To identify whether your laptop keyboard has built-in lighting from the manufacturer, check with **TipsMake** with the lighting symbol hint printed on the button.

If there is no such symbol on the laptop keyboard you are using, it means your computer model does not support keyboard lighting.

Benefits of turning on the laptop keyboard light

As mentioned, equipping laptop keyboard lights is said by manufacturers that this lighting feature brings users many significant benefits.

The most obvious advantage is that it helps protect users' eyes and reduces eye strain when working in low-light environments. This integrated lighting feature helps support and protect the user's eyes.

In addition, the keyboard lighting system with a variety of different display colors such as blue, red, purple, yellow. also highlights the user's device. This contributes to increasing the aesthetics of the device in the eyes of users and people around.

How to turn on HP laptop keyboard light with Windows 10

The most typical line of laptops equipped with keyboard lights is HP laptops with Windows 10. In the following content, TipsMake will guide users on 3 ways to turn on HP laptop keyboard lights. Specifically:

1. Turn on the HP keyboard light with the shortcut

For each different HP laptop line, the manufacturer will change the combination of buttons to turn on the light to create diversity and specificity for the machines.

First is how to turn on the HP laptop keyboard light with a key combination. In the case of HP laptops equipped with a backlight keyboard, the Keyboard Backlight icon is a keyboard image with a few rays of light. To perform the operation of turning on the HP laptop keyboard light, users only need to press the key combination **Fn + Space Bar** .

In the HP laptop line, there is a keyboard lighting symbol printed on the F5 key. To activate the light, users use the key combination **Fn + F5** .

As for some other HP models, the manufacturer integrates the keyboard light switch above the F3 key. Users to adjust the light on/off just need to press the **F3** button .
