

How to turn on keyboard light on Dell laptop?

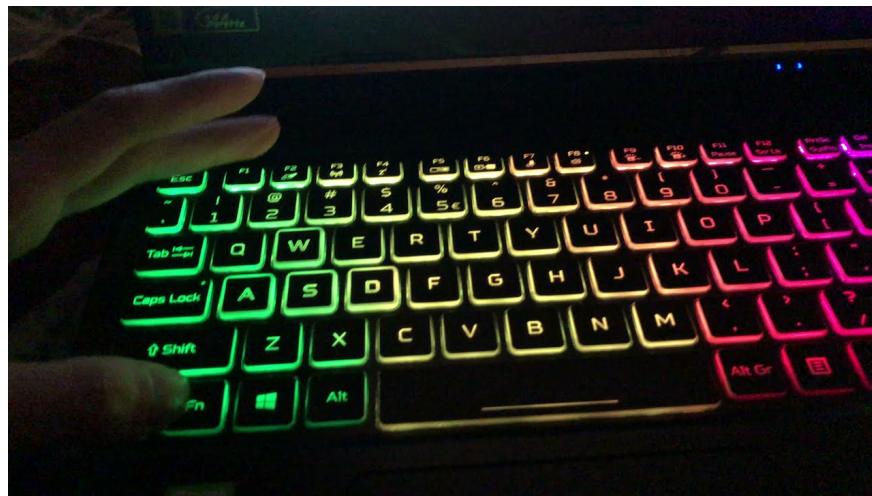

A laptop with a keyboard light will be very useful, especially when you work at night. So how do you turn on the keyboard light on a Dell laptop?

When working at night or in areas with limited light, the keyboard light will help you operate more easily. Many Hacom customers send technical support requests for how to turn on the keyboard light on Dell laptops. If you are also looking into this issue, please see the article below by TipsMake !!

Advantages of using laptop models with keyboard lights

Laptops have a keyboard light system that helps users type or enter data more accurately and quickly in all lighting conditions. From there, users can work more effectively and protect their eyes better.

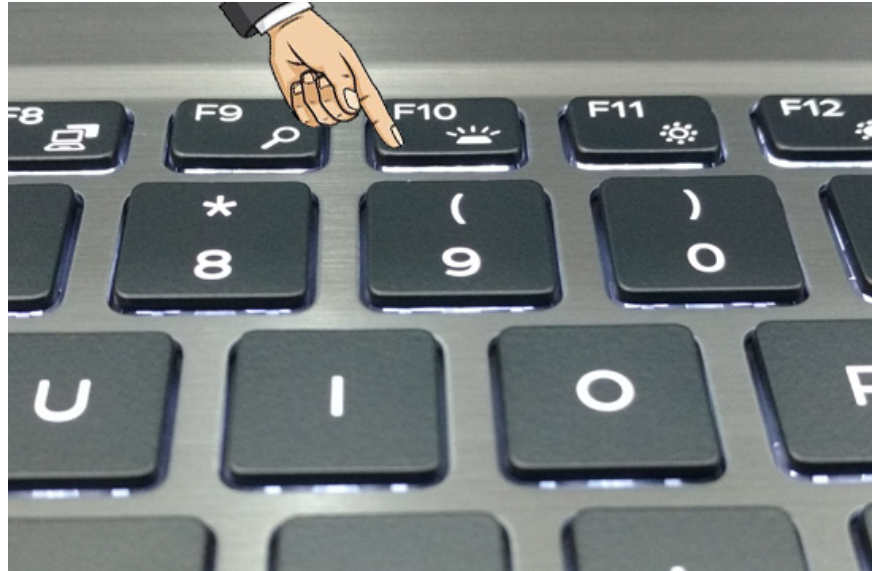

Some laptop lines are also equipped with a multi-color lighting system such as blue, red, and green, which is extremely prominent, creating a lively, attractive, and highly aesthetic working space for users.

In addition, keyboard lights also help users easily see dirt around the keyboard, making it easier to clean and improve computer life.

Does your Dell laptop have a keyboard light?

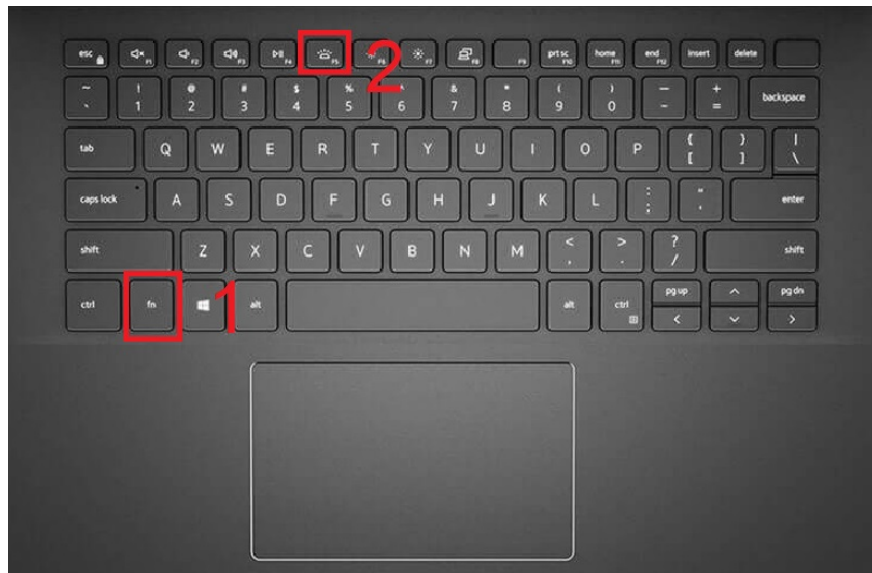

To know if your Dell laptop keyboard has a light or not, you should look on the computer keyboard to see if there is a key with a light symbol printed on it. If there is one on the keyboard, then your Dell laptop definitely has a keyboard light.

How to turn on keyboard light on Dell Laptop?

To turn on the Dell laptop keyboard light, you need to press the Fn + F5 key combination, then the keyboard will light up at level 1 with a moderate brightness level. If you want the keyboard light to be brighter, continue to press the Fn + F5 key combination one more time with level 2 brightness.

In addition, some other Dell laptop lines will have a way to turn on the keyboard light combination such as: ALT + F10, Fn + F10 or F10,.

* Note: to be able to turn on the keyboard light with the shortcut key, your laptop needs to have all the drivers installed, especially the keyboard driver.

Another way, if you use Windows 10, you can do the following:

Step 1: Search and open Control Panel >> select Windows mobility center.

Step 2: Select Hardware and sound >> Windows mobility center >> Enable in Keyboard backlight.

Step 3: Here, users customize the brightness as desired and then press OK to complete.
