

# How to upgrade to the latest Windows 10, Update Win!

The trick to upgrade to the latest Windows 10 version is 100% successful. Instructions on how to Upgrade Win 10 to the latest version in 4 simple and effective ways

There are a lot of you commenting and emailing yourself with the content of how to upgrade to the latest version of Windows 10 safely and quickly.

Yes ! Actually, through a few sentences, it will certainly make it difficult for newbers to dabble in real computers, so I decided to write a detailed tutorial for you to be able to this problem solved.

Those who are having difficulty in the upgrade process, please refer to this article, 100% successful.

There are actually many ways to help you upgrade to the latest version of Windows 10 successfully 100%, but in the framework of this article I will guide you the simplest and most effective ways you should use.

## I. How to upgrade Windows 10 to the latest version

In this tutorial I will share with you 5 ways to upgrade from Windows 7, 8, 8.1 and Windows 10 to the latest version of Windows 10. You can read through it once and see which way is right for you, then follow!

### **#first. Upgrading through the Windows Update feature included with Windows**

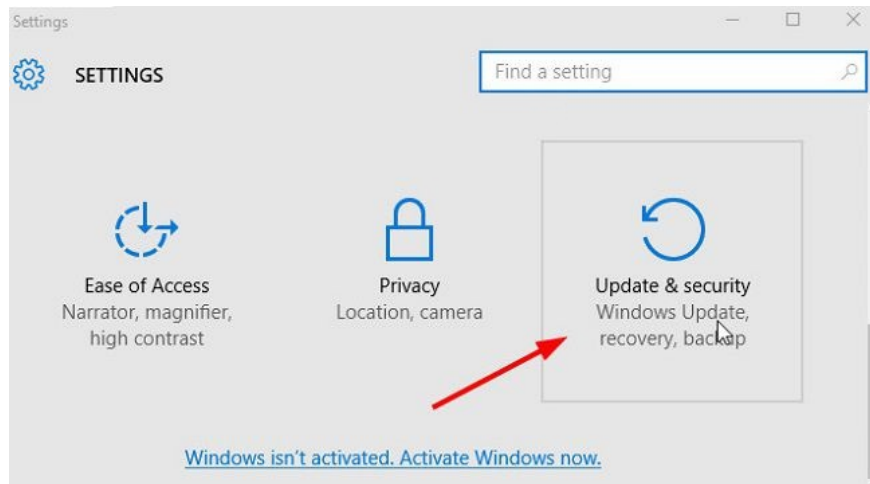

This is a traditional way from Windows XP, you can use the Windows Update feature built into Windows to do this simply.

If it is minor updates then you should upgrade this way, as it is quite safe and does not take much work.

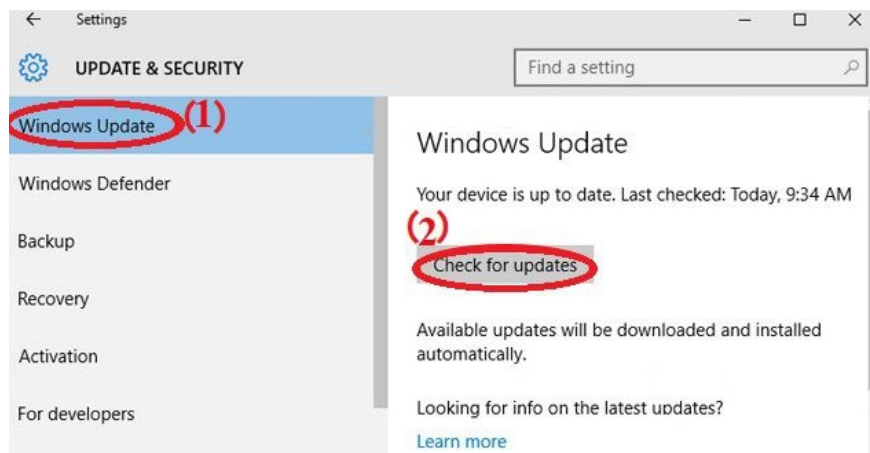

Perform:

Note: The computer requires an internet connection.

+ Step 1: Click the Start button => select Settings => a window appears, choose Update & security.

+ Step 2: A new window appears, choose Windows Update => and click Check for updates to let Windows find the latest update.

+ Step 3: Wait . . Yes, your job is just that simple, the rest let the operating system take care of note.

Windows will download the Update and install it on your computer automatically. However, the downside of this approach is quite time consuming because the download speed is slow. However, this is still a good way.

## #2. Upgrade Win 10 with the Media Creation Tool

Some of the bad cases are that the computer cannot find the update through the Windows Update window, then you can use this to upgrade quickly and efficiently.

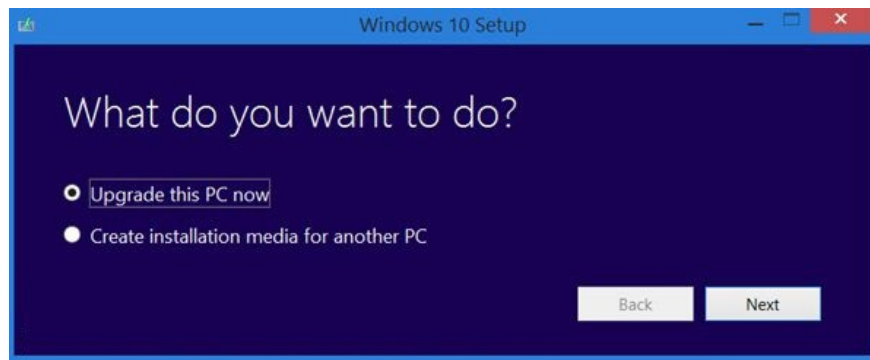

Perform:

+ Step 1: First, please visit [this address](#) or [this address](#).

+ Step 2: After you have downloaded Microsoft's Media Creation Tool, right-click and select Run as administrator to run as administrator.

Now click Upgrade this PC now => click Next to start the upgrade.

Note: Alternatively, you can choose Create installation media for another PC to create a Windows installation USB or burn a CD.

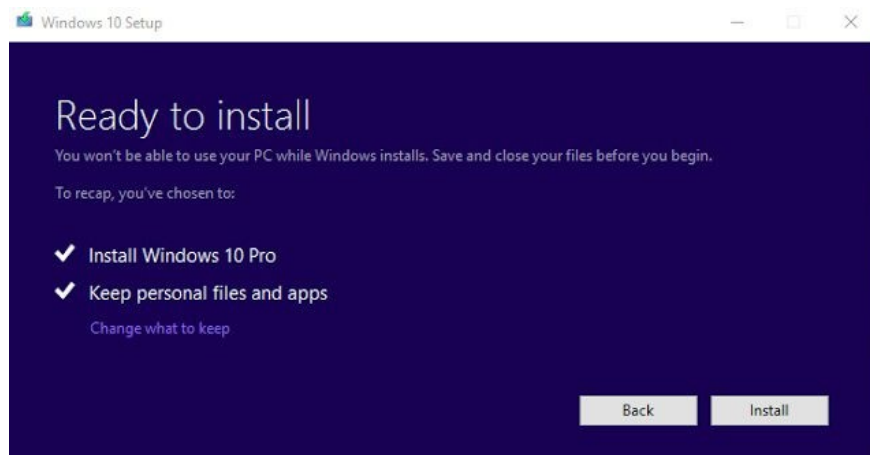

+ Step 3: Click Accept to agree to the terms.

Yes ! In the next window, click the Install button to begin the installation.

But in this window you need to note that you must display two lines as shown below, the line 'Install Windows 10 Pro' and 'Keep personal files and apps'.

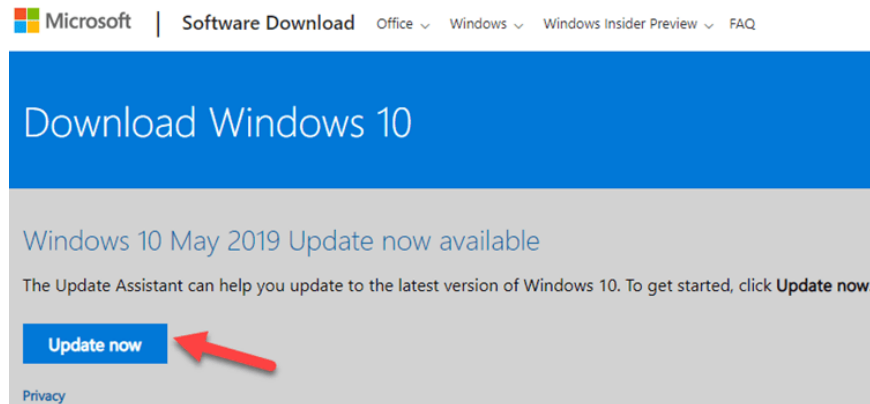

### # 3. Upgrade Win 10 to the Best Version using Windows 10 Update Assistant tool

This way is also very simple, please follow the instructions as follows:

Perform:

+ Step 1: First, please access [this address](#) . => then click on the Update Now button as shown below.

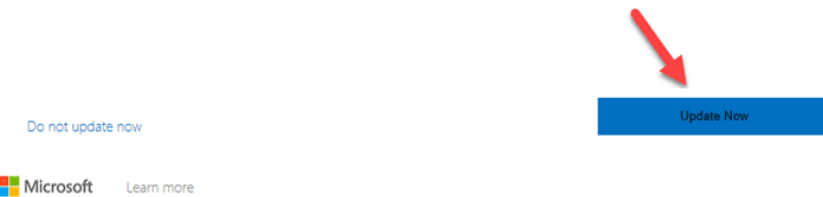

+ Step 2: Now there will be a file downloaded => after the download is complete, double-click on the file to start running the upgrade file.

A new window appears, click the Update Now button to start the upgrade process.

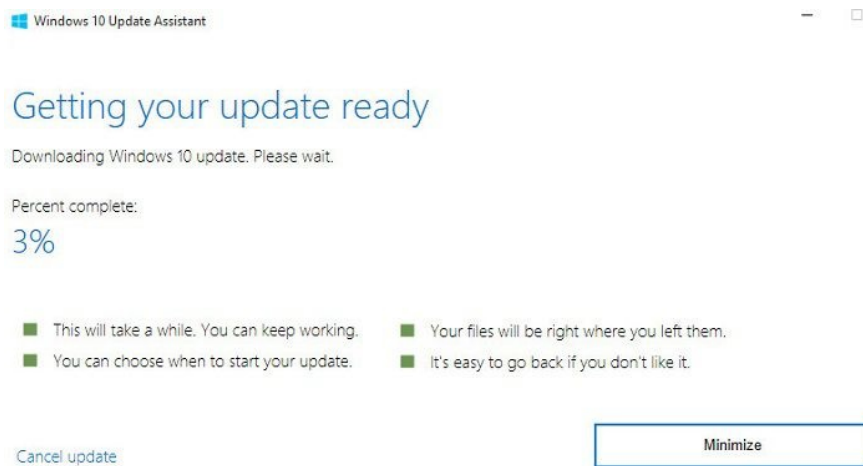

## Update to the latest version of Windows 10

One of the best features of Windows 10 is that it keeps getting better with every update. This PC is currently not running the latest and most secure version of Windows 10. This PC is running version 1809. The latest version is 1903.

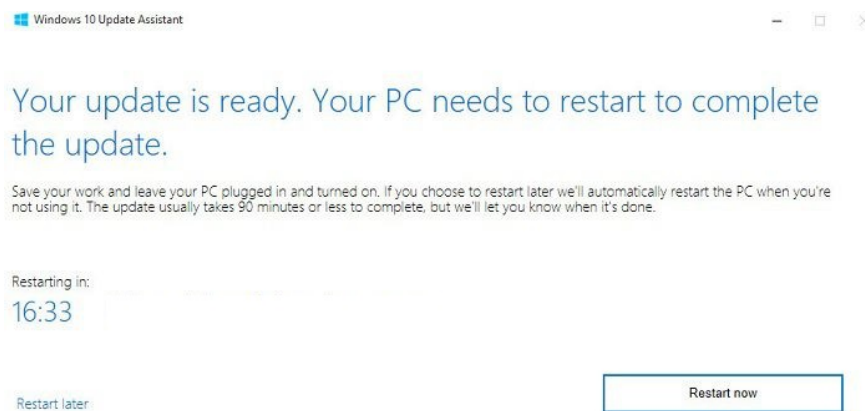

We can help you get the latest security enhancements and feature improvements. Click 'Update Now' to get started.

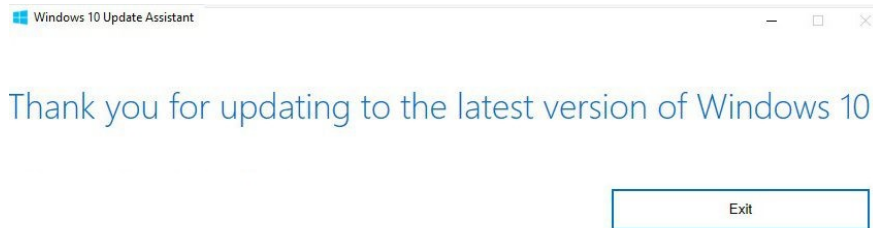

+ Step 3: In the next window, Windows 10 Update Assistant starts checking the current Windows version on your computer. And the upgrade will begin, please wait until it is completed.

+ Step 4: Okey, after the upgrade is completed, the operating system will ask to restart the computer to complete, click Restart now to perform immediately.

The notification window for Upgrade Success.

+ Step 5: Yes, after entering Windows 10, you can check that the current Win version has been upgraded by opening the Run dialog (Windows + R) => enter the command winver to see information. .

This is an image from the previous version, I was afraid to take it again, so I still keep it

Note: You note one thing is that during the upgrade process, but the black screen, you quickly press the key combination Windows + E to display the screen again. This will avoid the black screen error after upgrading to 1607. Remember, guys!

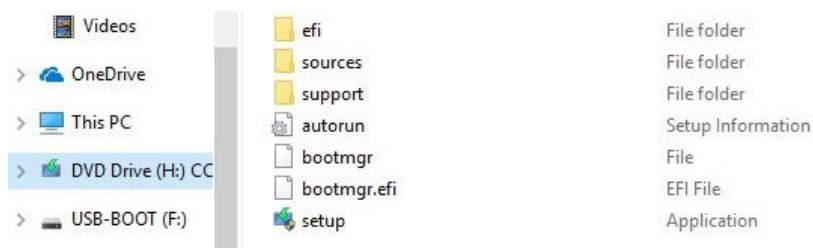

#### # 4. Upgrading through Windows 10 installation package

This way is also very simple, you do in turn follow the instructions below.

+ Step 1: Download the Windows 10 version you want to upgrade to, you can go [here](#) to download the original one!

+ Step 2: Mount the file to the virtual drive, if you are using Windows 8, 8.1 or Windows 10, you just need to double-click on the iso file (the windows installer) is done.

If you are using Windows 7, install the UltraISO software to create a virtual drive and mount the file to a virtual drive. Below are the files of Windows installer that have been mounted on a virtual drive.

+ Step 3: Run the Setup.exe file by double-clicking or right-clicking and selecting Run as administrator.

This time there will be 2 options for you as shown below. Choose Not right now if you're asked if you want to receive important updates. This option will make the process of upgrading to the latest Windows 10 version faster.

Click Next to continue.

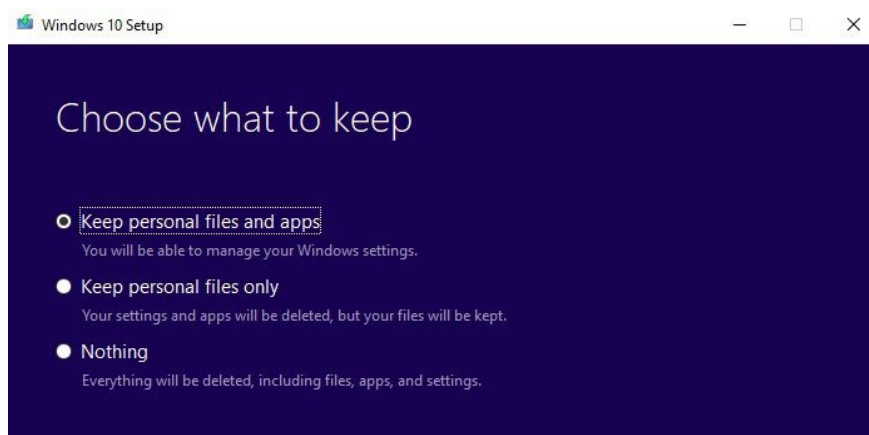

In the next window, select Accept to agree.

+ Step 4: If you are using Windows 10 operating system, there will be default options as shown below, click on the Change what to keep line for more options.

+ Step 5: This step is the most important step, so you should choose to suit your needs.

1. Keep personal file and apps: If you check this line, you will keep the old Windows operating system intact after the upgrade.
2. Keep personal file only: This option only keeps personal files. Installed apps and settings will be erased.
3. Nothing: This option will wipe the old Windows operating system, as if you were installing a new Windows. This means that the entire C drive (the drive containing the old operating system will be erased) and overwrite the new Win.

=> Please choose to suit your needs => then click Next.

Okey, now you just wait for it to run, set up a few more steps during the install process. Or if not, just click Accept, Next, Next is done.

Or if you want more specific settings, you can see the detailed instructions in this [Windows 10 installation guide](#) .

## # 5. Update through manual update packages

This way is also very good, instead of updating with the Windows Update feature available on the Windows operating system, you can use this instead.

Because the speed of Update through the update feature available on Windows is very slow, so to save time, you can follow this guide.

Perform:

+ Step 1: Check which Version of Windows you are in, to be able to identify the patch to download. You open the run dialog (Windows + R) => enter the command winver => will appear information as shown below.

+ Step 2: Access [this link](#) => patch appear on the left.

Please install newer patches by clicking on the patch you want to update (the content of the patch you can see in the right pane, google translate if you don't understand: D)

=> Then click on Microsoft Windows Catalog to get the link to download the update.

Windows 10 Version 1703

KB4015583 (OS Build 15063.138)

**KB4016251 (OS Build 15063.13)**

Windows 10 Version 1607 and Windows Server 2016
