Every time an iTunes update is released, Apple will add exciting new features, fix critical bugs, and further support iPhone, iPad and other devices using iTunes. Therefore, you should update the new version as soon as possible. The iTunes update process is quite simple. Along TipsMake.com learn through the following article offline.

Every time an iTunes update is released, Apple will add exciting new features, fix critical bugs, and further support iPhone, iPad and other devices using iTunes. Therefore, you should update iTunes to the new version as soon as possible. The iTunes update process is quite simple. Along TipsMake.com learn through the following article offline.

Start updating your iTunes

Follow the prompt to 'upgrade iTunes'

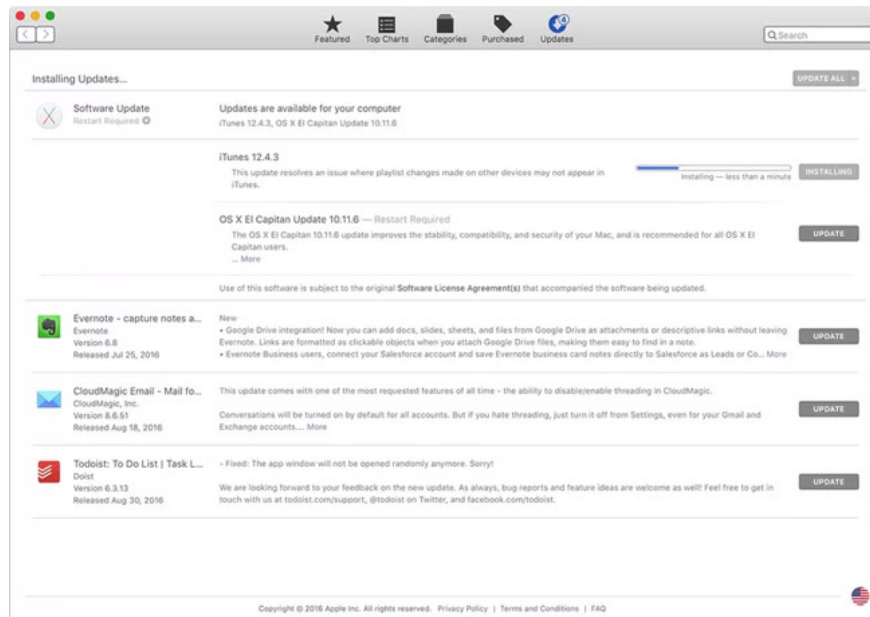

The easiest way to upgrade iTunes almost doesn't require you to do anything. Is because iTunes automatically notifies you when a new version is released. In that case, a notification window about the upgrade will appear when you launch iTunes. If you see that window and want to upgrade, just follow the on-screen instructions.

If that window does not appear, you can start updating manually by following the steps below.

Downgrade iTunes

New versions of iTunes are almost always better than previous versions - but not all versions are and not for all users. If you have upgraded iTunes and don't like it, you can go back to the previous version.

Update iTunes to the latest version on Mac

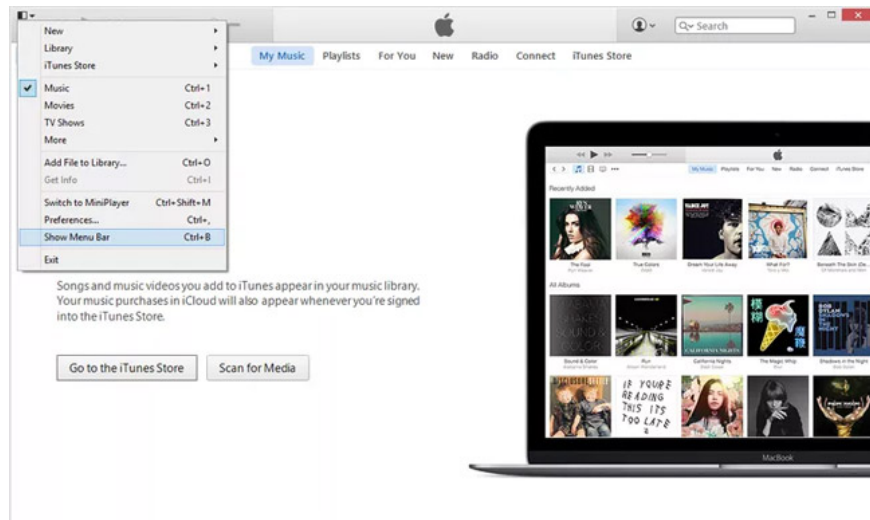

On Mac, you update iTunes with the Mac App Store program built into macOS on all Mac OS devices. In fact, updates to all Apple software (and some third party tools) are also done with this program. Here's how to update iTunes on Mac:

1. If you have opened iTunes, continue to step 2. If not, go to step 4.
2. Click the iTunes menu and then click **Check for Updates**.
3. In the pop-up window, click **Download iTunes**. Move to step 6.
4. Click the Apple menu in the upper left corner of the screen.
5. Click the **App Store**.
6. The App Store program opens and automatically switches to the **Updates** tab, which displays all available updates. You may not see the iTunes update immediately. This update may be hidden with other macOS updates in the **Software Updates** section at the top. Expand that section by clicking **More**.
7. Click the **Update** button next to the iTunes update.
8. After that, the App Store program will download and automatically install a new version of iTunes for your device.
9. When the update is complete, it will disappear from the top section and appear under **Updates Installed in the Last 30 Days** section at the bottom of the screen.
10. Launch iTunes and you will be using the latest version.

You can refer to how to create new Apple ID on Mac using iTunes.

Upgrade to the latest version of iTunes on a Windows-based computer

Download iTunes

When you install iTunes on your computer, you also install the **Apple Software Update** program. This is what you use to update iTunes. When updating iTunes, you should ensure that you have the latest software update from Apple Software Update. Doing so can help you avoid problems that arise during the update process. To update the latest Apple Software Update software, follow these instructions:

1. Click the **Start** menu.
2. Click **All Apps** .
3. Click **Apple Software Update** .
4. When launched, the program checks to see if any updates are available for your computer. If one of these updates is available for **Apple Software Update** , uncheck all but the **Apple Software Update option** .
5. Click **Install** .

Once the update has been downloaded and installed, Apple Software Update will run again and give you a list of new programs available for updates. Now it's time to update iTunes:

1. In **Apple Software Update** , make sure that you have selected the iTunes update. (You can also update any other Apple software you want at once, just select the software you want to update.)
2. Click **Install** .
3. Follow any prompts or menus that appear on the screen to complete the installation process. When finished, you can launch iTunes and use the latest version.

Alternative version: From in iTunes

There is also a simpler way to update iTunes.

1. In iTunes, click the **Help** menu.
2. Click **Check for Updates** .
3. Continue to follow the instructions above.

If you don't see the menu bar in iTunes, it may be hidden. Click the icon in the top left corner of the iTunes window, then click **Show Menu Bar** to display it.
