

# How to use AI Image Editor to edit photos with AI

To edit photos online, it's not difficult to find a tool you like with many different editing features. However, AI Image Editor is completely different as the website uses AI technology to edit images.

Simply put, you will enter content for the AI to confirm what you want to edit and then the tool will add images for you. The article below will guide you how to use AI Image Editor to edit photos.

## Instructions for using AI Image Editor to edit photos online

### Step 1:

We access the link below to go to the homepage of AI Image Editor.

<https://imgeditor.zmo.ai/products>

### Step 2:

At this website interface, users will upload images to the website by dragging and dropping or **clicking the Upload Image button** to upload photos.

### Step 3:

Next in the image editing interface, the user will hover over the image area they want to edit to delineate the area as shown below.

In case you circle the wrong area of the image, click on **the Restore icon** and then circle the wrong area again to remove it.

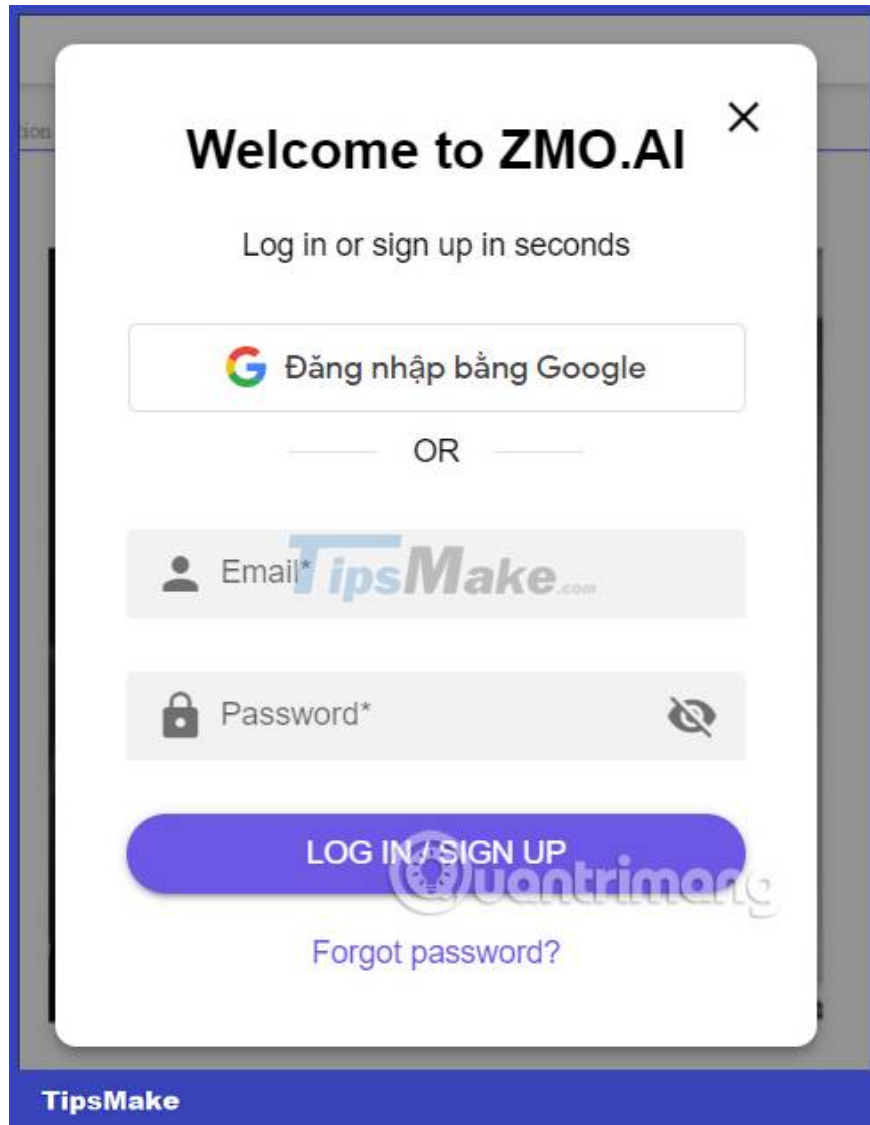

**Step 4:**

Next, **enter the content you want to add to the image area in English** in the Edit frame and then click **Generate** . For example, here we will add a brooch to the selected image area.

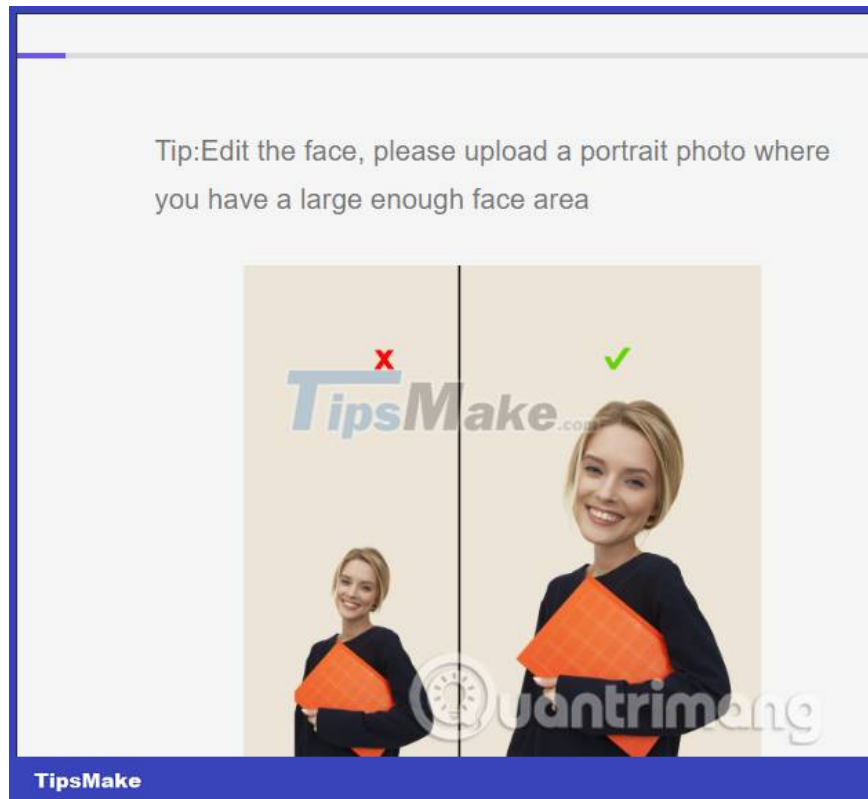

The website will now ask you **to log in to AI Image Editor** using your Google account.

### Step 5:

We wait a few seconds for the website to recognize the image and area that needs editing, scanning the content you enter to edit.

The result will be the image as shown below. The circled area has been edited based on your keyword we entered. You will have 2 photo results after editing. Whichever style you like, click the download icon to download the image.

The image is 1024×1024 pixels and has a watermark. With the resulting image, you can also click Edit to continue editing.
