3. Press the TIMER button again to complete the setup.

### **How to turn off timer**

If you want to turn off the installed timer, just press the TIMER button one more time.

How to adjust the Casper air conditioner control is quite simple

## **Instructions on how to use Casper air conditioner effectively and save electricity**

How to use Casper air conditioners safely, effectively and save electricity? Our notes below will help you answer this question:

1. You should turn on the air conditioner about 10 to 15 minutes before use.
2. Do not set the temperature too much differently than the environment because this will cause the air conditioner to work harder, leading to more power consumption and can also affect your health. According to experts, the ideal temperature level that you should set when using air conditioning is from 25 to 28 degrees Celsius.
3. You should close the doors while the Casper air conditioner is turned on to avoid heat loss and wasting electricity. However, you do not need to close the door too tightly because it will cause the room to be filled with air, affecting your health.
4. Use additional fans and humidifiers in air-conditioned rooms.
5. Using DRY mode and off timer mode is also a way to help you save electricity when using air conditioning.
6. Do not use air conditioning all day.
7. Regularly clean and periodically maintain the air conditioner.

You should use a mist sprayer to create a humidifier in the air-conditioned room

Hopefully the way to use Casper 1-way and 2-way air conditioners that we have shared will help you and your family get optimal results from this device. Thank you for your interest and following the article!
