Note before using the Aqua air conditioner control

Like many other air-conditioner brands, Aqua has launched many product lines, so its control is also very diverse. However, in this article we will help you know how to use the 2 most common types of controls.

In addition, during use, you should also pay attention to storage controls in a cool, dry place, and often pay attention to replace batteries when necessary.

How to use Aqua air conditioner AQA-KCR9JA

1. The name and meaning of the buttons on the Aqua air conditioner control AQA-KCR9JA

1. **ON / OFF button:** Turn on / off air conditioner.
2. **MODE button:** Select mode buttons.
3. **"+" And "-" Buttons:** Increase / decrease the temperature.
4. **FAN button:** Adjust the fan speed.
5. **Air reversing mode button (with wind icon) :** Adjust the flap fans up / down.
6. **CLOCK button:** Time adjustment button.
7. **Button TIMER ON:** Set the timer to open.
8. **AUTO CLEAN button:** Self-cleaning function
9. **TIMER OFF button:** Set the time to shutdown.
10. **TEMP button:** Set **indoor** temperature.
11. **LIGHT button:** Turn on / off the light.
12. **TURBO button:** Quick cooling mode, the machine will work with large capacity.
13. **SLEEP button:** Sleep mode.

2. The basic mode of Aqua air conditioner AQA-KCR9JA

Aqua Air Conditioner AQA-KCR9JA has the following operating modes:

1. **Automatic mode (AUTO):** When selecting this mode, you will not adjust the temperature but only adjust the speed and angle of fan blowing. It automatically measures the difference between outdoor and room temperature to manually adjust the appropriate temperature, giving you a pleasant feeling.
2. **Cool mode (COOL):** In this mode, the machine will condition the air and cool the room, and you can adjust the temperature and fan speed to get the most comfortable feeling.
3. **Drying mode (DRY):** The machine will absorb moisture in the room, helping the air dry and cleaner.
4. **Fan mode (FAN) :** With this mode, the machine will both cool and combine with the reversing fan to let the air in the room be ventilated.
5. **Heating (HEAT):** This heating mode is only available in 2-way Aqua air conditioners.

3. How to adjust the time and timer settings

You can set the time by:

1. Press the CLOCK button on the remote to start changing the time, this time the screen will show flashing icon.
2. Press "+" or "-" button for about 5 seconds to set the time. Each time you press that button, the time will increase or decrease 1 minute, hold down after 2 seconds, the time will be quickly changed.
3. Press the CLOCK button again to confirm the set time.

How to set the timer:

1. Press TIMER ON or TIMER OFF to start timer setting on or off.
2. Press the "+" or "-" button to increase or decrease 1 minute, then hold the "+" or "-" button for 2 seconds, the time will change until your installation requirements are met.
3. Press TIMER ON or TIMER OFF again to cancel the installation.

Note:

1. You can set 2 modes to turn on or off at the same time and the timer up to 24 hours.
2. Before setting the timer, you need to set the time for the remote to match the actual time.
3. After starting the CLOCK button, the control will turn on or off according to the scheduled time. The ON / OFF button does not cancel the setting. When you do not need this function, you use the control to cancel the command.

How to use Aqua air conditioner control KCRV-WJB series

1. The basic buttons

1. TURBO button: High power operation.
2. Yellow "power" button: Start the phone.
3. COOL button: Cooling mode.
4. AQUA FRESH button: Cleaning mode.
5. DRY button: Dehumidification mode.
6. SWING button: Adjust the wind fan.
7. FAN button: Fan mode.
8. SLEEP button: Sleep mode.
9. QUIET button: Super static mode.
10. TIME button ON: Timer to turn on the machine.
11. TIME OFF button: Timer to shutdown.
12. LOCK button: Button used to lock the controller.
13. LIGHT button: Turns on / off the information on the LCD screen of the indoor unit.
14. RESET button: Restore original settings.
15. TEMP button ↑: Increase the temperature.
16. TEMP button ↓: Reduce the temperature.
17. CONFIRM / CANCEL button: Confirm / cancel.

2. How to set the timer

The timer of the air conditioner will allow you to take the initiative in the time of turning on and off the machine.

1. **On / off timer:** You press the TIME ON or TIME OFF button and select the desired time, then press the CONFIRM / CANCEL button to complete.
2. **Timer settings:** After each press of the time setting button will increase by 0.5 hours for the first 12 hours. After 12 hours of installation, the time will increase by 1 hour.
3. **Exit:** Press CONFIRM / CANCEL repeatedly until the display time disappears.

3. How to use the cooling mode

Aqua air-conditioner is designed for cooling at ambient temperature of 18 - 43 ° C.

1. Press COOL to open the mode.
2. Press TEMP ? or TEMP ? to adjust the temperature appropriately.

4. Use the automatic cooling of radiator rig

With this feature, the machine will be able to automatically clean dirt, bacteria, mold and deodorize effectively. After you press the AQUA FRESH button, the heat sink of the machine will automatically clean up within 20 - 30 minutes and finishes after you hear a "beep".

5. Adjust the wind impeller

This function allows you to adjust the propeller up and down as desired.

1. Press the SWING button to start the wind turbine adjustment option.
2. Press the SWING button again, the vertical air vane will stop at that position and the automatic wind function will cancel.

6. High operating mode and super static mode

TURBO mode will help the room to be cooled extremely quickly, thereby saving time effectively, while the QUIET mode will help you have a good night's sleep.

1. Press TURBO to set high operating mode or press QUIET to set super static mode.
2. Press TURBO or QUIET again to exit and the fan speed will return to its original state.

Note: This function is only applicable for cooling mode.

Manual air-conditioning, energy-saving Aqua air-conditioner

A few notes below will help you be able to use Aqua air conditioner most effectively and save energy:

1. Maintenance, cleaning air conditioning periodically.
2. Do not use the air conditioner all day.
3. Do not set the room temperature too low or too different from the outdoor temperature.
4. It is advisable to turn on the air conditioner at low temperature for about 10 - 15 minutes, then adjust to the appropriate temperature (about 25 - 27 degrees Celsius) before use.
5. Should use additional fans and humidifier in the room.
