

# How to turn off your Android phone screen using the Smart Screen On Off application

With the Smart Screen On Off application, you can turn on or turn off all Android devices by pressing the shortcut on the screen, double-clicking the screen or placing your hands near the proximity sensor (proximity sensor).

If you buy an expensive Android phone, you will definitely want to use it for at least a year before thinking about buying a new phone. Even if your phone is still good, you can resell it and have money to buy a new one. To keep the phone in good condition, you should use a screen protector and avoid paralyzing the power and volume keys.

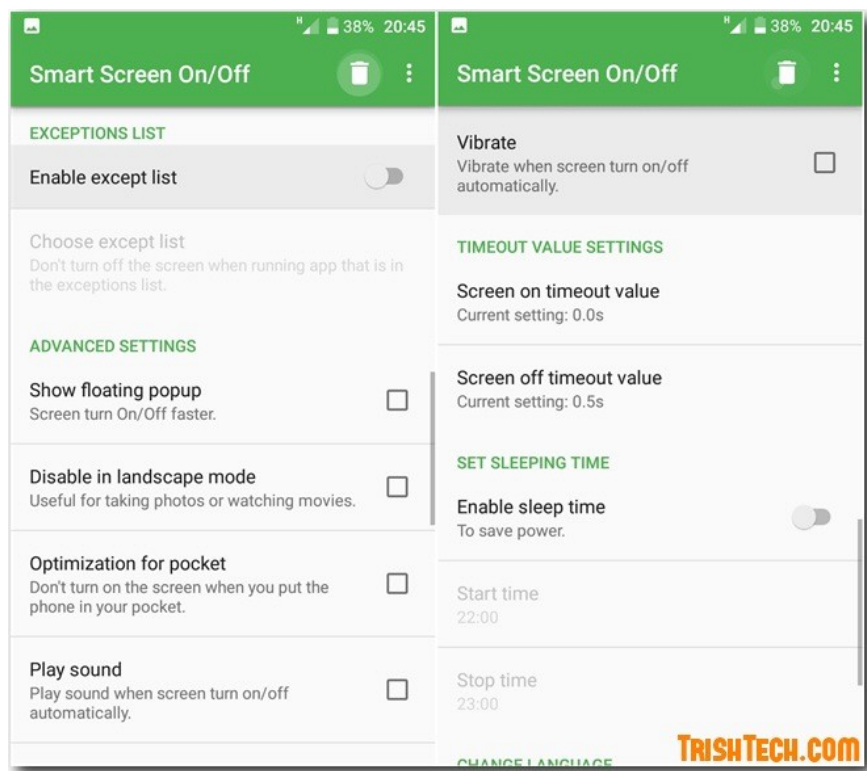

## 1. How to lock the Samsung phone screen without using the power key

Most people know how to protect the screen with a patch, but not many of us know how to avoid using the power button regularly and keep it working for a long time. With the Smart Screen On Off application, you can turn on or turn off your Android device by pressing the shortcut on the screen, double-clicking the screen or placing your hand near the proximity sensor (proximity sensor).

After installing the Smart Screen On Off application on the Android device, you must enable admin permissions for the application. If not activated, the application will not be able to turn off the Android screen. From the settings, you can choose many different features such as: creating shortcuts on the main screen to turn off the screen immediately; Double-click to turn off the screen; or swipe through the proximity sensor to turn the screen on or off.

In advanced settings, you can display shortcut keys near the side of the screen for easy use, turn off applications when in landscape mode, optimize applications for pocket mode, shutdown timer and etc.

The Smart Screen On Off app for Android displays many ads when you use it. However, it can help you extend the life of the power button for your mobile phone.
