

How to Uninstall Norton 360 2013 (Beta)

The following steps apply to users that installed or registered Norton 360 2013 (BETA) for Microsoft® Windows® Operating System. And it's recommended that you backup and save your personal setting file for it (TIP: Run the 'Backup S...

Method 1 of 3:

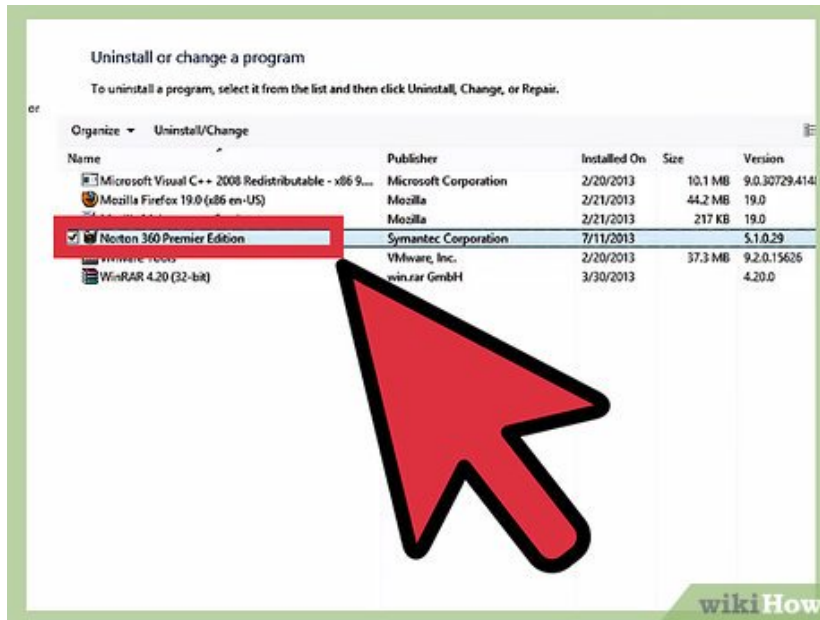

Instruction One

What's Important: Logged on as an administrator, make sure that you've saved and closed other personal file(s) and/or Windows program(s), you then run the "Uninstall Norton 360" on the Start menu of Windows 7/Vista/XP SP3.

Click the Start button, select All Programs (or Programs for other earlier editions of Windows)

2.

Open up Norton 360 entry on the currently installed program list; scroll down and launch the "Uninstall Norton 360" application in it.

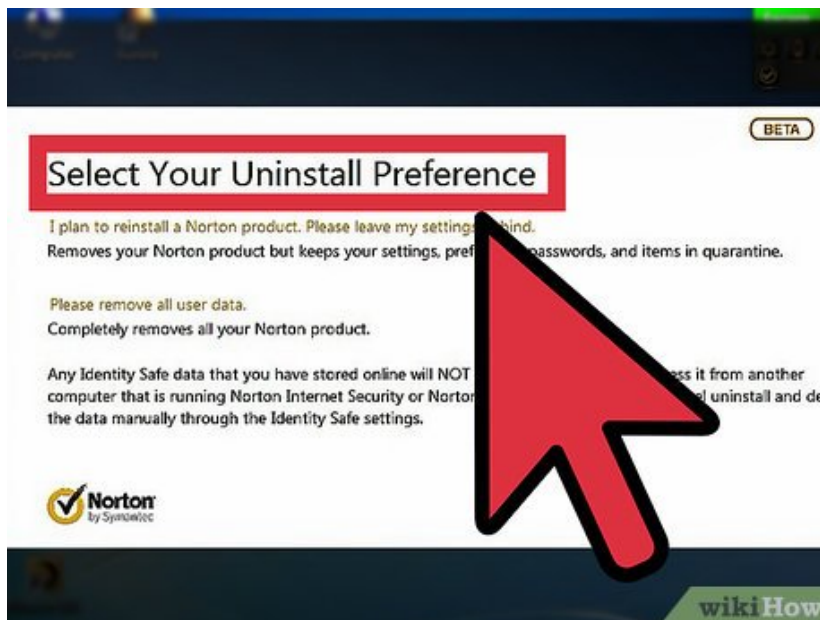

3.

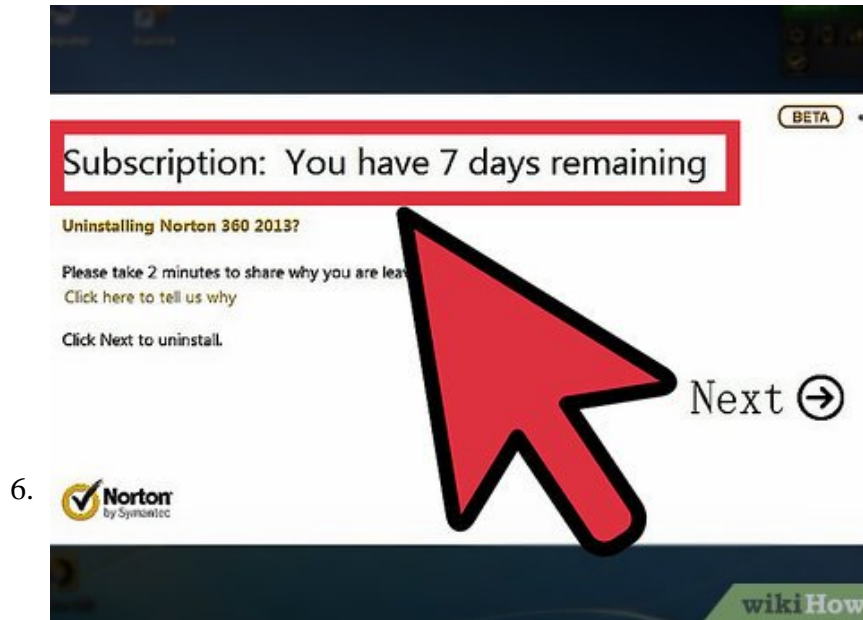

Select Yes option for UAC (if you're running a Windows 7 machine.)

Click the Next button on "Thank you!" window.

Understanding your needs for computer security, select one of the TWO uninstall options listed by using a single click on it.

Click Next button on "Subscription" information box.

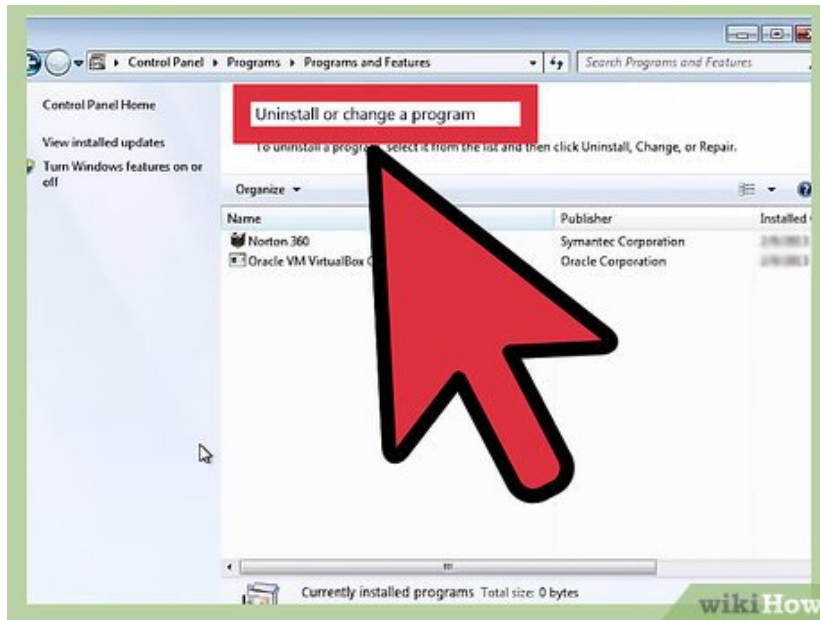

Please wait and then, reboot your device clicking "Restart Now" button.

Method 2 of 3:

Instruction Two

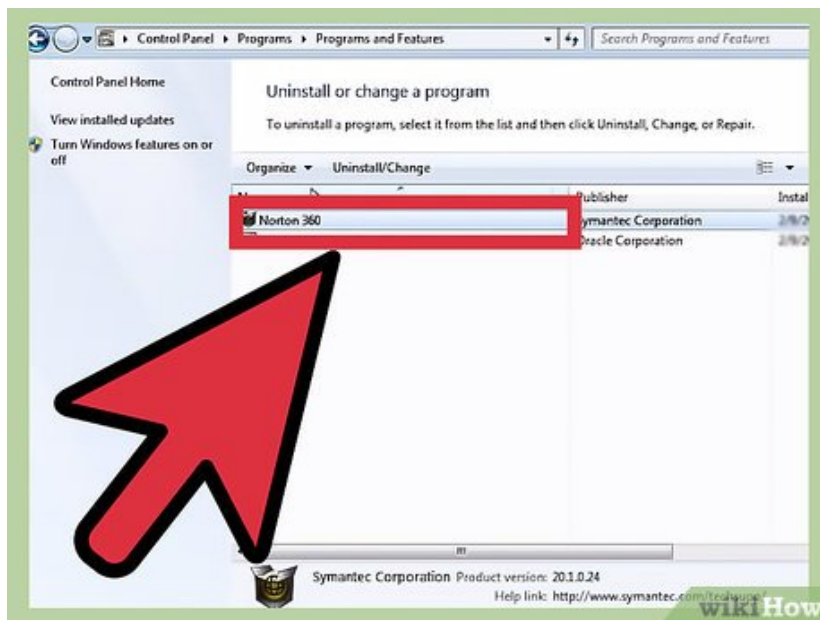

Similarly & typically, you can review some steps above to automatically remove Norton 360 2013 (BETA)/version 6.0/version 5.0.

1.

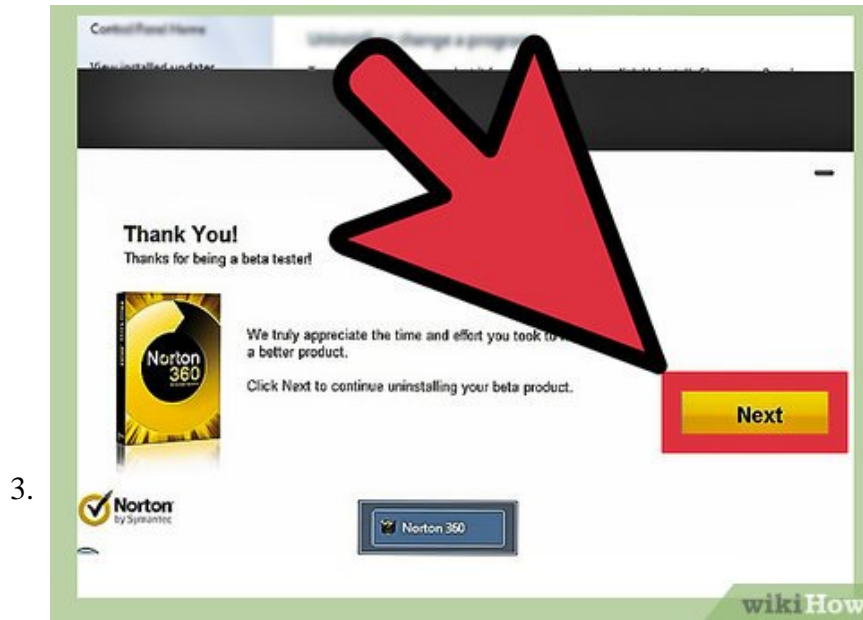

Start > (Settings) > Control Panel > Programs - Uninstall a program; or Add or Remove Programs.

2.

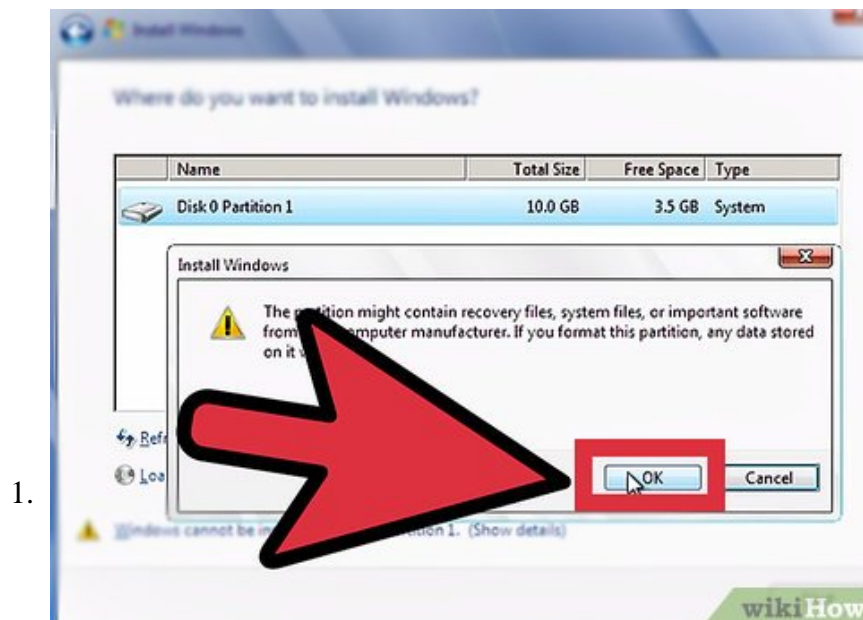

Launch Norton 360 program listed (by: 1) clicking on it, running the "Uninstall/Change" option on the top of program list; 2) right-clicking on it, selecting "Uninstall/Change" on the right menu; 3) running it directly).

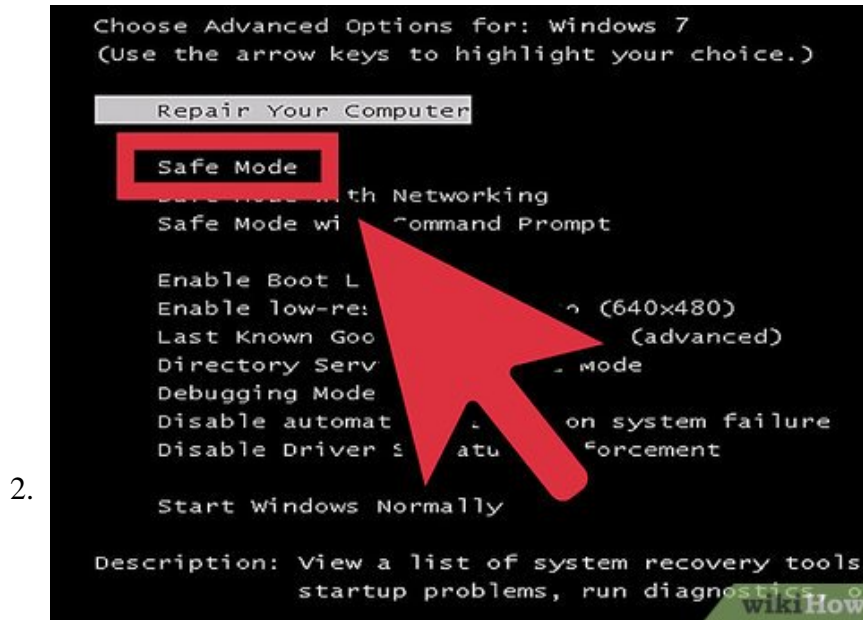

Review or follow the on-screen automatic procedure.

Method 3 of 3:

Related Remnants Troubleshooting Guidelines

Take a newest clean backup for your Windows system, including Registry Editor.

You may manually search for Norton 360 leftover files and registry keys and then, delete them you would find; moreover, you may need to clean them in Windows Safe Mode.
