How to turn off Update Windows 10 thoroughly. In order for the Windows computer to work stably and avoid errors such as system conflicts, we must update Windows regularly. However, Windows updates are usually quite heavy and it quickly fills up the device memory

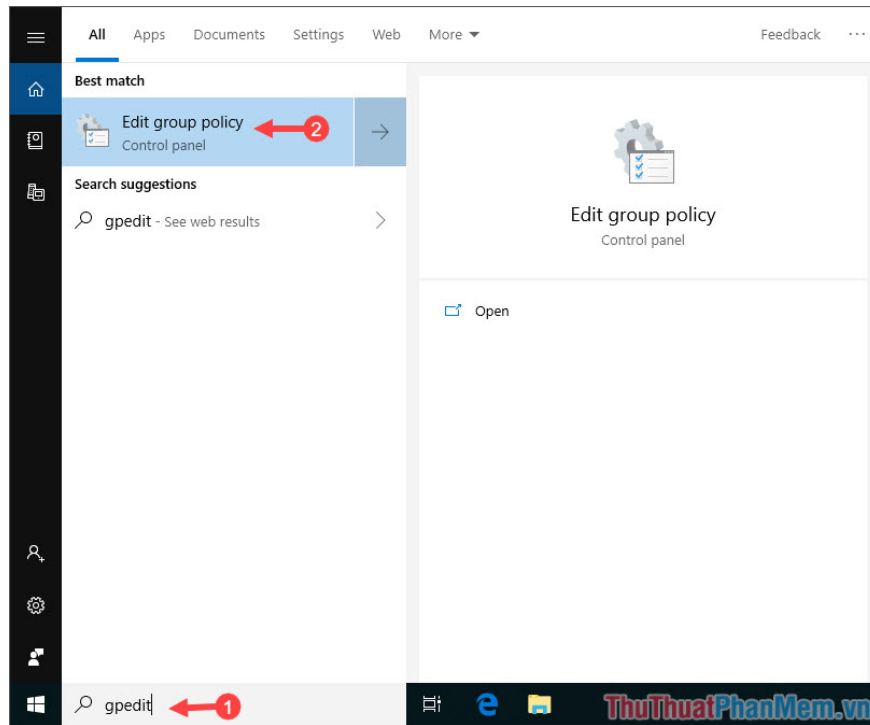

In order for the Windows computer to work stably and avoid errors such as system conflicts, we must update Windows regularly. However, Windows updates are often quite heavy and quickly fill up your computer's memory.

To avoid unexpected errors when updating, you can turn them off. However, if you turn off Update Windows in the Settings section, your computer will still silently receive updates and can install itself at some time. Let's take a look at the following article to know how to turn off Windows Update thoroughly.

First, we will turn off Windows Update in **Group Policy**

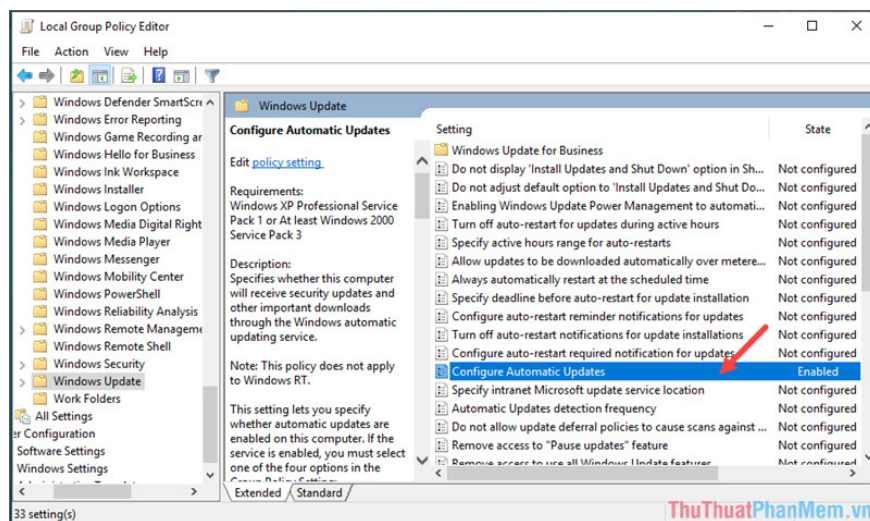

Step 1: We click on the search box next to the Start menu and enter the keyword **gpedit** and then click on the first result is **Edit group policy** .

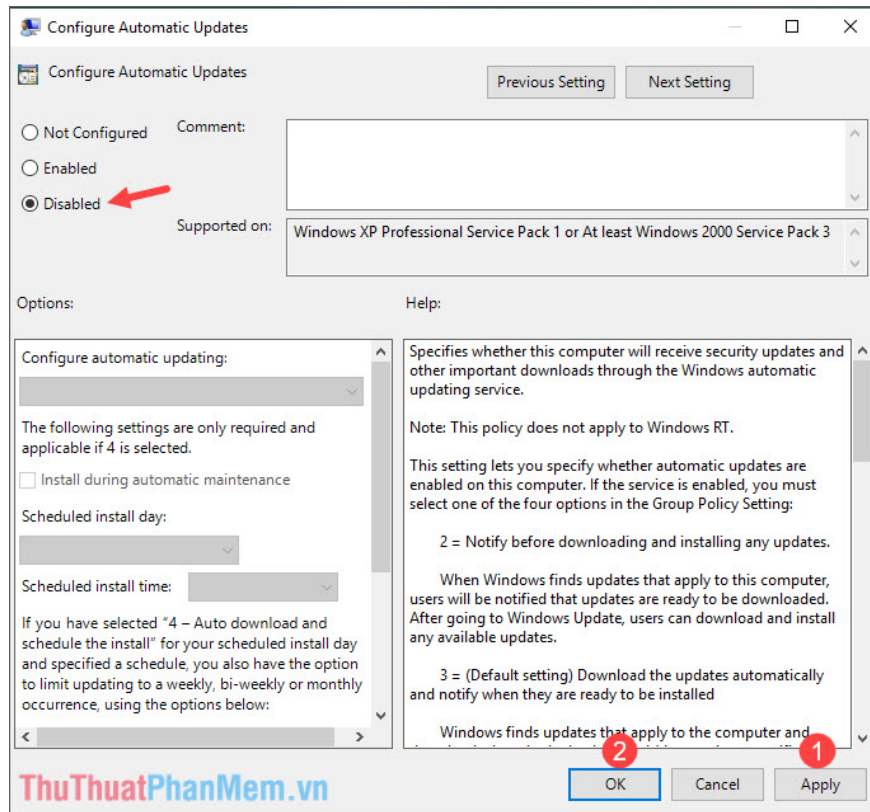

Step 2: The **Group Policy** dialog box appears, click in turn according to the following instructions

Computer Configuration / Administrative Templates / Windows Components / Windows Update.

After opening the **Windows Update** option in **Group Policy** , find and double-click the **Configure Automatic Updates** option.

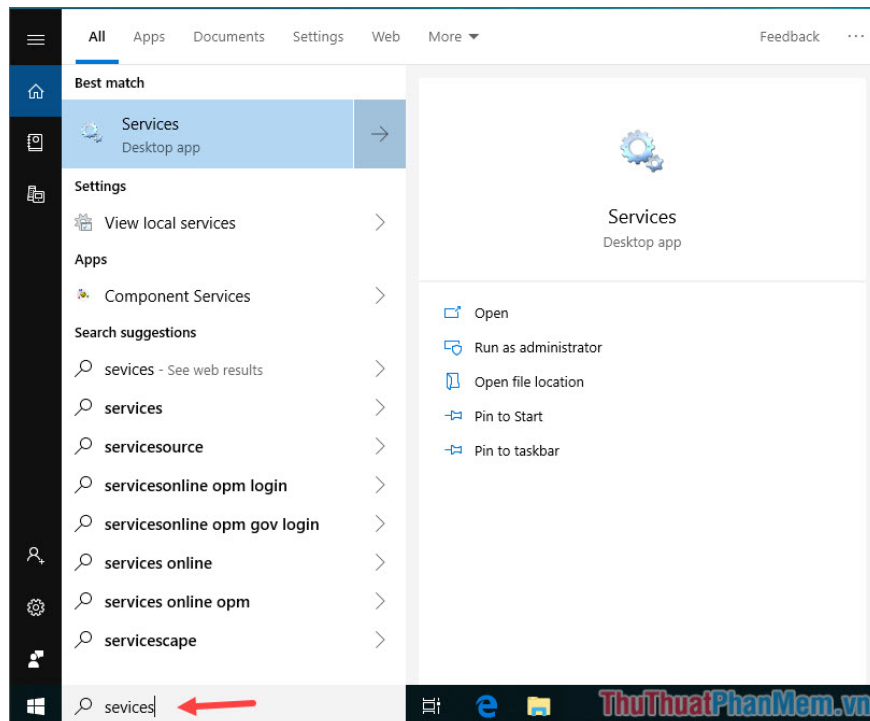

Step 3: You set the option Disabled. Then press **Apply (1)** and **OK (2)** to let Windows save the settings for your computer.

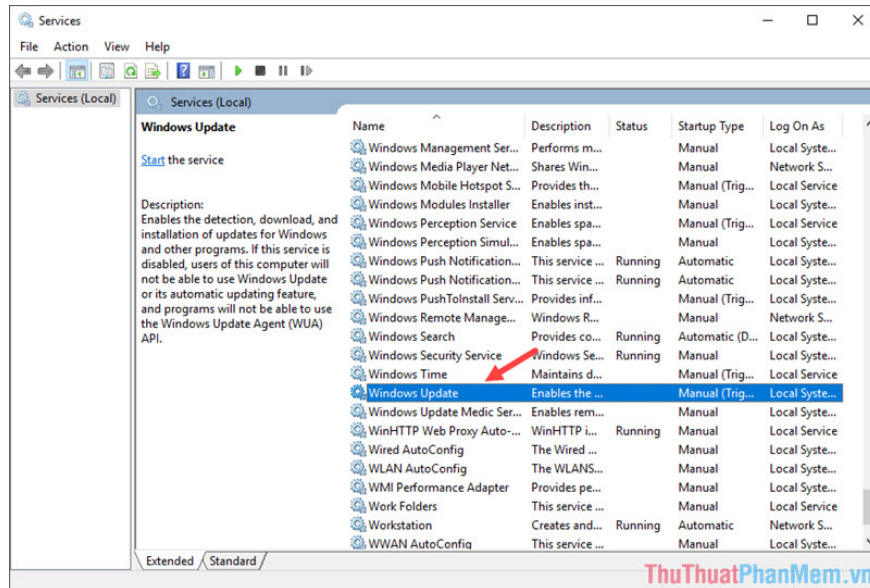

After turning off Update Windows with **Group Policy** and you still have no peace of mind, we can move on to the next step of turning off Windows Update with **Services**.

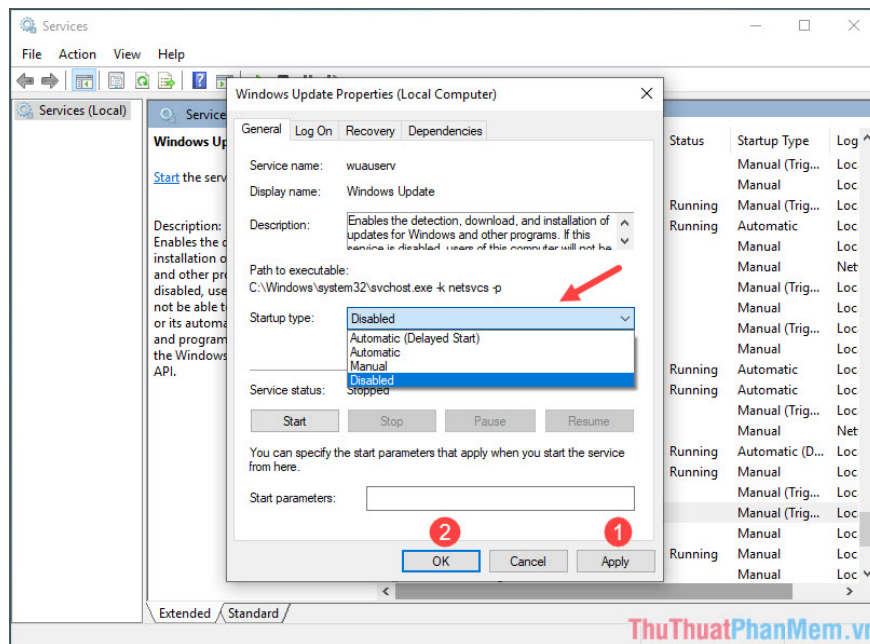

Step 1: We click on the search box next to the Start menu and enter keywords **Services** and then click on the first result is **Services** .

Step 2: After the **Services** dialog box appears, scroll down to find **Windows Update** and double-click left.

Step 3: After the **Windows Update Properties** dialog box appears, navigate to the Startup type and switch the option from **Automatic Manual** to **Disabled** . Then, click **Apply (1)** and **OK (2)** is done.

With 2 ways to turn off Update windows above, surely Windows updates will no longer bother us in the future. For the Windows Update feature to work again, you can revisit the above options, but instead of the **Disable** option , select **Enable Automatic** to turn it on.
