

# How to use Any Sound Recorder to record on Windows 10

Any Sound Recorder is a new recording application on Windows 10, saved in a variety of audio formats.

Although Voice Recorder recorder is available on Windows, the recording features are still limited, only at basic recording. For many people with higher recording needs, look for recording applications such as Any Sound Recorder. The application can record voice from personal microphones, or from other audio devices. The saved audio format that Any Sound Recorder supports includes m4a, mp3, wav, more than the audio format supported by Voice Recorder. Audio recording on the app is customizable such as renaming or cutting audio. The following article will guide you how to use Any Sound Recorder recording on Windows 10.

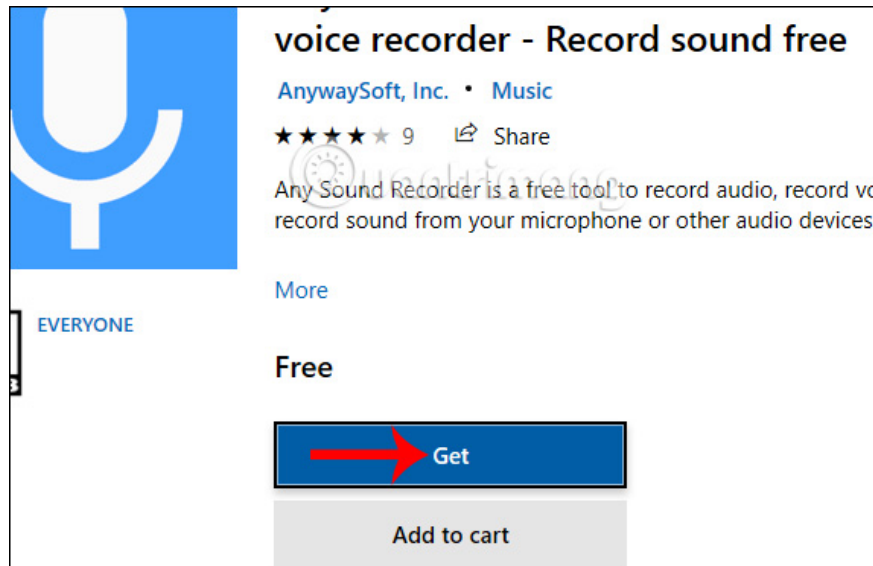

1. Recording software on the computer
2. How to record using Audacity on a computer
3. How to use Screen Recorder Plus to record and record videos on Windows 10
4. The best recording app for Android

## Recording instructions on Any Sound Recorder

### Step 1:

Users click on the link below to install the Any Sound Recorder application on Windows 10.

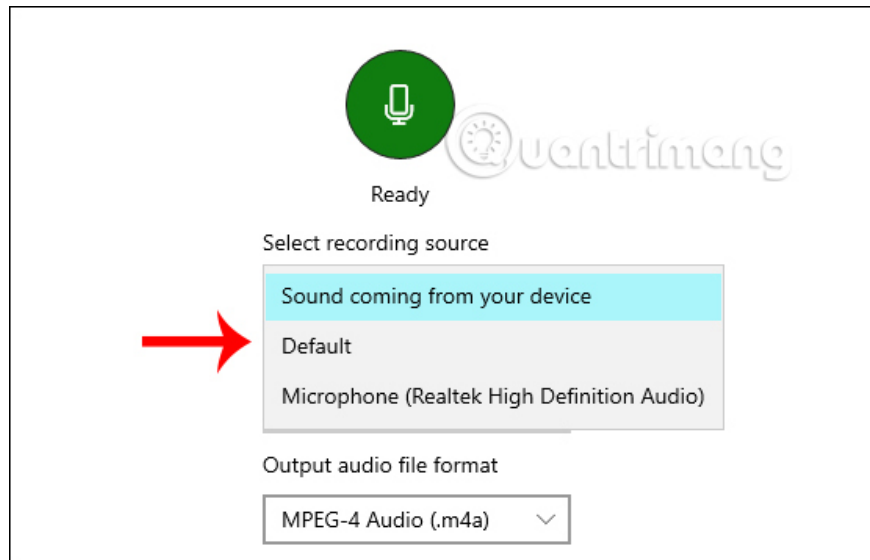

1. Download the Any Sound Recorder application

## Step 2:

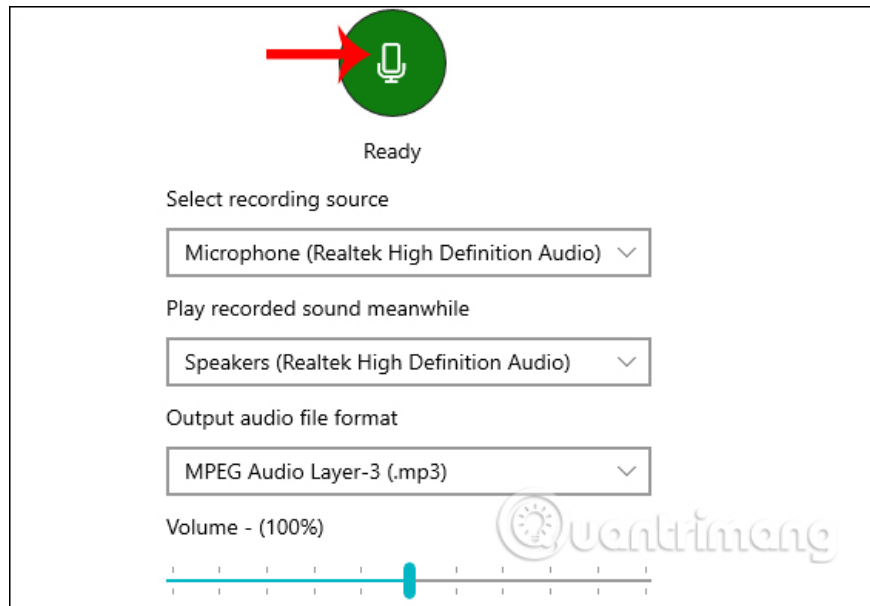

After installation is complete, we start the application. At the Any Sound Recorder interface, users need to reset the recording mode. At **Select recording source** you select the source to record from:

1. Sound coming from your device: Record audio from your device.
2. Microphone: Record audio from a microphone.

1. Play recorded sound meanwhile: if you choose a microphone source, choose Speakers.
2. Audio output file format: select the save format for audio recording.
3. Volume: customize audio volume level.

Once set, click **the Ready button** to proceed with the recording.

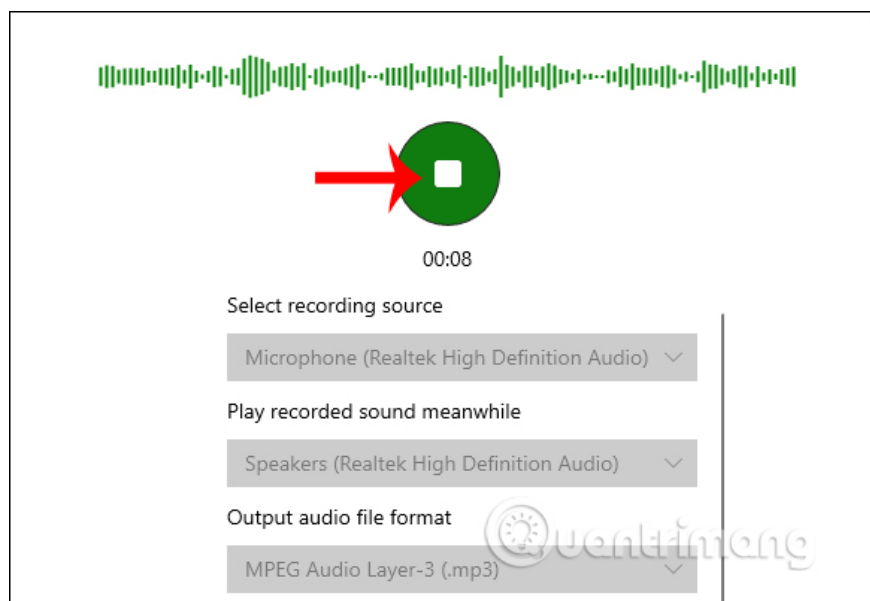

### Step 3:

Then we need to agree to the **application to use the microphone on the device** , press OK.

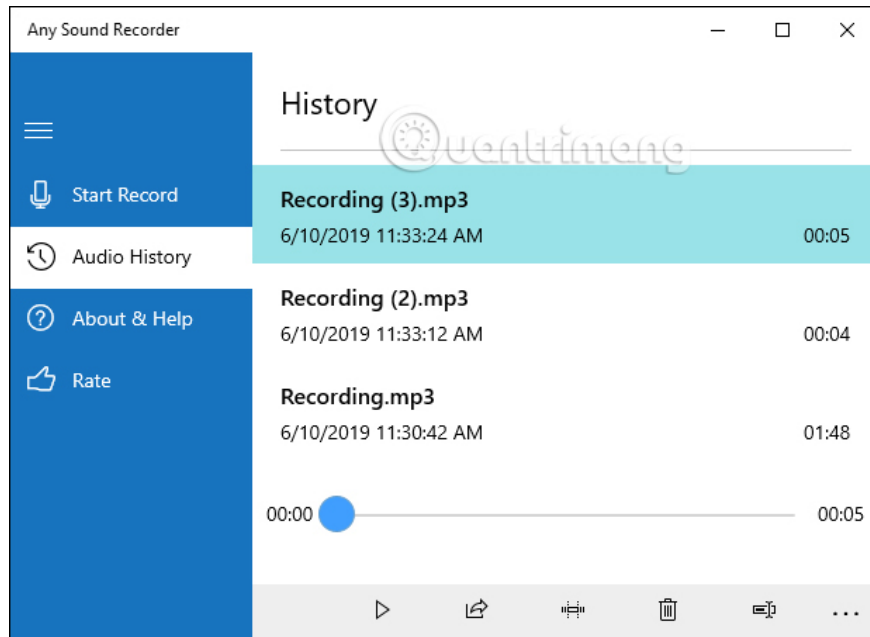

The audio recording process takes place immediately afterwards. Audio recording time displayed on the screen. To stop recording, click on **the Stop icon** .

#### Step 4:

Users are immediately transferred to **the Audio History interface** to review all recorded audio tracks. Sound clips are recorded in detail about the recording date, recording time. To continue recording, click on Start Record.

#### Step 5:

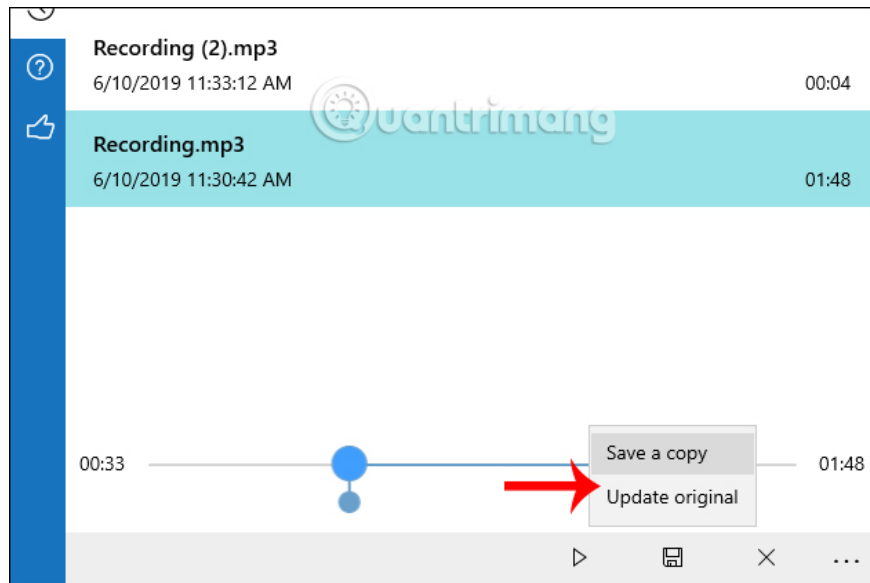

In this interface we listen to the audio file again to adjust it if desired. Below are the tools used to edit audio files.

If you want to **cut the sound**, click on **the Trim tool**, then select the audio track you want, by moving the 2 ends of the circle, then **click Save** below to save it. We have 2 options: save under copy (Save a copy) or

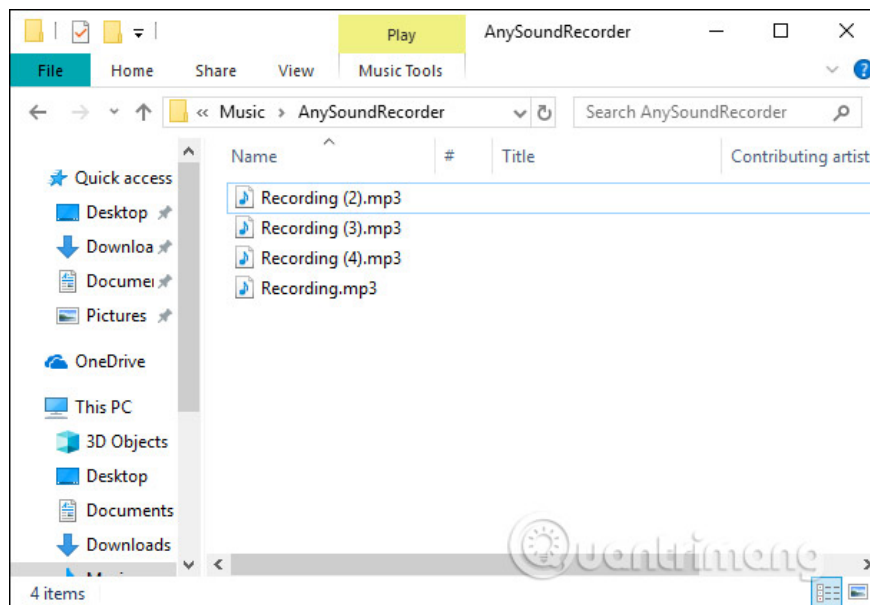

overwrite the original file.

If saved as a copy, a new recording file is created.

### Step 6:

The recorded audio files will automatically save to **the Music > AnySoundRecorder folder** .

Any Sound Recorder has a very simple usage that is not too complicated. The audio recording on the application has additional retouching as you like.

I wish you all success!
