

# How to turn off the split screen feature on the iPad

The Split View feature on the iPad allows you to run two applications in parallel on the screen when the iPad is horizontal. This article will show you how to turn off the screen split feature on the iPad.

The Split View feature on the iPad allows you to run two applications in parallel on the screen when the iPad is horizontal. Split screen is a great feature when performing multi-tasking, but some users do not like this feature. So this article will guide you how to turn off the feature to split screen on iPad.

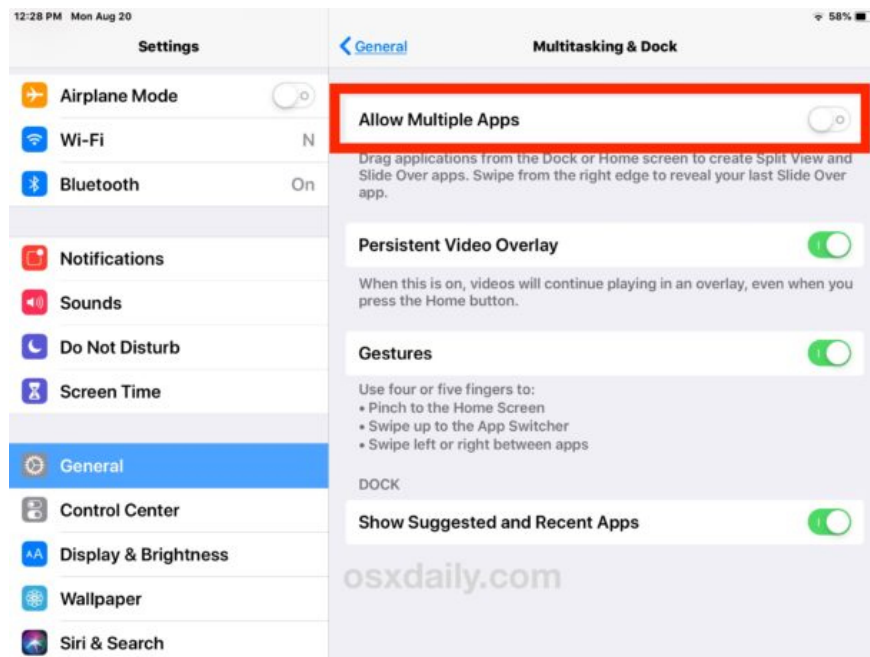

1. How to split screen on iPad

## How to disable the split screen feature on the iPad

**Step 1** . Access the **Settings** application.

**Step 2** . Go to **General** and select **Multitasking & Dock** .

**Step 3** . Disable **Allow Multiple Apps** option to disable the split screen feature.

**Step 4** . Exit the **Settings** application as usual and this change will take effect immediately.

When the **Allow Multiple Apps** option is turned off, the feature to split the screen and the applications used in this mode will not work anymore. However, there is one exception to that on Safari. It is still enabled even if you turn off the option because this feature on Safari is separate from other multitasking settings.

One thing to note is that when disabling the feature to split the screen by turning off **Multiple Apps** settings, you also turn off Slide Over on the iPad because this feature is part of multitasking.

If you decide to turn on the screen split feature again, simply turn on the **Allow Multiple App option** to reactivate Split View and Slide Over.

I wish you all success!
