

# How to Turn on Laptop Keyboard Light Simply on Many Models

How to turn on laptop keyboard lights on many popular models such as Dell, Lenovo, Asus, HP, Mac... to help you type faster and more accurately.

Knowing **how to turn on the laptop keyboard light** will help you type more accurately in low-light spaces. Especially useful when you need to work or often play games at night. Refer to how to turn on the keyboard light of the most popular laptop models on the market in the article below.

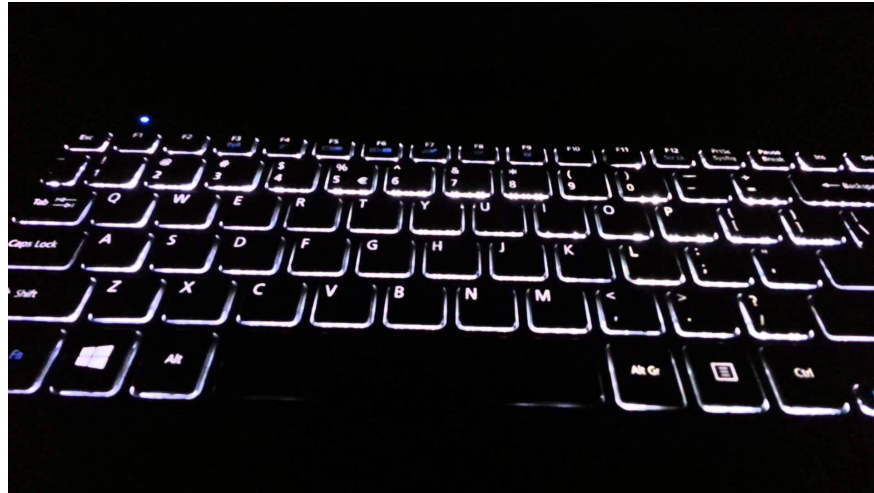

## Popular types of keyboard lights

Laptop keyboard lights are LED strips located under the keys. Most laptops today are equipped with keyboard lights to help users easily work and use computers in low-light environments. Currently, laptop keyboard lights are mainly of 3 types:

**Single-color keyboard light:** This is the most common type, characterized by white, red or blue LED colors. This type of light is often equipped in mid-range laptops and users can customize the brightness level according to their needs.

**RGB LED keyboard light:** commonly found in mid-range gaming laptops and office laptops. This type of keyboard light allows users to easily customize the color to their liking with key combinations.

**RGB Per Key LED Keyboard Light:** usually equipped in high-end gaming laptops. This type of keyboard light allows you to change the color of each key according to your own preferences.

## How to turn on laptop keyboard light using Control Panel

If you are using a laptop with Windows 10 operating system, you can easily turn on the keyboard light by using Control Panel. The specific steps are as follows:

**Step 1:** Click on **Control Panel** on the laptop screen.

**Step 2:** Search for **Windows mobility center in the Control Panel** window .

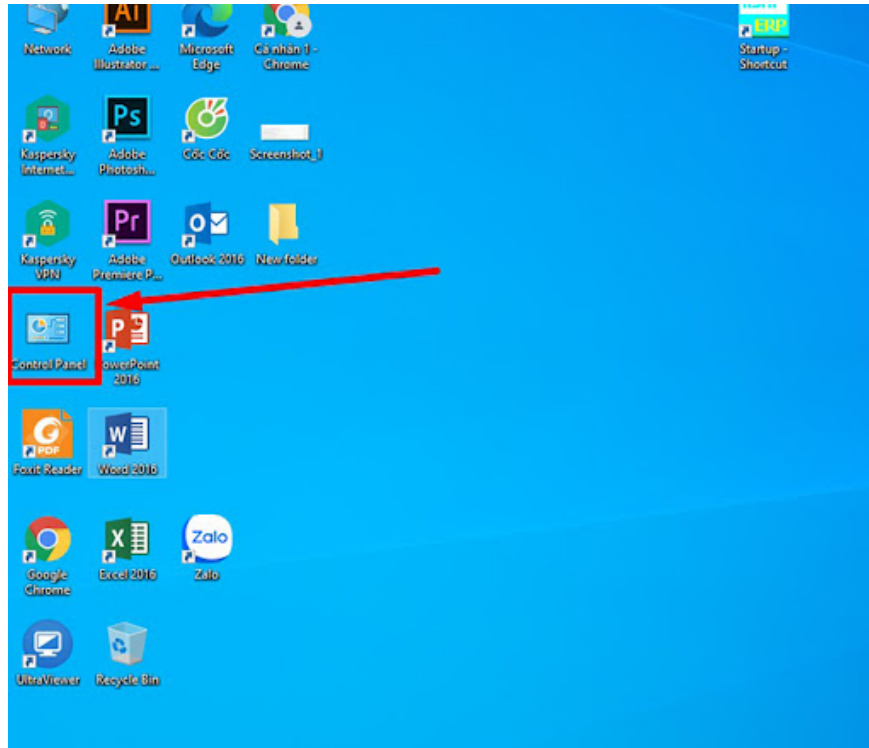

**Step 3:** Open **Hardware and sound**.

**Step 4:** Open **Windows mobility center** , select **Keyboard backlight** .

**Step 5:** Open the **Keyboard backlight** tab to display the options. Click to enable the **Keyboard lighting** feature .

**Step 6:** Customize the desired keyboard light brightness.

**Step 7:** Click **OK** to complete.

## How to turn on laptop keyboard light using software

**For Windows operating system:** First, press Windows + S > **Windows Mobility Center** . Next, adjust the keyboard brightness in **Keyboard Brightness** . Drag to the right if you want to increase the keyboard brightness. Conversely, drag to the left if you want to decrease the brightness.

**In case you are using MacOS:** First go to **Control Center** > **Keyboard Brightness** . Then, you just need to drag the slider left or right to customize the keyboard light brightness as you like.

Depending on the type of laptop, the shortcut keys to turn on the keyboard light will be different. Below, we will guide you to turn on the keyboard light on some of the most popular laptop models today.

# How to turn on and off keyboard lights on some popular laptop models

## How to turn on Dell laptop keyboard light

Most of Dell's current laptop lines are equipped with modern keyboard lights. However, each line will have different key combinations to turn on the lights that users need to note. Specifically: For **Dell 14 Inspiron 7000, 17 5000, 2016, 15 laptop**

lines, the key combination used to turn on the keyboard lights is **ALT + F10**.

- For **Inspiron 15 5000, Latitude E7450 / E7470, Latitude E5550**, the key combination to turn on the light is **Fn + F10**

- **Dell XPS 2016 and 13** you just need to press **F10** to turn on the light.

- For Dell Studio 15 series, the key combination to turn on the light is **Fn+F6**.

## Turn on HP laptop keyboard light

Similar to Dell laptops, the key combination used to turn on the HP laptop light also depends on each model. You can try the combinations **Fn+F5, Fn+11** or **Fn+9**. In addition, some HP models have the key combination to turn on the keyboard light as **Fn+Space (space key)**.

Laptop keyboard light helps typing more accurately at night

## Turn on Asus laptop keyboard light

Asus laptop users can easily recognize the keyboard light button through the icons and symbols printed by the manufacturer on the keyboard. If your laptop does not have this icon, it means that the keyboard is not equipped with lights.

Normally, the symbol to turn on the keyboard light on an Asus laptop will be the **F3** or **F4** key on the keyboard. When you want to turn on the keyboard light, just press the **Fn + F4 key combination**.

## Turn on Acer laptop keyboard light

To turn on the Acer laptop keyboard light, just press the key combination **Fn + F9**.

## Turn on Lenovo laptop keyboard light

Most Lenovo laptops like Lenovo IdeaPad and ThinkPad are equipped with keyboard lights. To turn on the lights, simply press the **Fn + Space key combination**.

## Turn on MSI laptop keyboard light

With MSI laptops, to turn on the light, you just need to hold down the **Fn key** combination and the **(+) sign** to increase the keyboard brightness. Conversely, if you want to decrease the brightness, press the **Fn** key

combination and **the (-) sign** . In addition, some of the company's high-end gaming laptops will have separate keyboard brightness adjustment keys.

## **Turn on Macbook keyboard light**

If you are using a Macbook, first pay attention to the symbols on the keyboard. The light symbol is usually marked on **the F5 and F6 keys**. **To turn on the Macbook keyboard light, just hold down the Fn+F6 key combination** .
