Instructions for using Any Text to Voice Windows 10

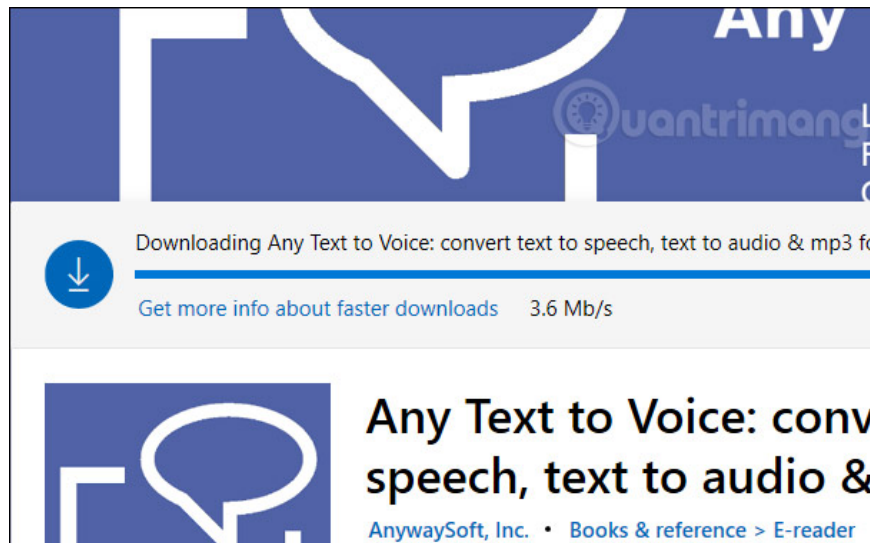

Step 1:

We download the Any Text to Voice application for Windows 10 by following the link below. Click Get to proceed to download.

1. Download the Any Text to Voice application

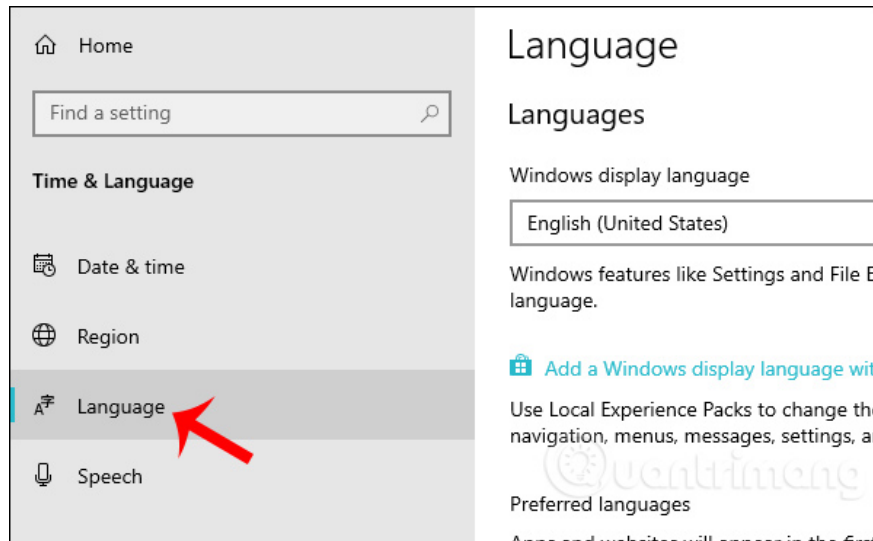

Wait for the installation process to finish we launch the application.

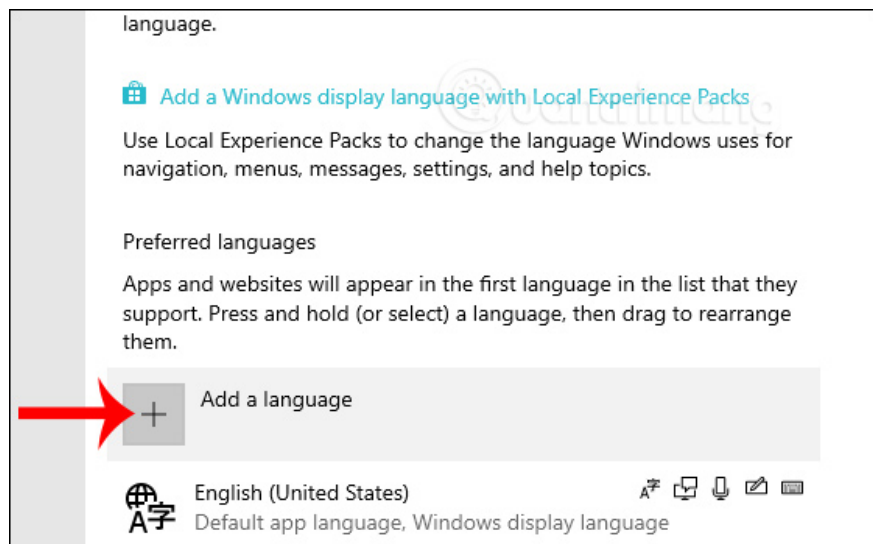

Step 2:

Next, users need to **install additional languages ??on the system** for Any Text to Voice to recognize that language. We press **Windows + I** and select **Time & Language** .

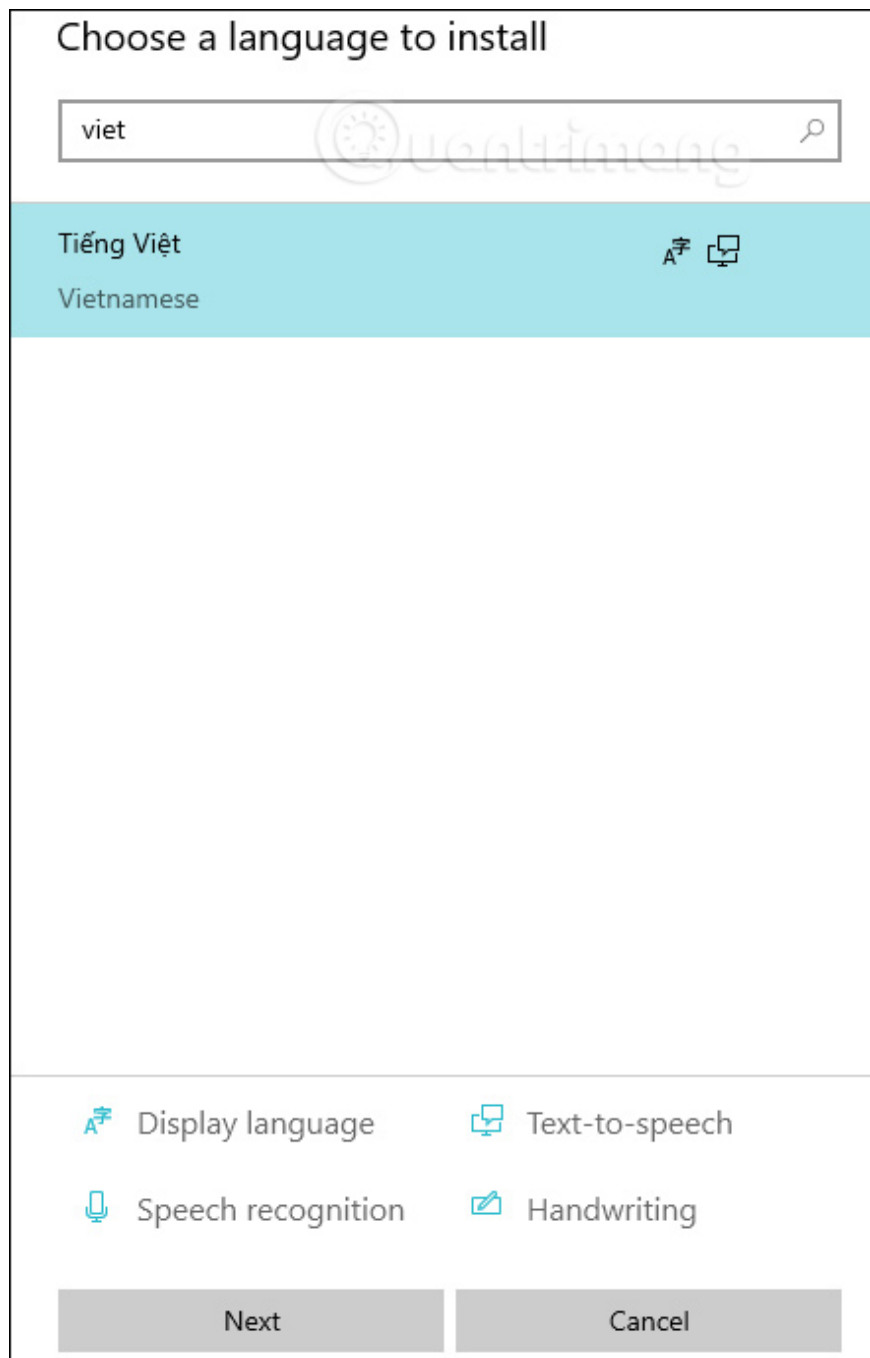

Switch to the new user interface, click **Language** to change the settings for computer language.

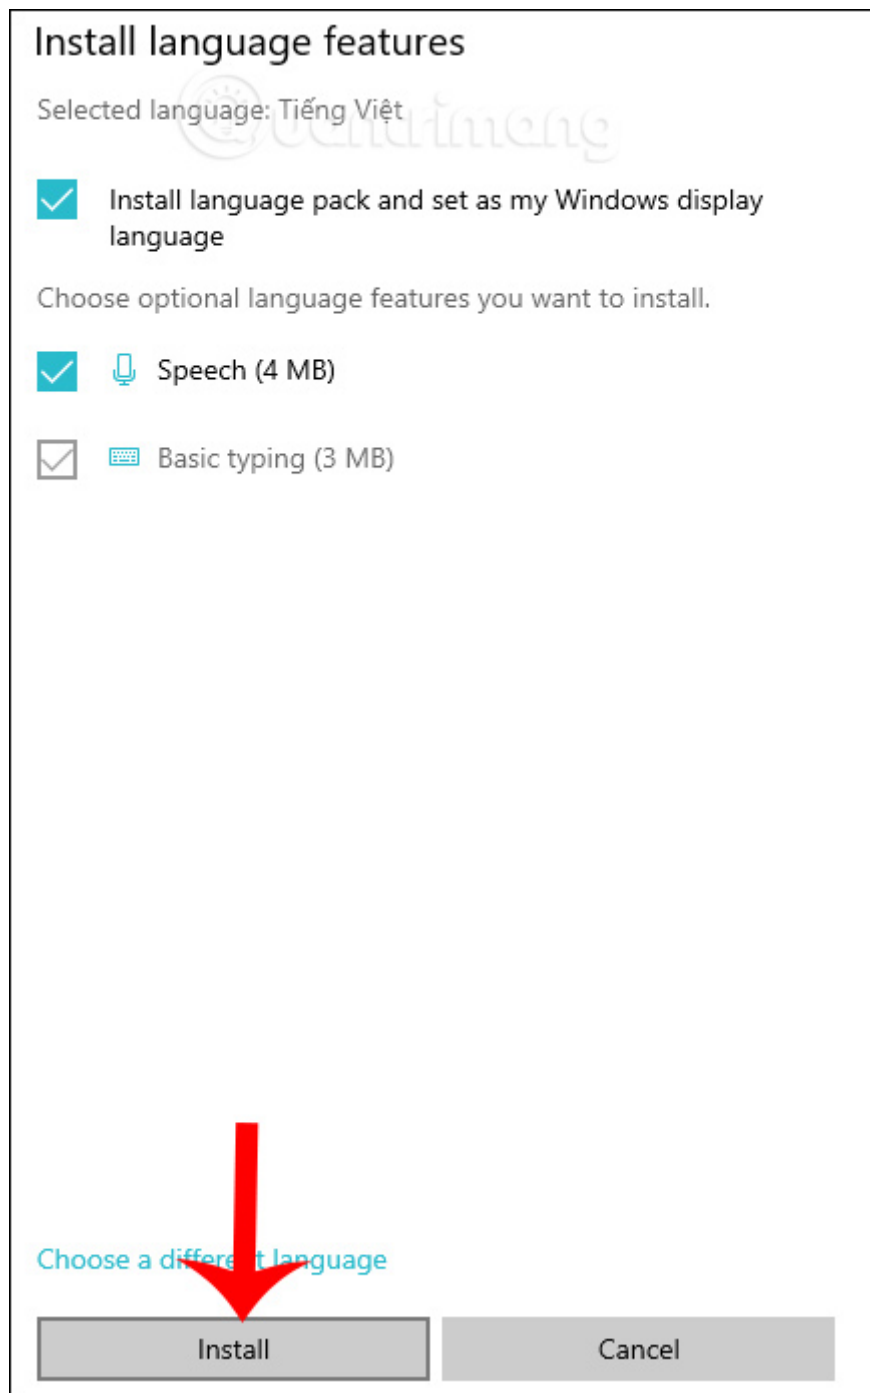

Continue to look to the right, click **Add a language** to add a new language for the computer system.

In this interface, you enter **Vietnamese keyword** and will see the results below. Click and then click **Next** to continue.

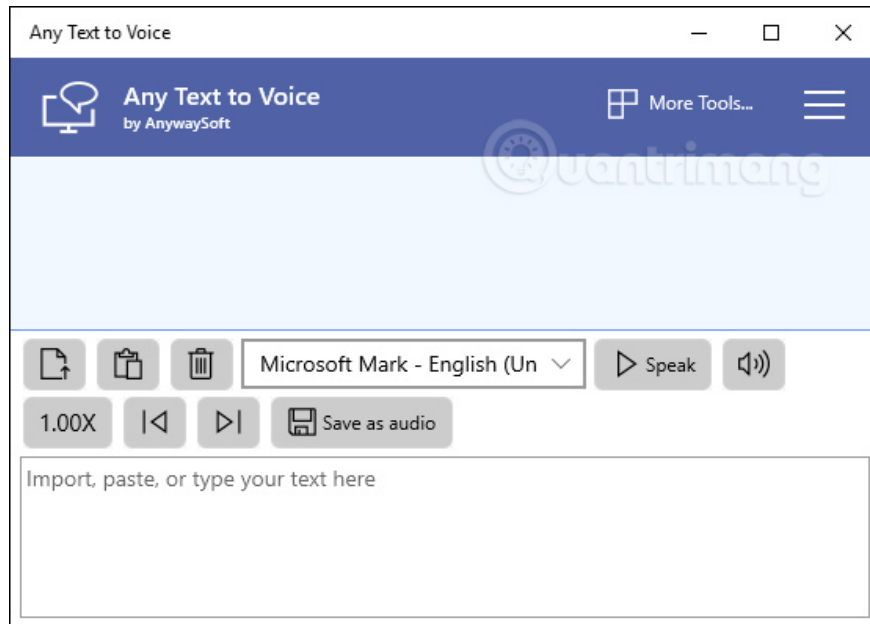

Finally **click Install** and wait for the language installation process to complete.

Step 3:

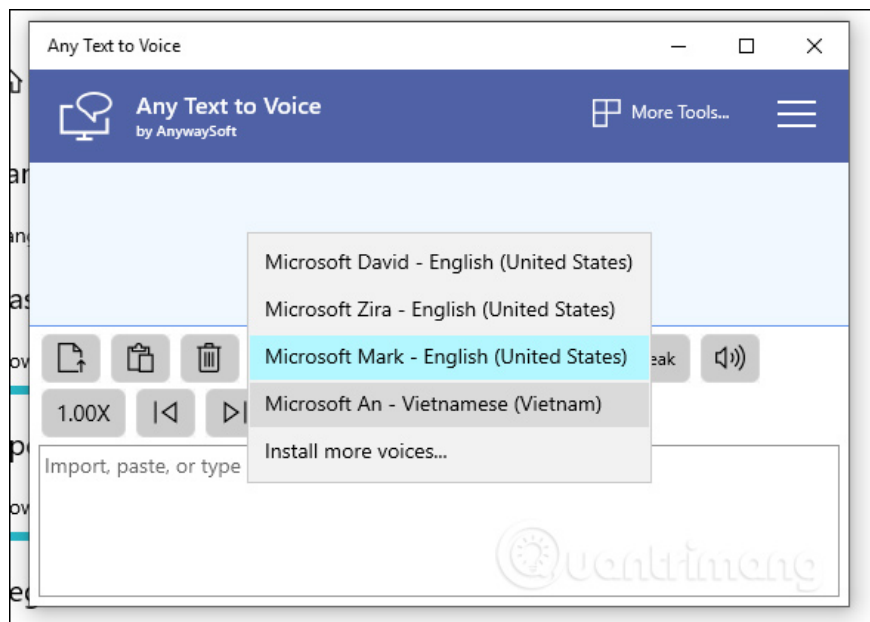

In the interface of the application we will see many options for uploading content.

1. Load text from file: Import documents from supported text files including docx, doc, rtf, html, epub, mobi, txt.
2. Paste from clipboard: Enter the content cached.
3. Enter text directly into the application's white frame.

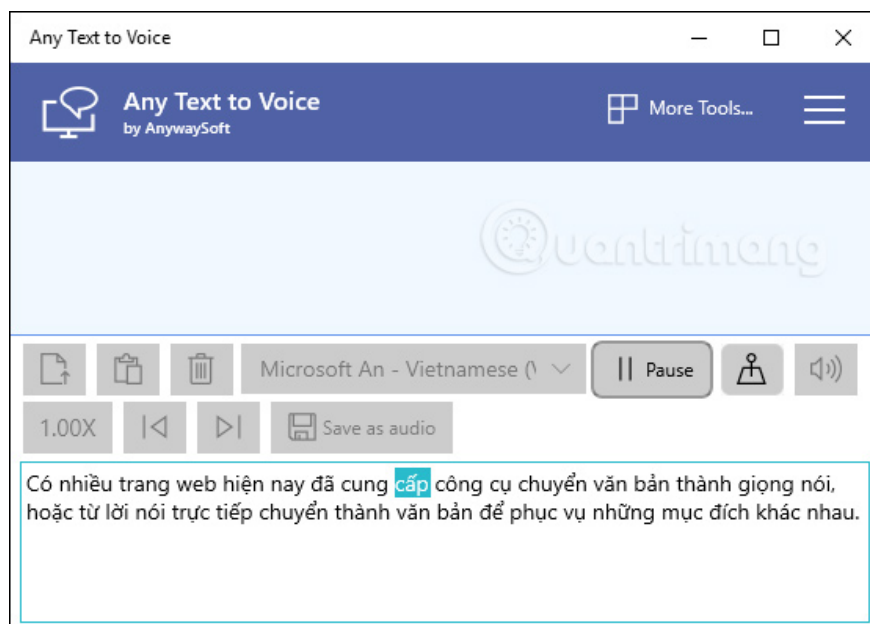

Step 4:

Next, the user **selects the language that the application wants to turn into a voice**. Here we will choose Vietnamese.

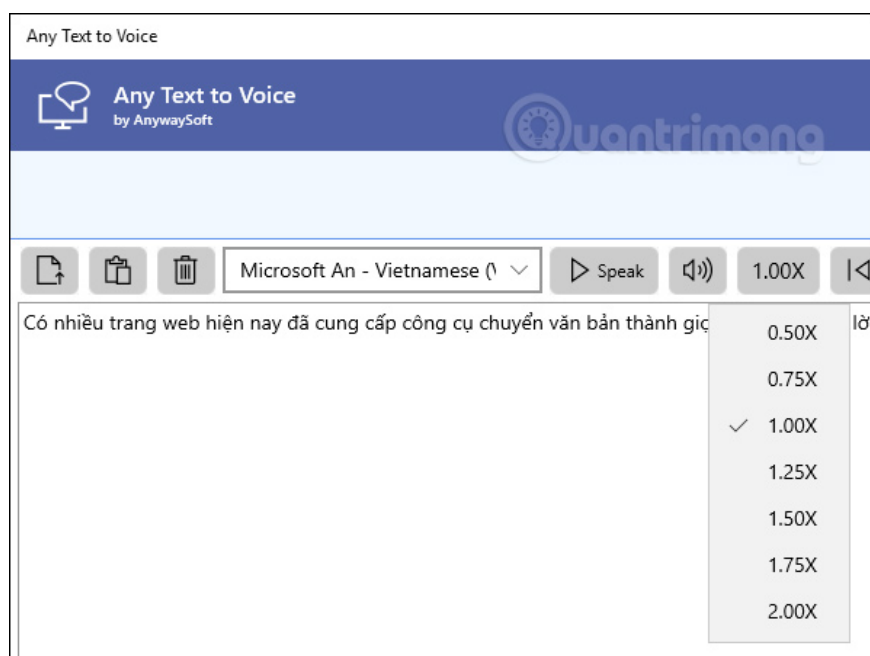

After content is available, press **the Speak button** for the app to read the content. The content is read one after another and the word flashes green when it reaches the correct position. Press Pause to pause reading.

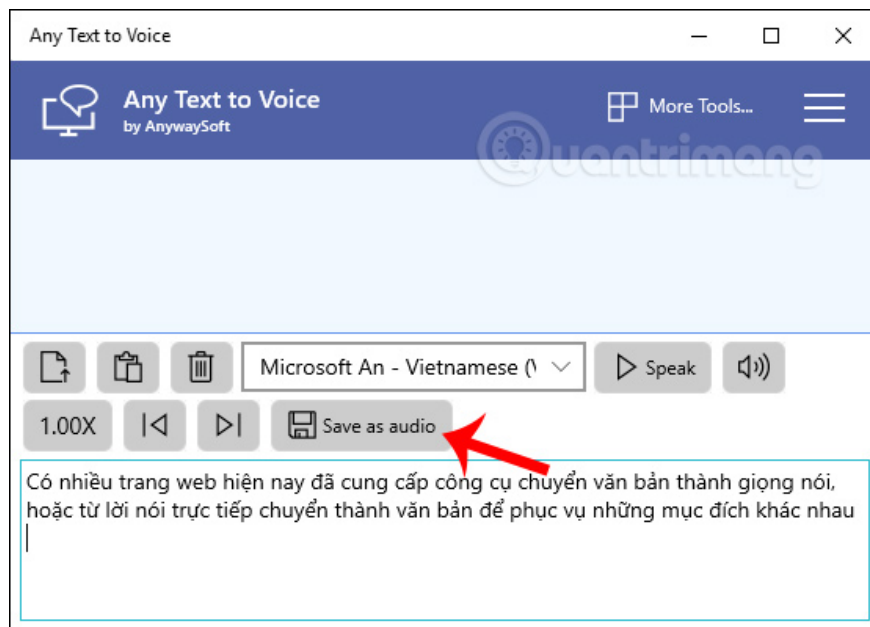

Step 5:

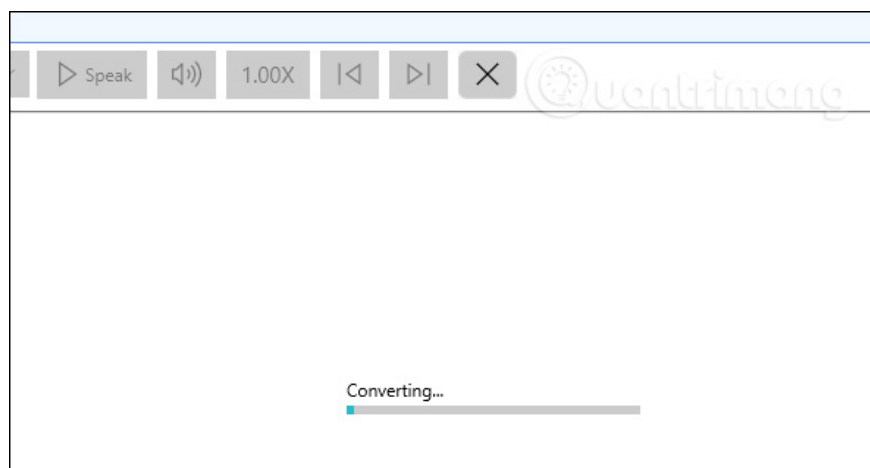

Also in the document reading frame you have the option of changing **the reading speed of the document** or the volume of the voice.

If you want to download the audio file, **click Save as audio** .

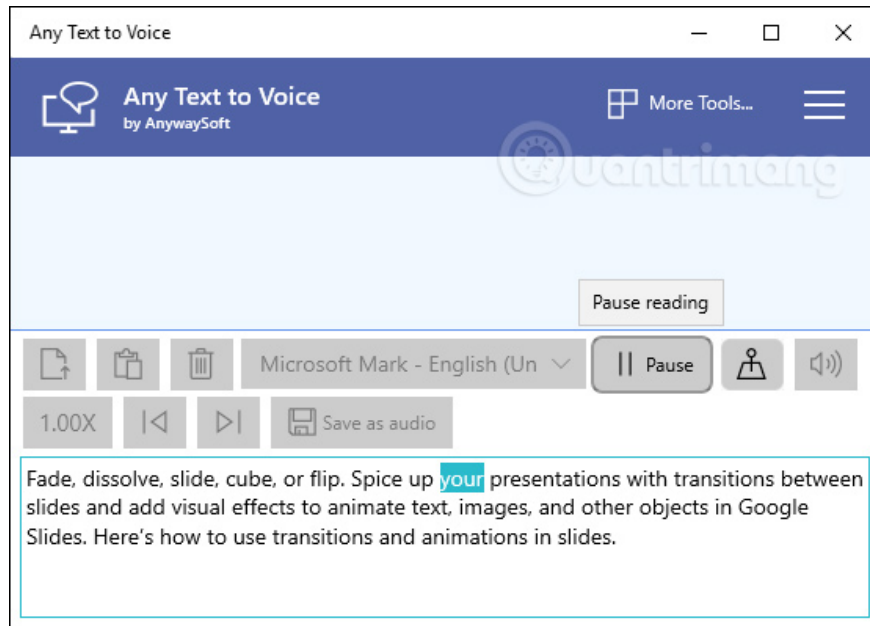

Immediately after that the conversion process is carried out to convert the sounds into separate files.

When the conversion is complete, the user will get the address of the mp3 audio file storage folder as shown below. Click Open File to hear the audio file immediately.

For other languages, Any Text to Voice works very well.

Any Text to Voice gives users the tools to convert text into voice efficiently and accurately. Any Text to Voice identifies the language thanks to the language that Windows 10 installs and the type of language you choose in the application.

I wish you successful implementation!
