

How to turn on the flash notification when there is a call or message on Android

Flash On Call is an extremely useful application that makes it easy to identify all incoming calls or messages, even when placing your phone in silent mode or when you are away from your phone.

The flash on Android phones not only supports users to take better pictures in low light conditions, to replace flashlights, but it can also be a warning light when a call or message helps you miss any important calls. With the iOS operating system, this feature has been built into the settings. However, for Android users you have to ask for help from a 3rd party application called Flash On Call to do this.

3. How to set the ringing mode when there is an emergency with Essential Calls

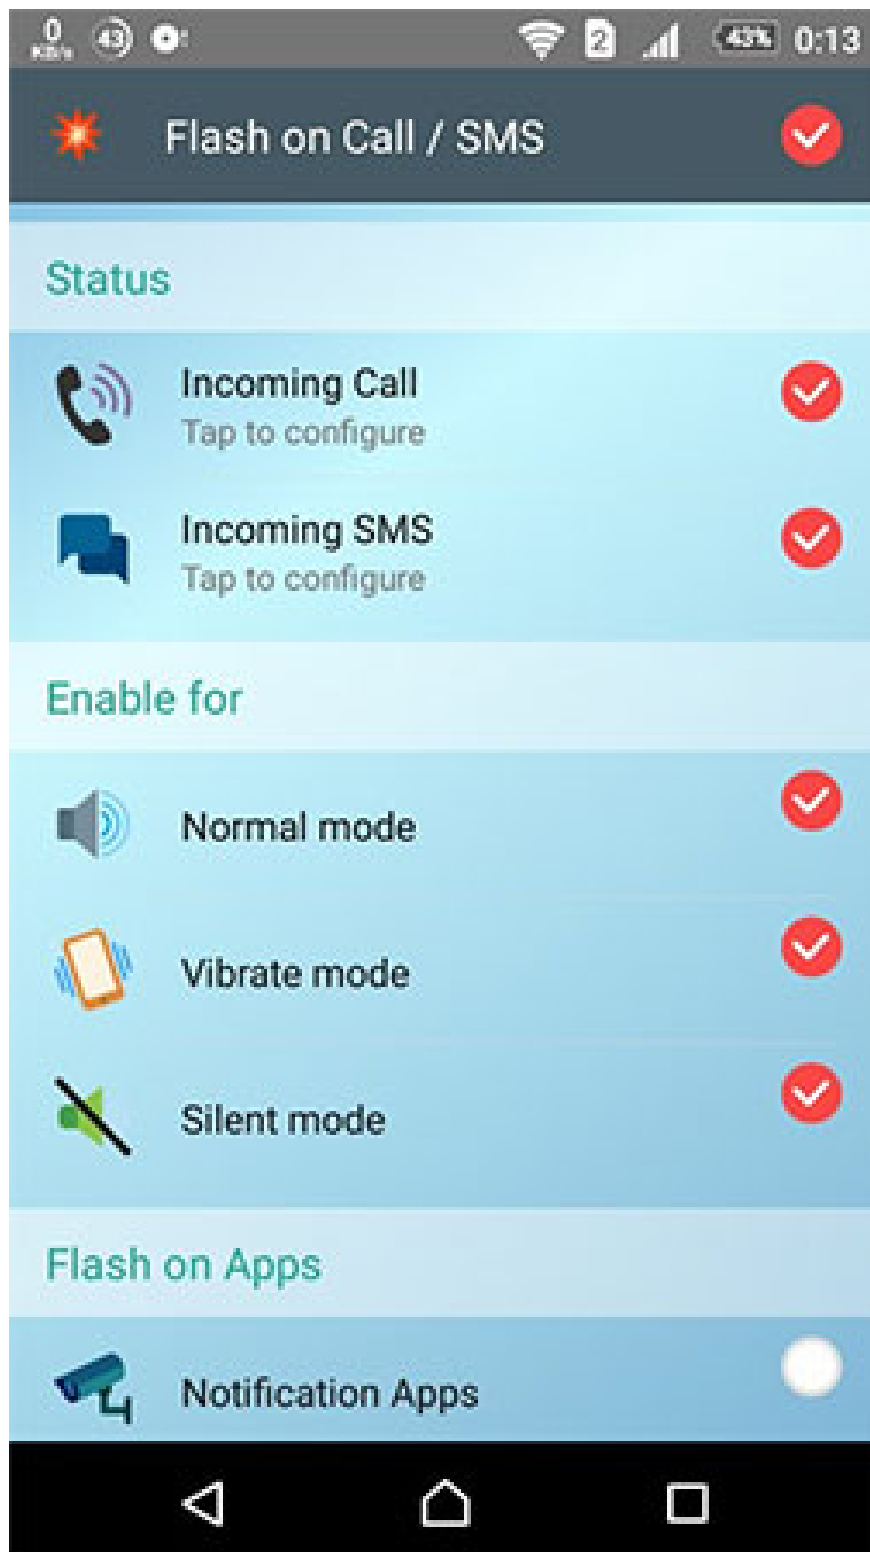

Instructions to turn on the flash to notify when there is a call or message on the Android phone

1. Download the Flash On Call app for Android

Step 1:

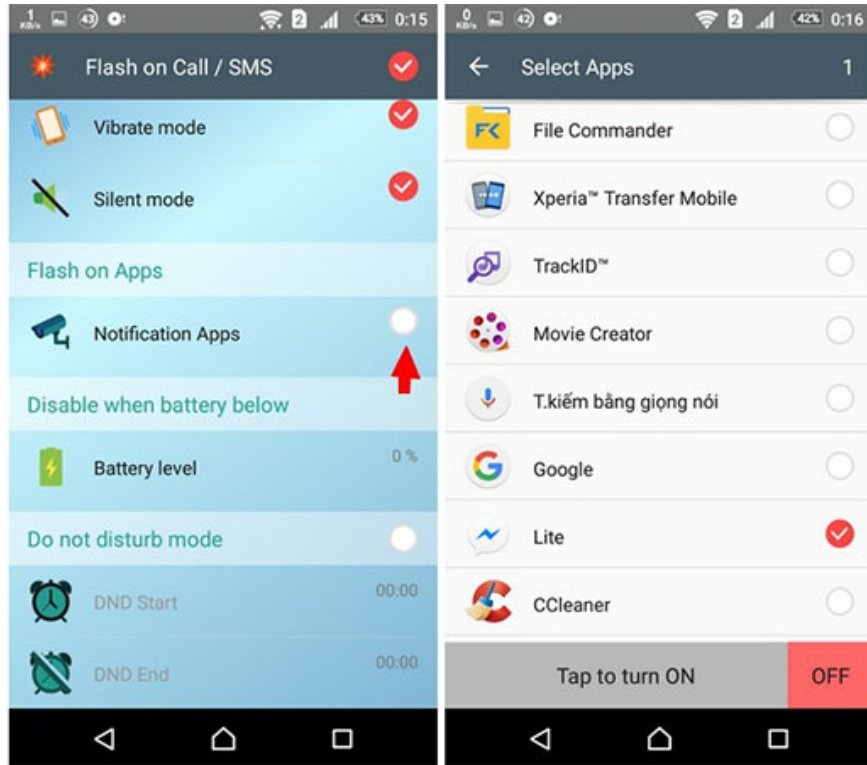

You proceed to download and install the Flash On Call application to your phone. By default after installation, the application will automatically be activated and the flash will be lit every time there is a call (**Incoming call**), incoming message (**Incoming SMS**).

Flash On Call works in all three modes: **Normal mode** (**Normal ringtone mode**), **Vibrate mode** (vibration mode) and **Silent mode** (silent mode). You can choose to turn off one of these modes if you do not want Flash On Call to activate the flash in some case.

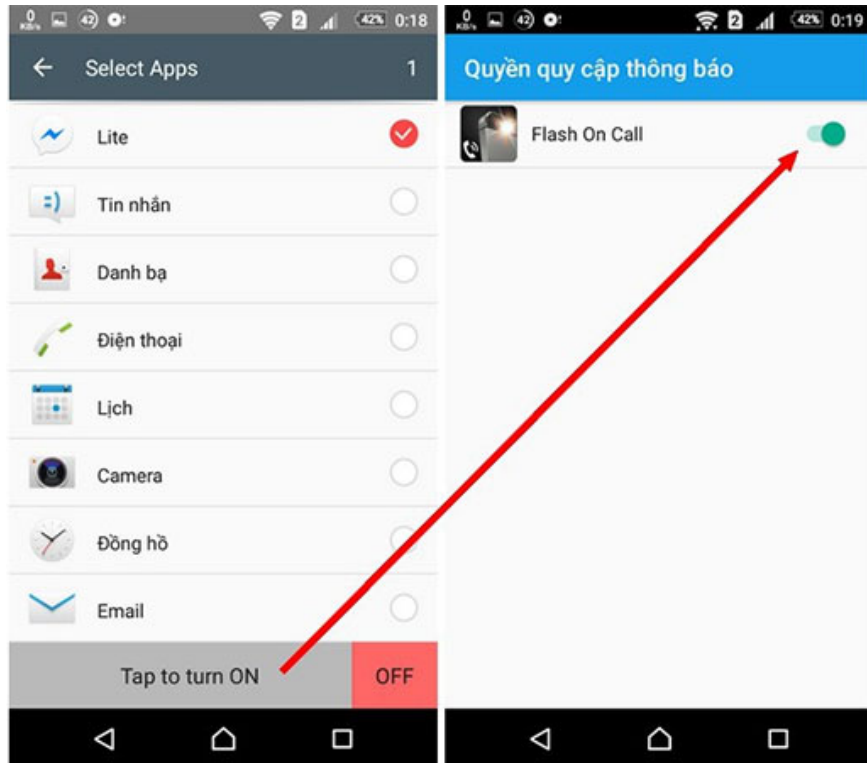

Step 2:

Set up flash light to notify when there is a new update from the app in the section **flash on app** . You just need to click the **Notification App** and select the application that wants Flash On Call to blink the light to notify (up to 10 applications). In this tutorial we will select the Messenger application, from now on whenever a new message arrives on Messenger, Flash On Call will activate the flash to notify you.

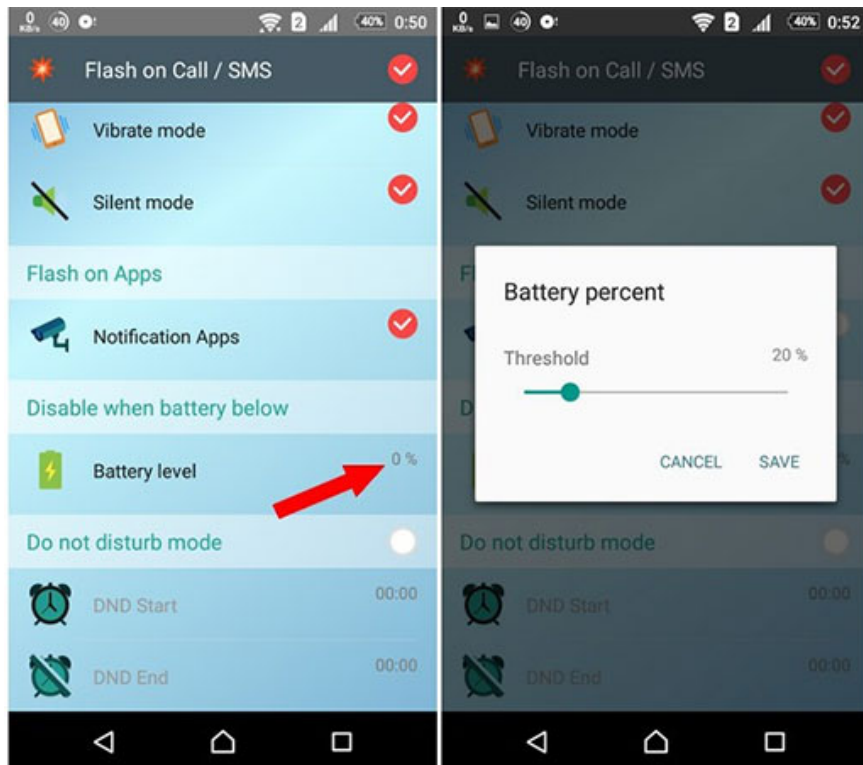

Note: In the list of selected applications interface, you must press the **Tap to turn ON** button, then activate **Flash On Call** by swiping the switch bar to the right, then this application will flash the notification when there is a notification. Come on the app you just selected.

Step 3:

You should set off the flash flashing function on Android when the phone battery is low to extend the usage time. From the main interface of the application, select the **Disable when battery below** item and select the battery life that you want the application to stop when reached.

For example, we will leave the battery level about 20%. So, in case your phone is about to run out of battery, and about 20% of the time, the flash will not blink automatically every time a call or message arrives.

Step 4:

You can check if you have turned on the flash to notify you when a call or message on Android is successful. Get another phone and try to see if the flash is flashing.

Overall, Flash On Call is an extremely useful application that makes it easy to identify all incoming calls or messages, even when the phone is in silent mode or when you are away from your phone.

Hope you are successful.
