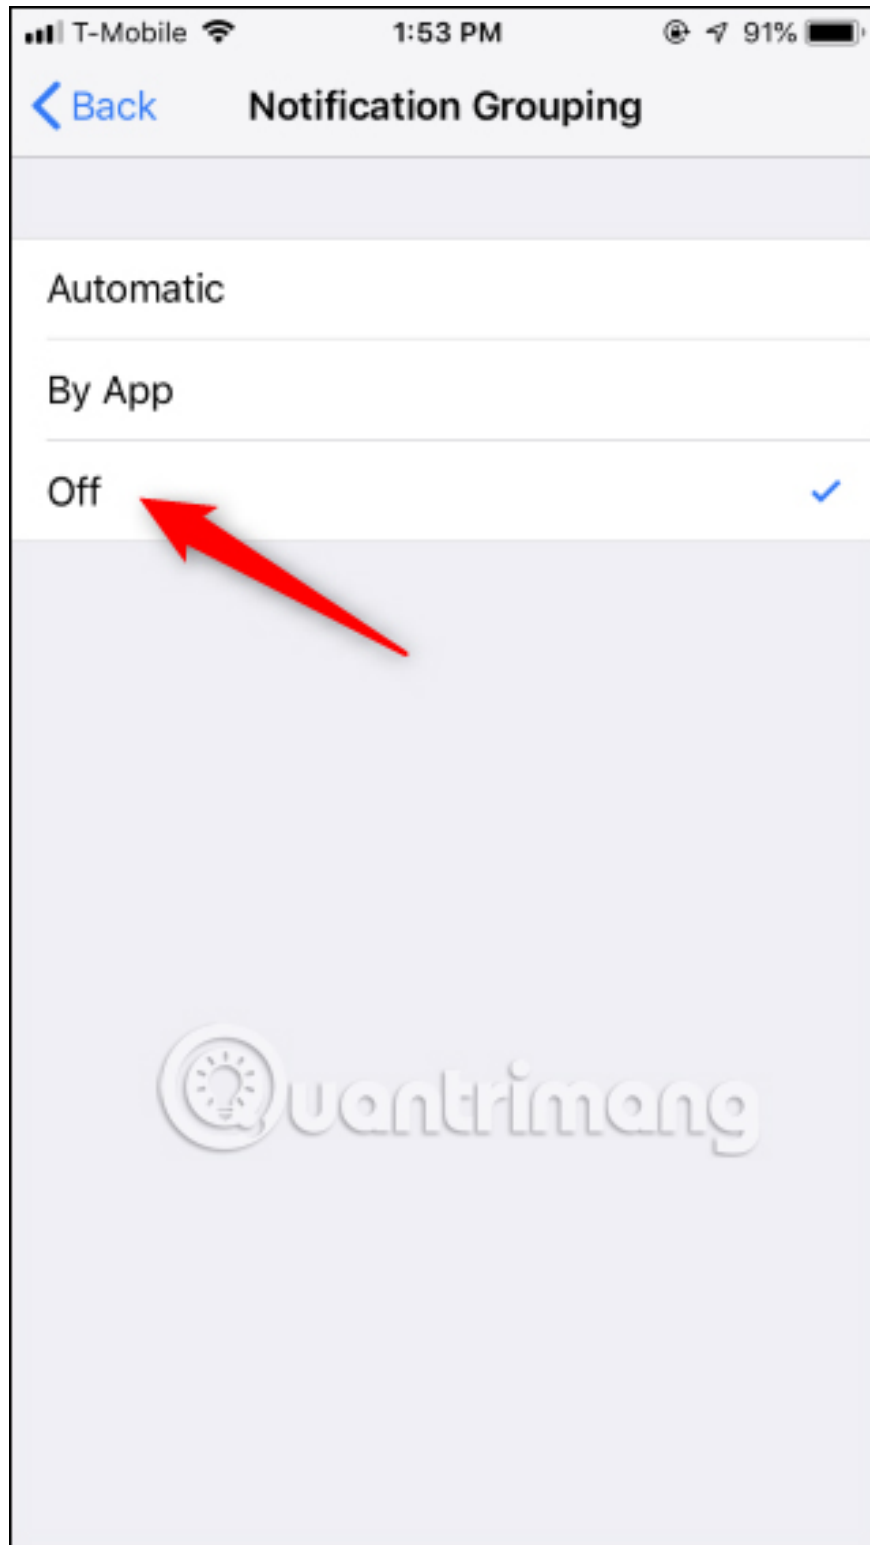

Touch **Notification Grouping** in **Options** at the bottom of the app notification settings screen.

Click the **Off** option to turn off the notification group feature for that application. You will see each application's notification appear separately in the notification center.

Repeat the above process for each application that wants to turn off group notifications. You cannot disable group notification for all applications on the system at the same time, but you must manually perform each application.

## Options in Notification Grouping

The default setting for applications on the system is **Automatic**. This option will always group notifications by application, but sometimes an iPhone or iPad creates a separate group for the same application. For example, you have some new email notifications and 5 of those emails come from the same person, iPhone or iPad will group

it into two groups: one group for 5 email messages of the same person and the other group all email of others.

If **By App** is selected, the notification center will always group notifications by application and no longer split the message. You can choose this option when you do not want the application to automatically split into small notification groups.

The **Off** option disables the notification group feature for each specific application.

I wish you all success!
