

# How to Upgrade USB

USB stands for 'Universal Serial Bus,' a connection port system that connects external devices to the central processing system. You can upgrade USB to benefit from faster communication between your external devices and computer. Find out...

Method 1 of 1:

## Connecting a PCMCIA USB Adapter to Your Laptop

1.

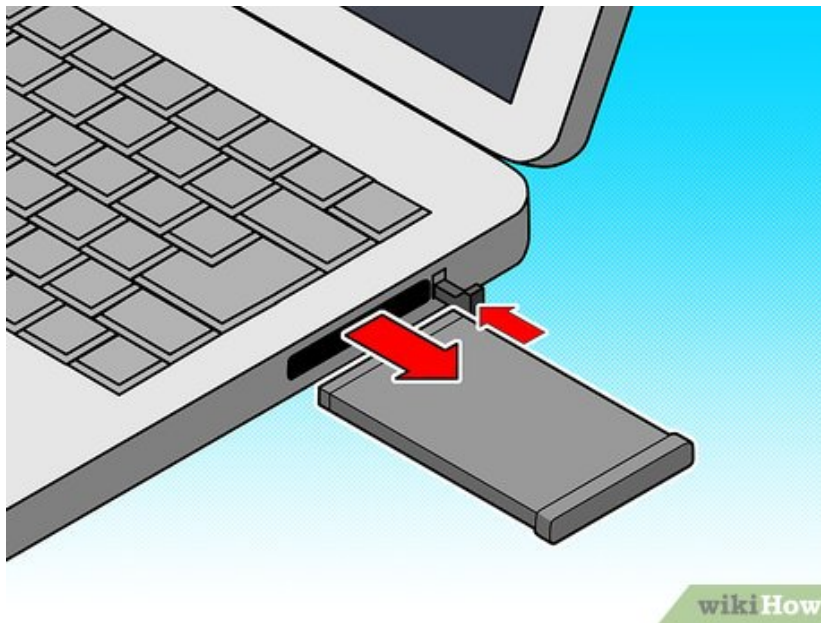

**Purchase a PCMCIA USB adapter with your desired USB speed.**

2.

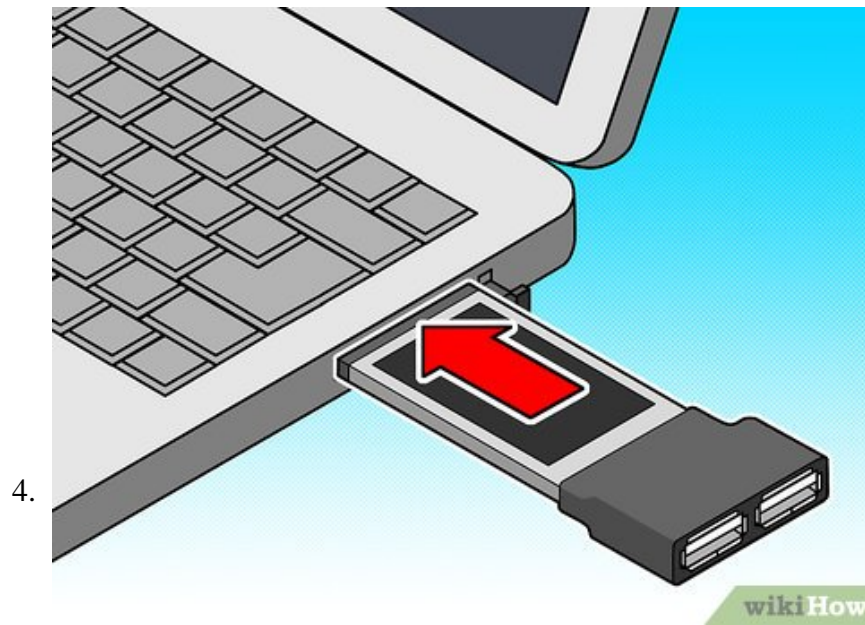

**Turn off your laptop completely.**

3.

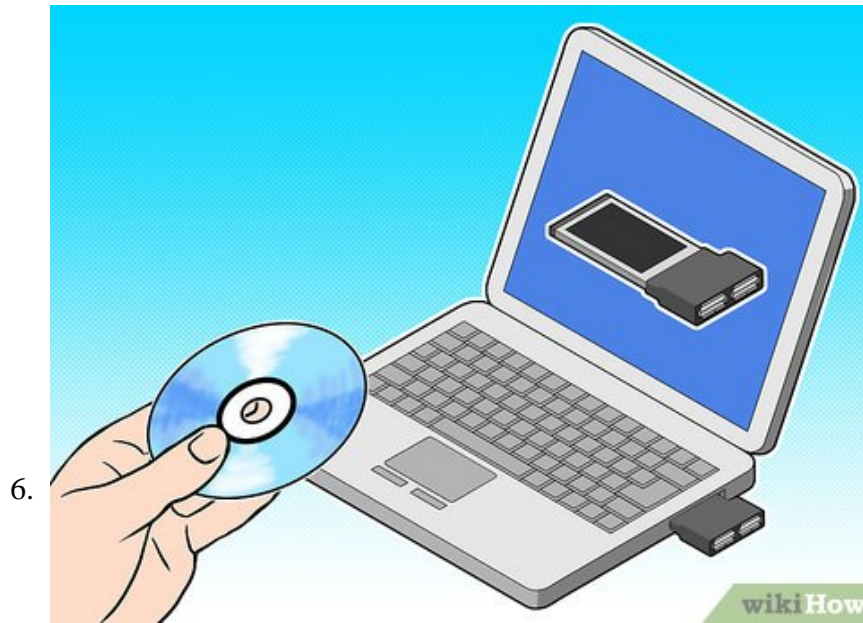

**Eject the PCMCIA slot cover by pressing the eject button at the side.** You may have to press the button twice.

**Insert the new PCMCIA USB adapter into the slot so that the USB ports face outwards.**

**Power on your laptop and wait until you see a message saying that a new device has been detected.**

**Install the driver and software that came with your PCMCIA USB adapter.**
