

How to turn on Google SafeSearch for PC and Android

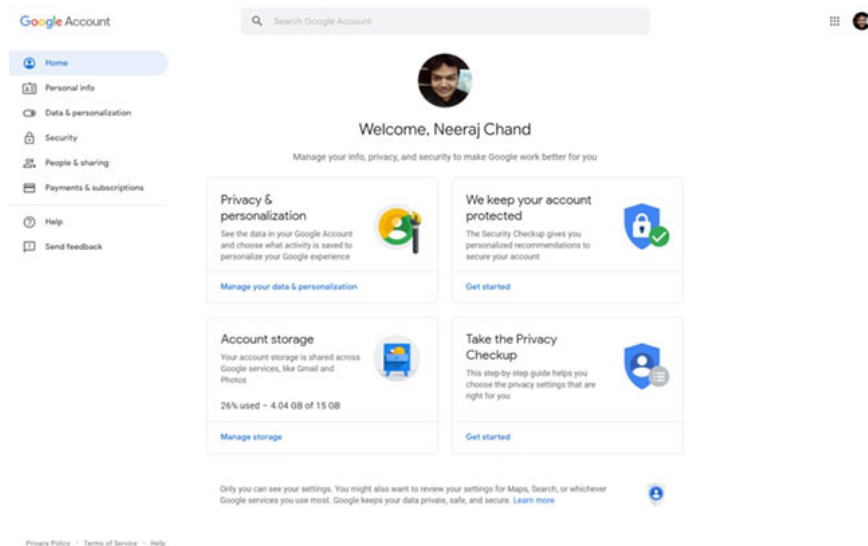

Along with tons of useful tools available online for everyday use, there's the same amount of dangerous, disturbing content that you want to avoid.

Internet is the way to transmit information of the world. That means, along with tons of useful tools available online for everyday use, there's the same amount of dangerous, disturbing content that you want to avoid, when searching online. to cater to your needs.

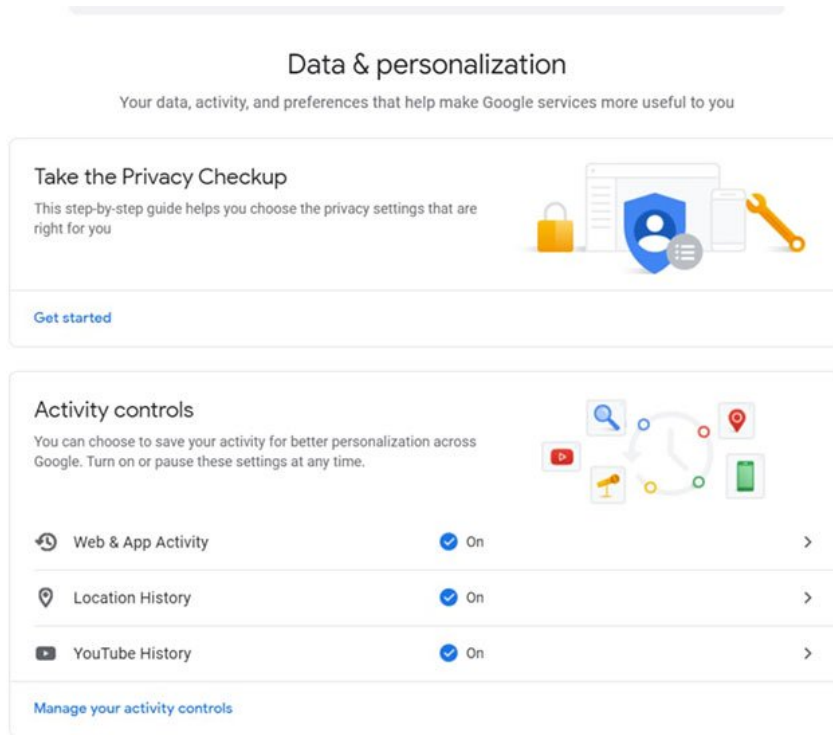

Unwanted content is a search term that accidentally appears in Google search history and becomes part of your online profile data. Luckily, Google gives you the option to filter out offensive content while using its search engine.

Filter search content on PC

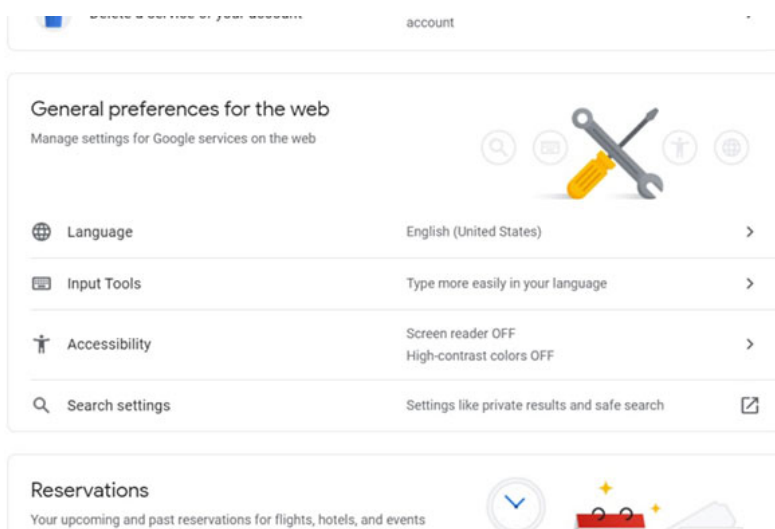

Access your Google account by first visiting your main Gmail page. Click on the profile picture in the upper right corner and select the **Google account** tab .

On the newly opened page, click the **'Data and Personalization'** option located on the left. You will be redirected to the page tracking your activity data and interests.

Scroll down until you get to the section titled **General Preferences for the Web** . The last option in this section is related to the **Search Settings** that you need to click.

You will now be taken to the section of your Gmail profile to control how much your Internet searches are monitored.

Click the box next to the words '**Turn on SafeSearch**' near the top of the page.

SafeSearch Filters

SafeSearch can help you block inappropriate or explicit images from your Google Search results. The SafeSearch filter isn't 100% accurate, but it helps you avoid most violent and adult content.

Alternatively, if you want to lock SafeSearch on your computer so that other people using the device cannot undo the SafeSearch settings, click on the blue **'Safe Lock'** and follow the prompts to confirm your identity. Gmail account, then confirm that you want to enable the lock for this feature.

Filter search content on Android

Through Chrome

Setting the SafeSearch option on mobile phones is practically identical to the procedure done on a PC, but the layout is a bit different.

Once again, visit the Google Account homepage on Chrome browser.

Viewing web pages in app

Scroll down until you see the SafeSearch option and press the switch next to turn it to **ON**.

SafeSearch is a simple and powerful tool to ensure your computer is protected from the worst content type that the Internet provides. However, keep in mind that because SafeSearch uses AI, it can sometimes filter out content that is useful to you, categorized as '**Explicit Content**'. This is why it is advisable to keep your search terms as specific as possible. Another workaround is to turn off SafeSearch and simply use incognito mode while searching for some topics you don't want displayed on your Internet history page.

Hope you are successful.
