Reasons why Asus laptop keyboard does not light up

The condition of the Asus laptop keyboard not lighting up may come from one of the following 3 common causes:

Case 1: The user has not enabled the laptop keyboard backlight feature properly. To fix this error, you can access the Control Panel application and turn on the laptop's backlight. However, users need to ensure that your laptop supports the keyboard backlight feature.

Case 2: If you have recently updated the operating system or applications related to the laptop operating system, this may cause the ATK Package files to be corrupted. This causes the Asus laptop keyboard to not light up. To solve this problem, you just need to reinstall the ATK Package file to help enable the keyboard backlight feature.

Case 3: In case you have turned on the keyboard backlight properly and the ATK Package files are also not corrupted, it may be that the backlight is broken. At this time, you should bring your laptop to a genuine warranty center for timely inspection and repair support.

2 ways to turn on Asus laptop keyboard light

To turn on the Asus laptop keyboard backlight, users can apply one of the two methods below:

1. Turn on the laptop keyboard light using Windows Mobility Center

Windows Mobility Center is a tool used to help control all laptop activities, including turning on the keyboard backlight. The way to do it is as follows:

1. **Step 1:** First, click on the Windows icon, go to the search bar and find the **Control Panel** application .
