

How to turn off the SafeSearch feature on the Google search engine

SafeSearch is a built-in feature of the Google Search search engine, created for the purpose of ensuring that pornography is removed from users' search results.

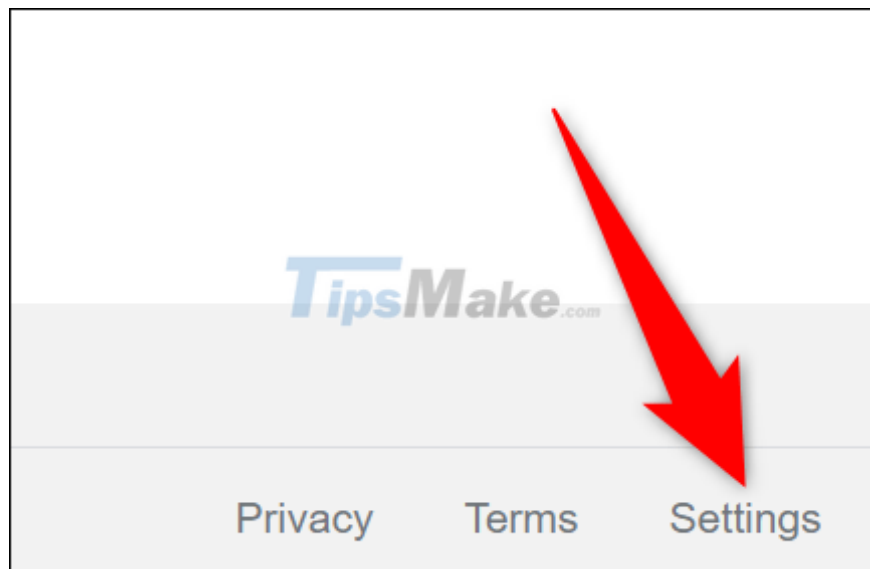

SafeSearch is enabled by default, so if you have a need to make your search results page more 'adult', you must manually disable it. Find out how to do it right here.

(Note: You only need to turn off SafeSearch on one of your signed in accounts. Setup will be synced across all devices using the same Google account).

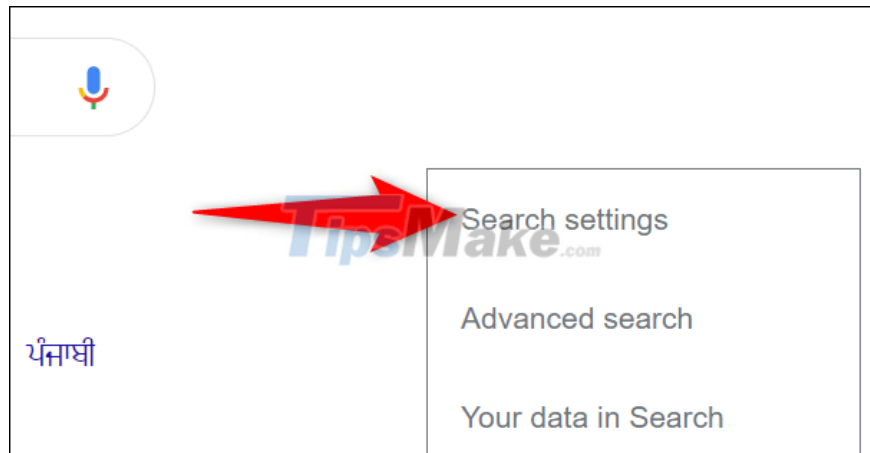

Turn off SafeSearch in Google Search on your computer

To turn off Google Search's SafeSearch filter on a Windows, Mac, Linux, or Chromebook computer, first open any web browser and go to Google Search.

In the bottom right corner of the Google website, click 'Settings'.

On the 'Settings' menu that appears, select 'Search Settings'.

You will be taken to the 'Search Settings' page. Here, in the 'SafeSearch Filters' section, turn off the 'Turn On SafeSearch' option.

Save your changes by scrolling down the page and clicking the 'Save' button at the bottom.

A message will appear, indicating that your settings have been saved. Click 'OK' to confirm.

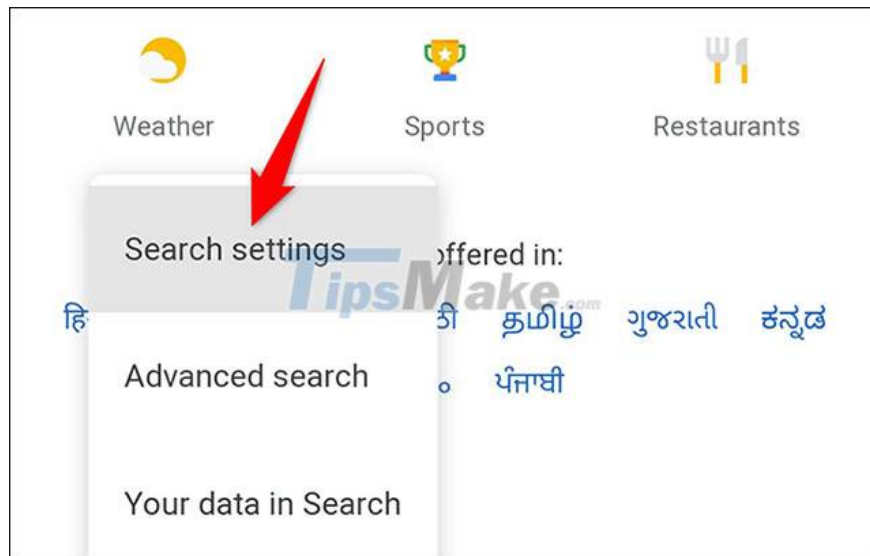

Turn off SafeSearch in Google Search on mobile devices

First, open any web browser on your phone and go to the Google search page.

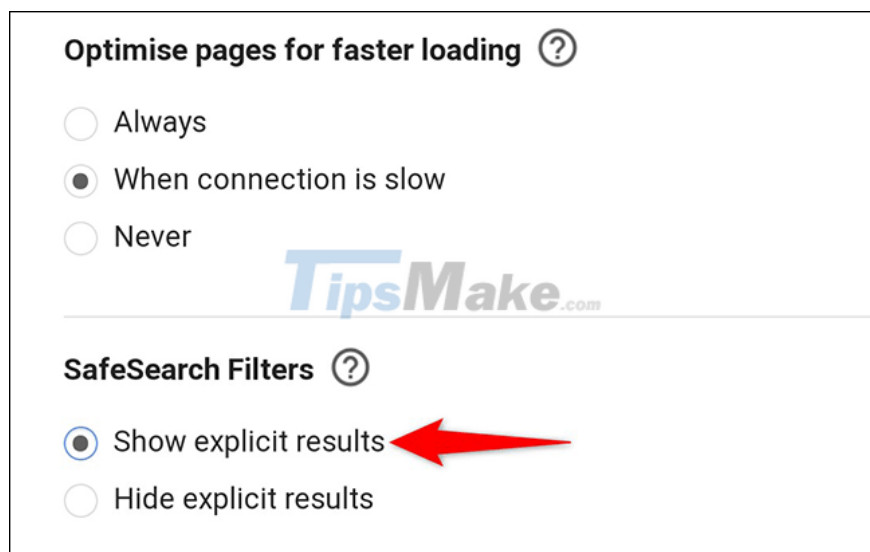

Look to the bottom of the page and tap on 'Settings'.

In the menu that opens, click on 'Search Settings'.

On the 'Search Settings' page, under 'SafeSearch Filters', enable the 'Show Explicit Results' option.

Scroll to the bottom of the page and tap 'Save' at the bottom.

[Save](#) [Cancel](#)

Saved settings are available whenever you sign in.

You will see a message that your settings have been saved. Click 'OK' to confirm.

SafeSearch is now disabled.
