

# How to turn off the notification LED on Samsung Galaxy Note 8

On Samsung Galaxy Note 8, when a new notification or device is about to run out of battery, the LED will light up for users to know. However, when using Always On Display mode, this LED will not be needed.

For most Samsung smartphones, there is an additional LED light mode, including Galaxy Note 8. By the system's default, when a new notification or device is in the state of running out of battery, the LED will play Bright for users to know. However, using LED lights is not really necessary when Always On Display mode is doing well for its notification task.

This mode will display all useful information such as date and time, battery capacity, missed calls, messages, reminders, etc. on a black screen even if the device has turned off the screen. Therefore, we can completely turn off the LED on the device if there is no need to use it.

1. How to disable notification LED Galaxy S8 / S8 Plus

## 1. Turn off the LED on the Galaxy Note 8:

### Step 1:

First of all, we click **the Settings icon** at the interface of the main screen on the device. In the Settings interface, click on **the Display item** .

Change the order or background colour of the Home, Back, and Recents buttons, or adjust the sensitivity of the Home button.

**Screen timeout**

After 30 seconds of inactivity

**Block accidental touches**

## **2. Turn off the LED when turning on Do not disturb mode on Note 8:**

When activating the Do Not Disturb mode on Galaxy Note 8, the device will automatically add some effects including LED lights for users to know when the mode does not have a bell or notification. In the case of night time when going to bed, it is not necessary to have LED lights on. We can turn it off when we go to sleep so we won't be bothered.

### **Step 1:**

In the **Settings** interface, click on **Sounds and vibration** . Next, click on **Do not disturb mode** .
