

How to uninstall the iOS application is not displayed on the Home Screen screen

Suppose if there are many applications that you want to uninstall, but you can't find the application on the Home Screen screen. If the application icon does not appear, and you do not know how to uninstall the application, please refer to the following article of Network Administrator.

Suppose if there are many applications that you want to uninstall, but you can't find the application on the Home Screen screen. If the application icon does not appear, and you do not know how to uninstall the application, please refer to the following article of Network Administrator.

Normally to uninstall a certain iOS application, press and hold the application icon until the **X** sign icon appears on the application, then click **X** to remove the application.

There are a few points to note that after upgrading to iOS 10 Beta, some users reflect that their application does not update (update). Although the App Store displays an icon to inform users that the application needs to be updated, the application is not updated.

If you encounter the same problem, you can apply some of the following solutions:

- Forced to exit the App Store application: to do this, press twice on **the Home button** , then swipe the App Store application card and try to open the App Store application again.
- Use Spotlight Search to find apps on Home Screen home screen and Home Screen pages.
- Press **the Power button + Home button** to Hard reset your phone. This is not Factory reset, but just reboot your device, just like restarting your computer.
- Uninstall applications via iTunes. To do this, use a USB cable to connect your iOS device to the computer, then click your device icon under the bar menu. Next select **Apps** under **Settings** and find the application you want to uninstall in the list of applications in the right pane.

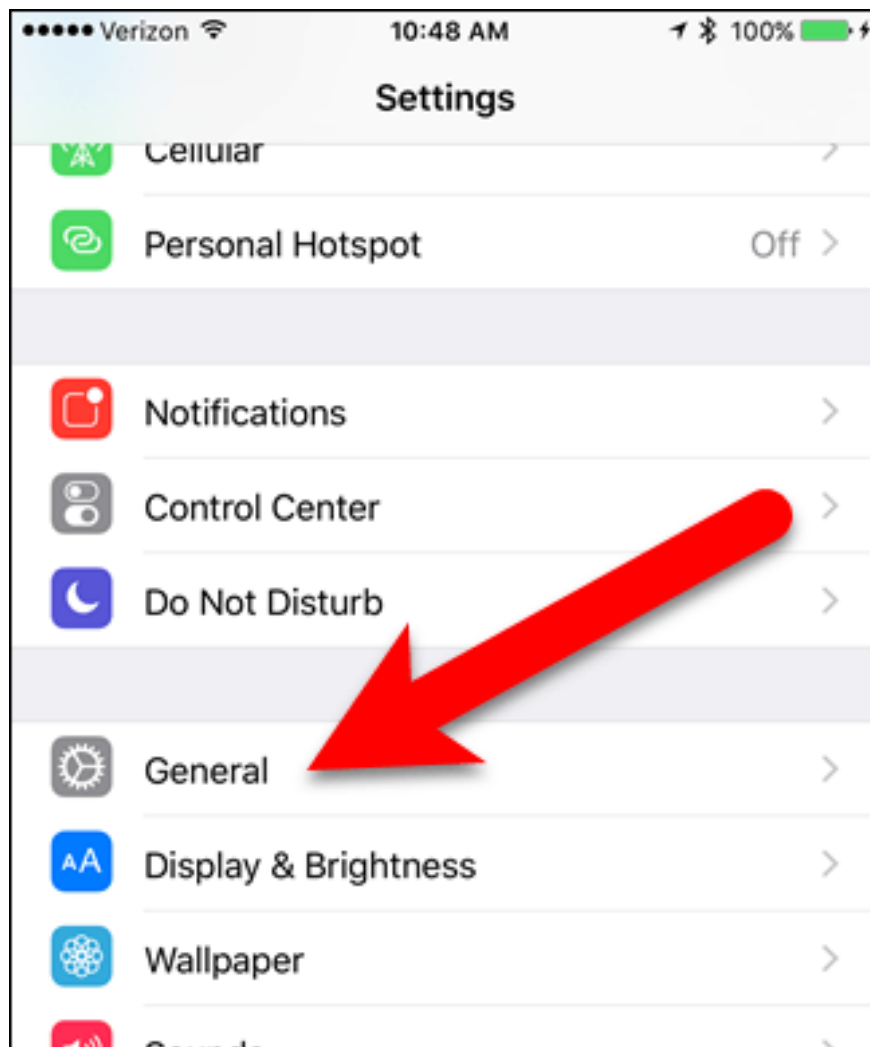

Click **Remove** to remove the application. If a confirmation dialog box appears, click OK then click Apply at the bottom of the window to apply the change. Your device will sync with iTunes and the application will be deleted from the device.

However, if iTunes does not work on iOS 10 Beta, you can apply the following steps:

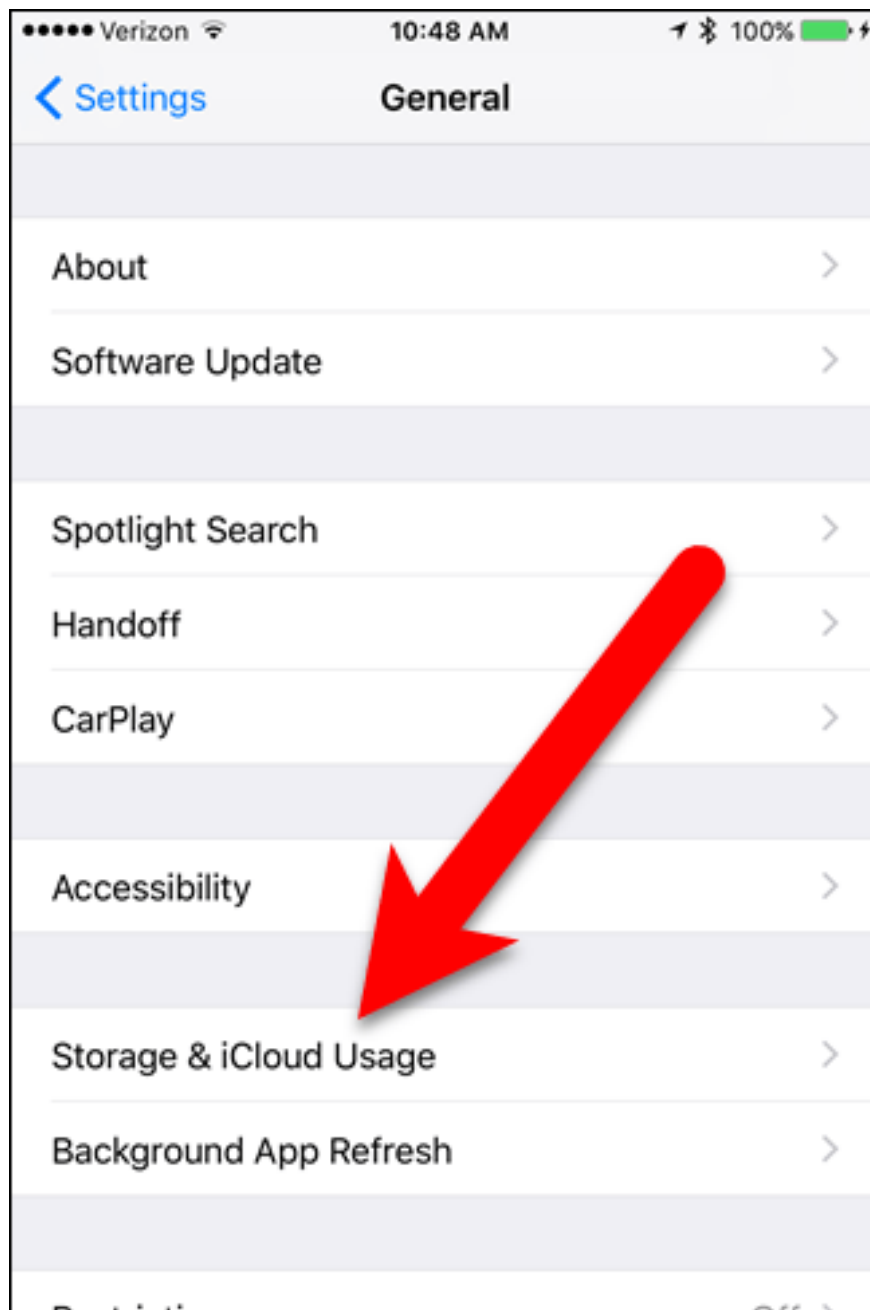

First click to open the **Setting** s application (installed) on the Home Screen screen.

On the Settings screen, click **General** .

Next scroll down to find and click **Storage & iCloud Usage**.

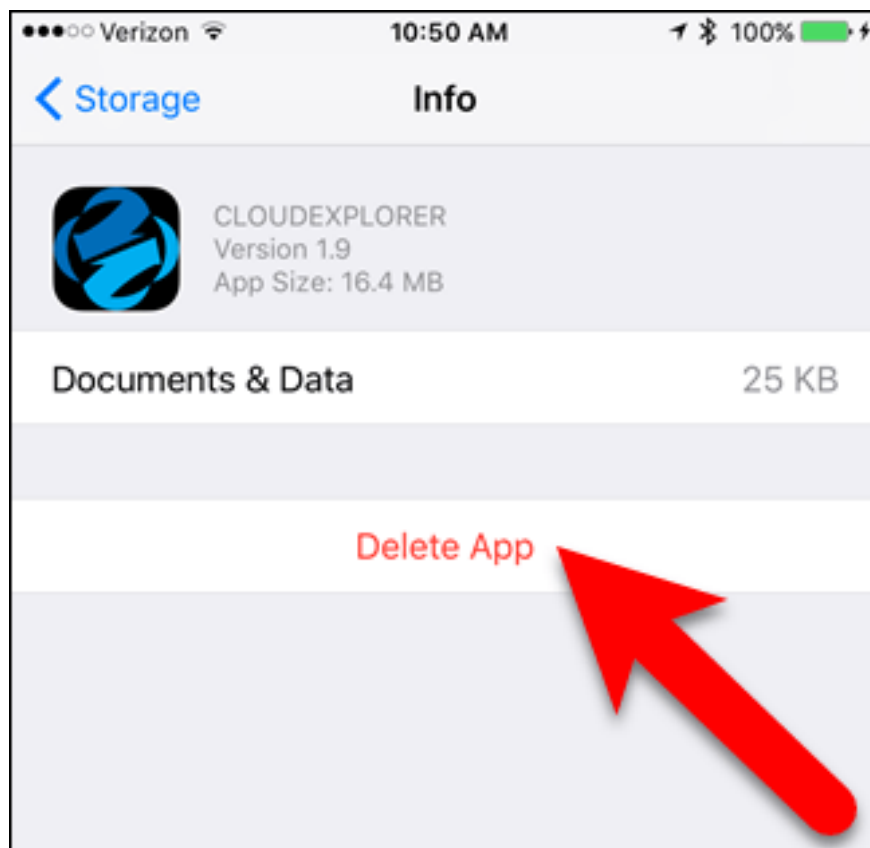

On the Storage & iCloud Usage window, find and click **Manage Storage** at the **Storage** item .

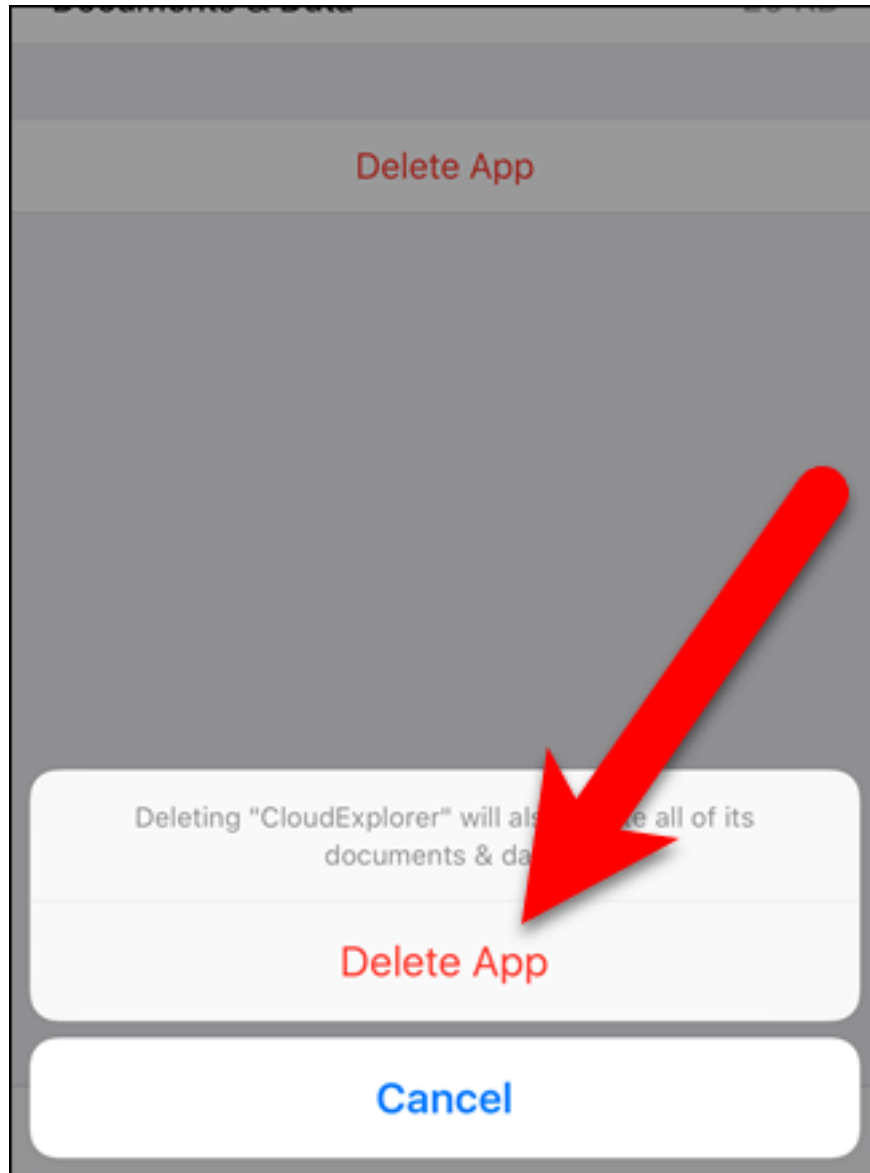

This time the screen will display a list of all applications installed on your device, the app is sorted in size order. Scroll down here to find and click the application you want to remove.

On the Info screen, click **Delete App**.

At this time, the popup window appears, where you click **Delete App** to remove the application.
