

How to turn on and off UAC on Windows 10

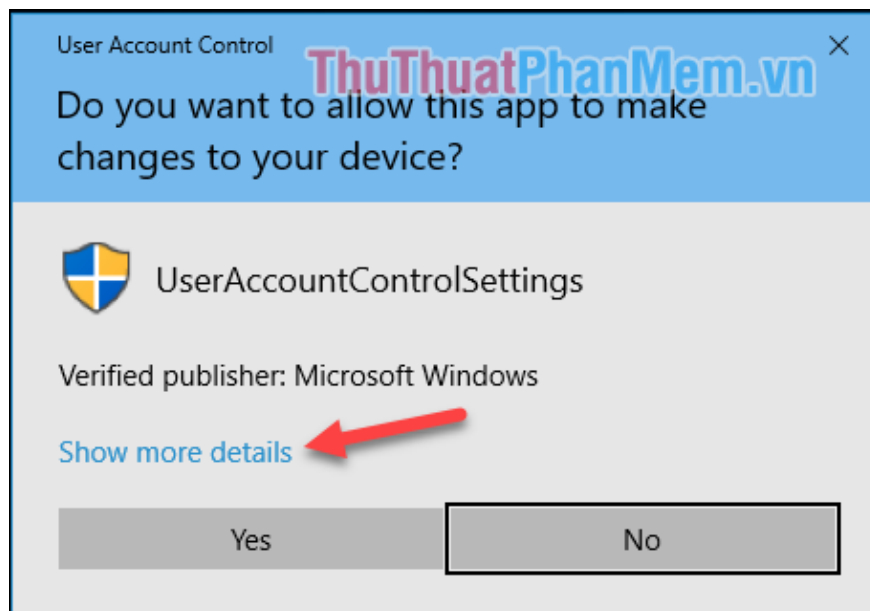

How to turn on and turn off UAC on Windows 10. During the process of using the computer, do you realize that every time you run an application or install an application, there is an existing window so we can choose Yes or No. to confirm whether we run the application or not

In the process of using a computer, do you realize that every time you run an application or install an application, there is a window that appears so let us choose Yes or No to confirm whether we run the application. Use that or not. This is the UAC feature in Windows, this feature will help protect our computer to prevent software from automatically running or changes affecting the computer system. However, most users feel uncomfortable when these messages appear. So in the following article TipsMake.com will guide you how to turn off UAC extremely fast and simple, please refer.

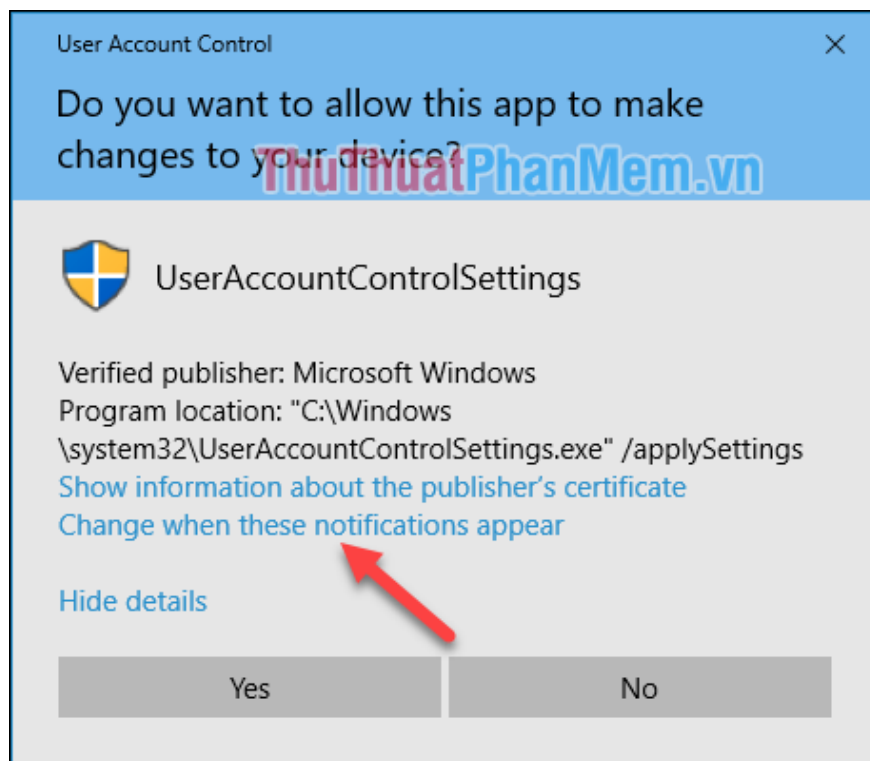

Method 1: Disable UAC right on the notice

When the UAC notice pops up, click the **Show more detail** item

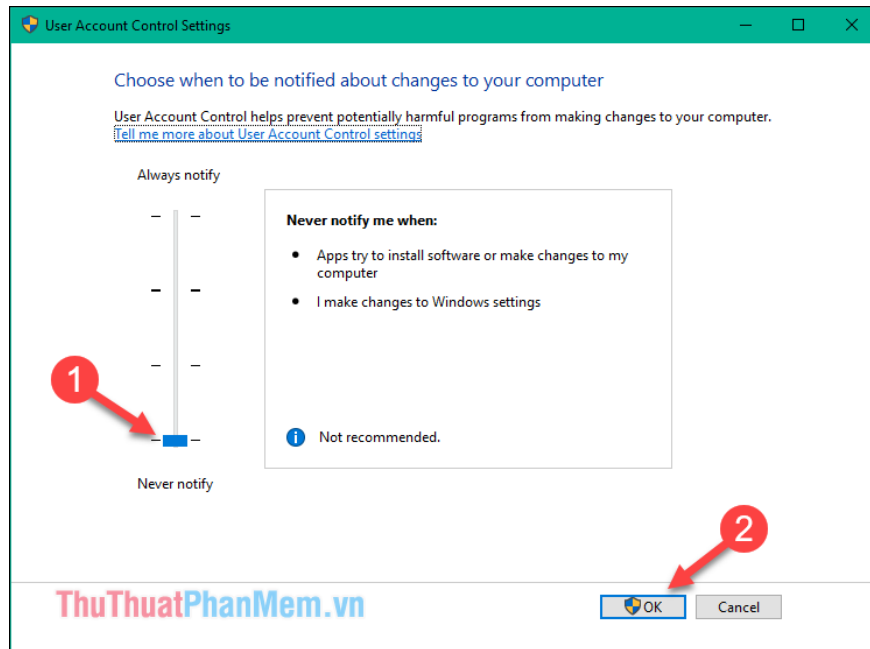

Next select **Change when these notifications appear**

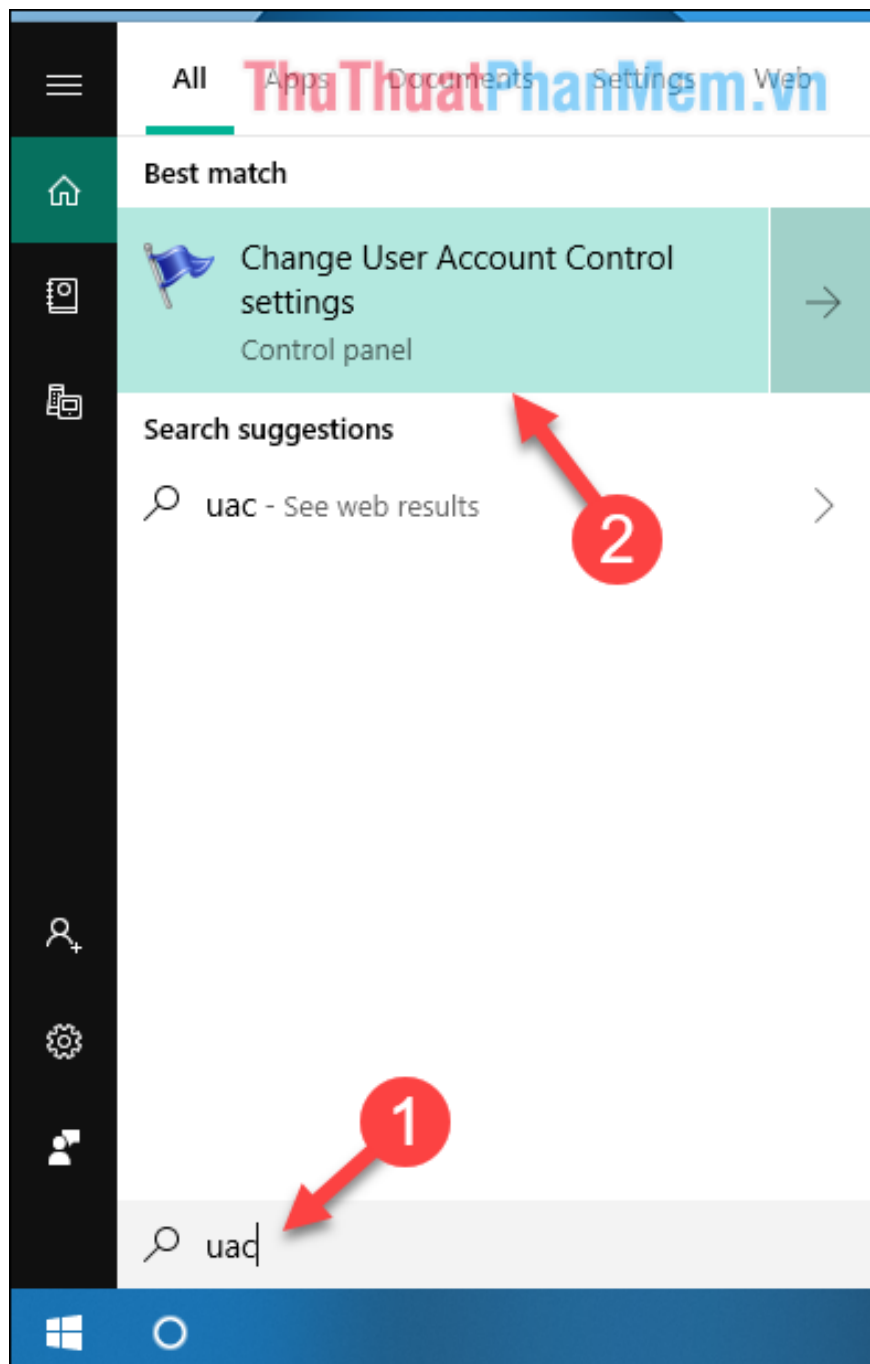

Now the **User Account Control Settings** window pops up, drag the slider to the bottom (Never notify) then click OK to save.

So, UAC has been turned off.

Method 2 : This way is the fastest way we can do.

You open the search window on windows 10 then enter the keyword uac, then the results appear you choose **Change User Account Control settings**

Then **User Account Control Settings** window appears you perform exactly the same as how 1 is finished.

Thank you for watching, wish you success!
