Turning off air conditioning when not in use is a job to save power and extend the life of the device. This job is not difficult but not all of us do it properly. If you regularly turn off the air conditioner by pressing the Off button on the remote control, you can turn it off by disconnecting the breaker. So what's the right way to turn off the air conditioner? Here, we will share with you how to turn off the air conditioner properly, please refer and apply immediately if you want to use air conditioner effectively and safely.

1. It is reasonable to turn off the air conditioner before going out
2. 4 ways to turn on the air conditioner without using control
3. 4 ways to turn on the air conditioner before going home

Should the air conditioner be turned off by remote or power off ?

According to refrigeration experts, when you turn off with the remote, it is true that the air conditioner is turned off, but the control circuit of the machine is still working in standby mode, which means that the air conditioner still works underground and yet Turn off completely. In this mode, the power consumption of the control circuit is negligible, so if the grid is stable, you can choose to turn off the air conditioner by pressing the Off button on the control.

If you do not need to use the air conditioner for a long time or your family is away for the whole day, it is best to disconnect the power completely after using it. This not only saves electricity, maintains the durability and life

expectancy but is more important to avoid unfortunate incidents such as short-circuit, short-circuit, abnormal ups and downs, phase loss, etc. causes electric pulse discharge to damage the control circuit of the machine.

So, here you know how to turn off the air conditioner properly, right? Hopefully this little tip will help you gain more experience using air conditioning, change the daily routine of turning off air conditioning to protect your device.
