

How to use Auto Click, automatic mouse click effectively

Auto Click is a useful tool that helps you automatically click the mouse without manual operation. This software is especially suitable for gamers or those who need to click continuously while working. Let's learn with TipsMake how to use Auto Click most effectively.

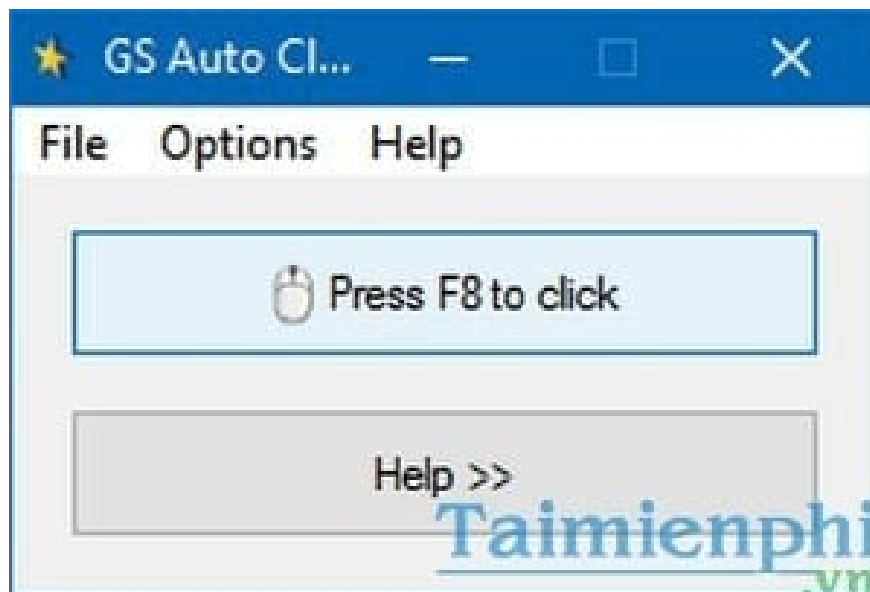

Learn how to use Auto Click to automatically click your mouse while playing games or working. Detailed instructions help you optimize every operation.

How to use Auto Click

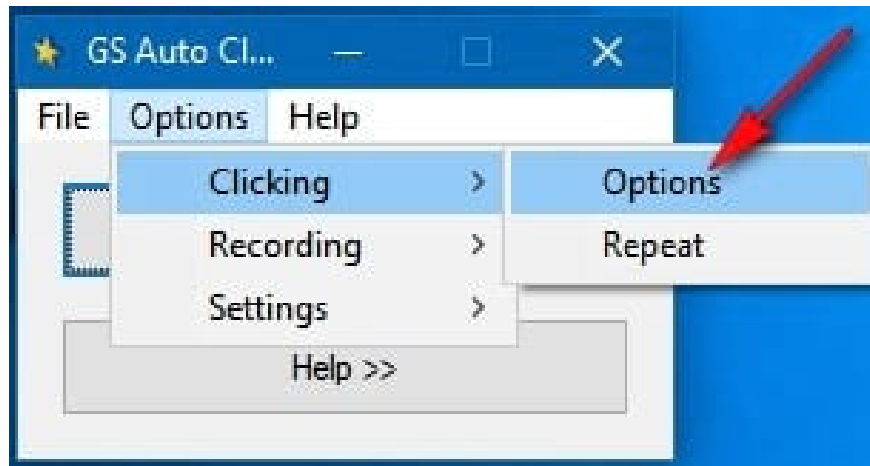

Step 1: Download and install the software.

=> **GS Auto Clicker** download link .

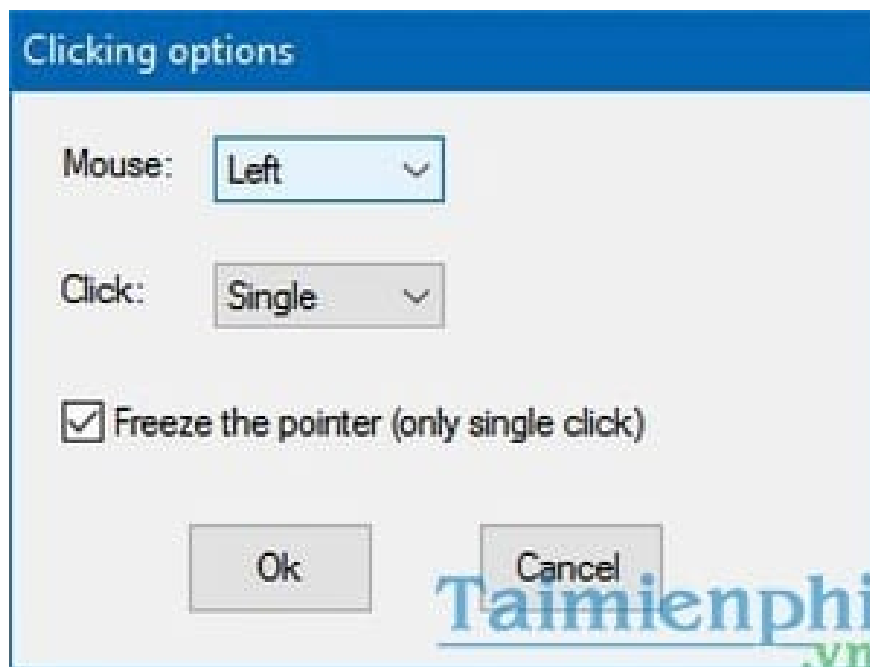

Step 2: Launch the software, at the main interface you can perform the automatic mouse click operation with the **F8** key to **start/stop** according to the default setting of automatic left mouse click.

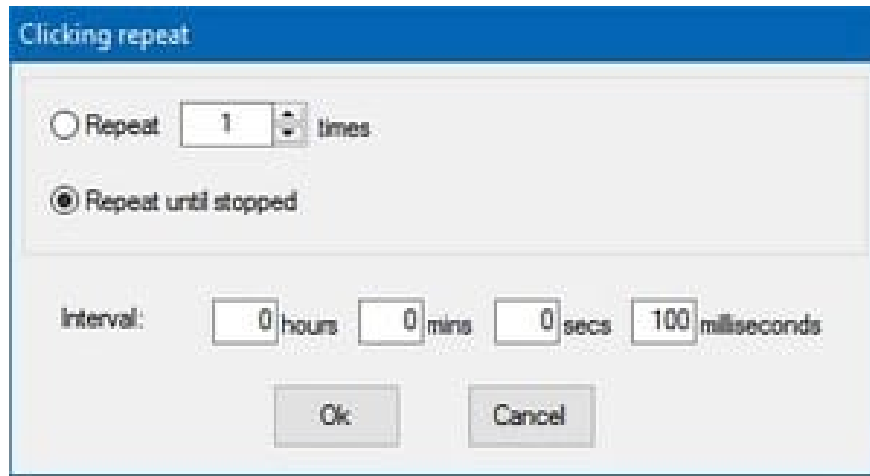

Step 3: To change to right-click or middle-click (mouse scroll) select **Options** -> **Clicking** -> **Options** .

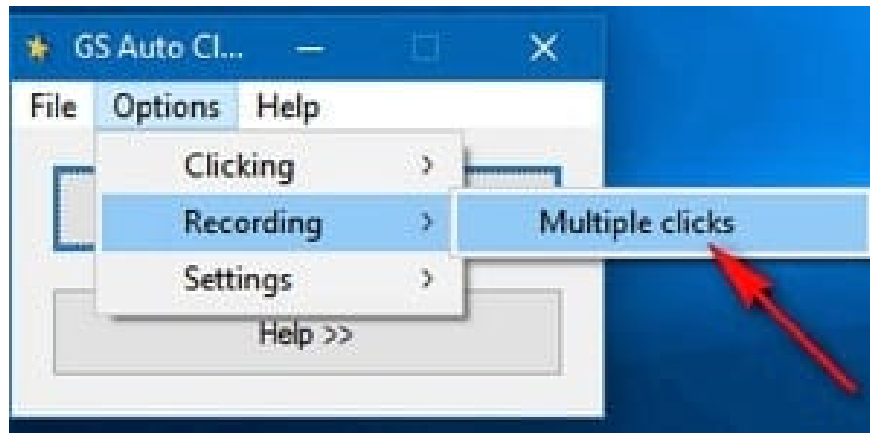

Step 4: Here, the **Mouse** section allows you to change the **Left** , **Right** and **Middle** mouse clicks, and the **Click** section allows you to select **Single** or **Double** . The **Freeze the pointer (only single click)** option allows you to freeze the mouse when performing auto-clicking (only for single clicks).

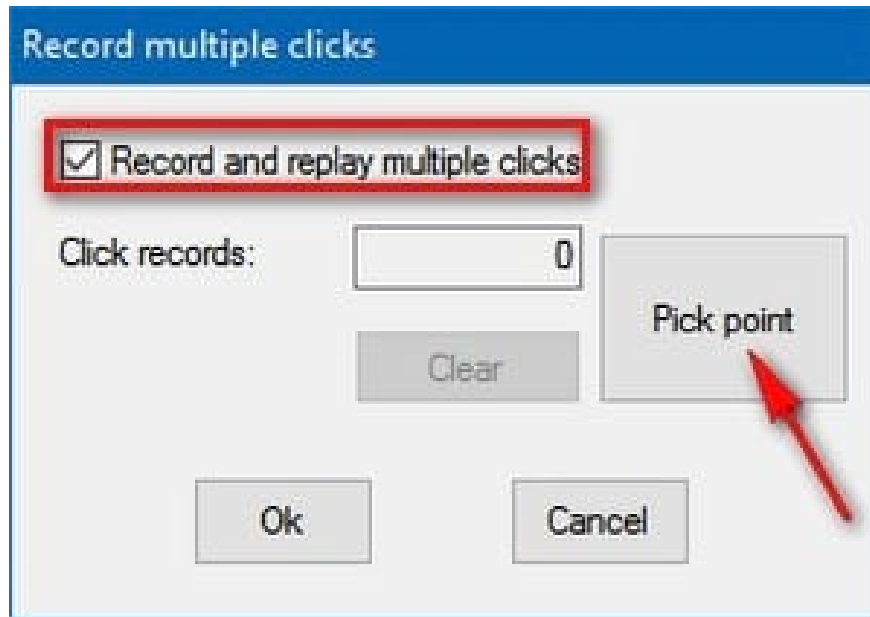

Step 5: To perform clicks a certain number of times, from Options -> **Clicking** -> **Repeat** . Here you check the **Repeat** option and set the number of clicks or **Repeat until stopped** to set the click until you request to stop. The **Interval** section allows you to enter the interval between each click.

Step 6: If you want to perform multi-point clicking, clicking on multiple locations at the same time, go to **Options -> Recording -> Multiple clicks** .

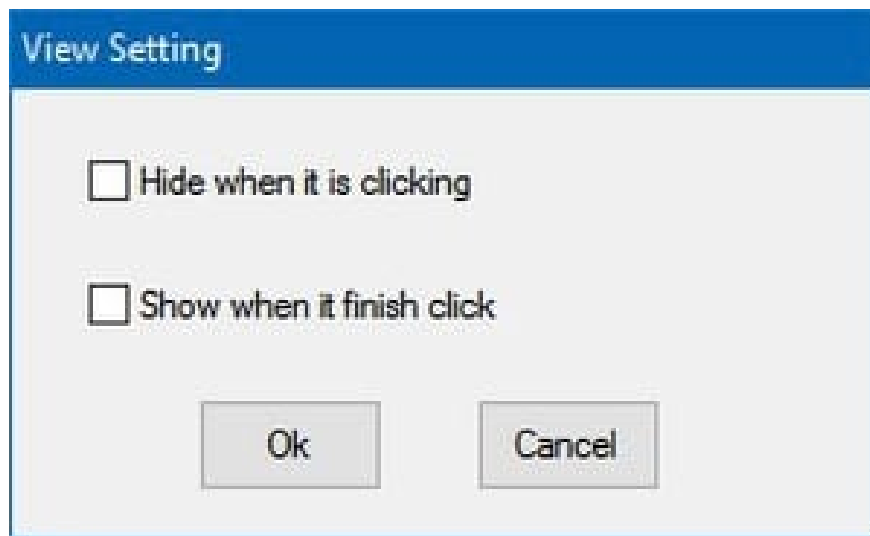

Step 7: In the **Record multiple clicks** window , check the **Record and replay multiple clicks** box , then click on **Pick point** and click on any point on the screen so that the tool can automatically record the click location, repeat the same action for other coordinates that need to be recorded. The **Click records** section will display the number of locations where you have set up multi-point clicks. After setting up, click **Ok** to save the changes.

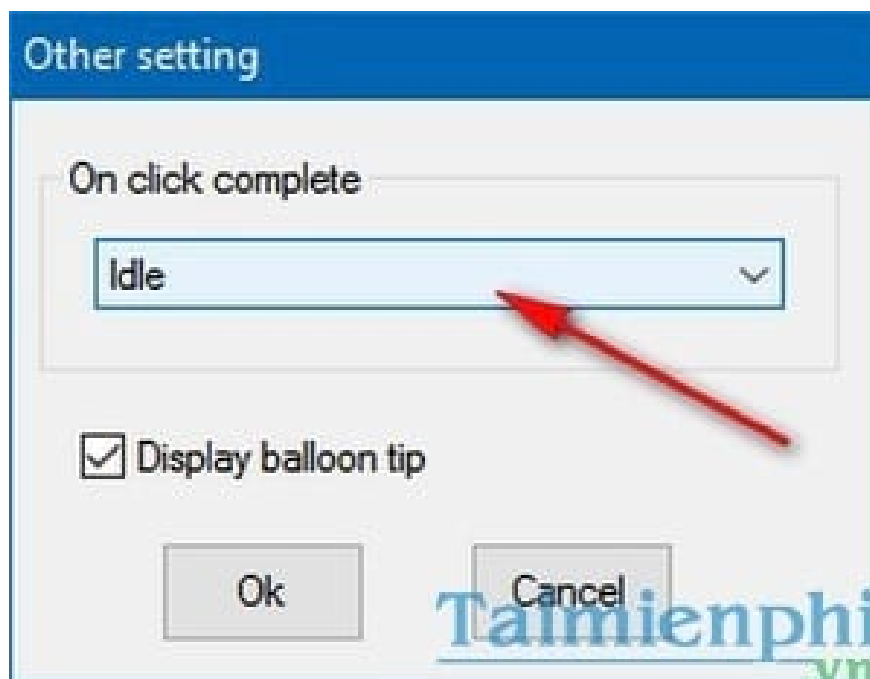

Step 8: If you feel that the Start/Stop shortcut key is F8, which overlaps with another shortcut key, you can change the Hotkey shortcut key from **Options** -> **Settings** -> **Hotkey** . Here, click on the **Click/Stop** box and press the hotkey you want to set up, then press **Ok** to complete.

Step 9: Select View Settings from **Options** -> **Settings** -> **View** to allow you to set 2 options:
Hide when it is clicking : Hide the window when automatically clicking
Show when it finish click : Show the window when stopping clicking/clicking completed.

Step 10: To set up shutdown or other actions after clicking complete, from **Options** select **Settings** -> **Other** . In the Other setting window, click on the drop-down menu below On click complete and select settings such as **Idle** (standby mode), **Quit** (auto exit), **Lock computer** (lock computer), **Log off computer** (log out), **Turn off computer** (shut down computer), **Standby** and **Hibernate** for the computer.

After setting up Auto Click, you can press the hotkey to start auto-clicking, which helps reduce hand operations and better protect the mouse. If you need a similar tool, you can try **GS Auto Clicker** , a software that supports auto-clicking with simple usage.
